123 California St., S. F., Cal.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and on liberal terms. Address J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, Household, Storehouse, Domestic Animals, etc., with Remedies for their Extermination,

By MATTHEW COOKE,

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewar & Co., publishers, 220 Market St., San Francisco.

Gabilan Rancho,

Containing 7665 acres, situated near Salinas City, Monterey County, is offered for sale. For particulars address J. C. HOAG, 312 Van Ness avenue, San Francisco, or TYLER BEACH, San Jose, Cal.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

SUGAR BEET SEEDERS.

I am prepared to furnish the most approved kind of Beet Seeding Machines for the use of those who contemplate sowing beets for sugar. I have made those used by the Alvarado Beet Sugar Company for several years past, and in fact designed and developed them, in connection with the superintendent of that concern. I am now making a number for Mr. Claus Spreckels, and should be glad of further orders. Orders should be given one month before the machine is wanted. Capacity from five to eight acres per day. Price \$150. Address

JACOB PRICE,
San Leandro, Cal.

Thermalito Colony Comp'ny

INCORPORATED DECEMBER 31, 1887.

THE HOME OF THE ORANGE, OLIVE, VINE & FIG.

— ONLY —

429 LOTS LEFT. 429 LOTS

In this famous Colony Tract out of 1440 lots offered for sale June 8, 1887, and but 250 lots remaining in the Association in which an investment of only \$360 is SURE to secure you an admirable town lot 50x150 feet, and may secure a HOTEL now being erected at a cost of \$20,000. Eleven chances to secure a cottage worth from \$875 to \$2500; ten chances for 10-acre lots; 90 chances for 5-acre lots; 50 chances for 2-acre lots; 50 chances for 1-acre lots; 100 chances for lots 90x160 feet, and 200 chances for lots 50x150 feet. Terms easy; \$30 cash and balance in monthly installments of \$15.00 per month.

THERMALITO

Offers the following advantages which no other Colony offers:

1. The most healthy location in Butte County, outside of the mountains. This is substantiated by the fact that a location for the Butte County Infirmary was selected there by prominent and well-posted citizens.
2. The soil cannot be surpassed for fruit culture, being a rich, red, gravelly loam, strongly impregnated with mineral and from 6 to 20 feet deep, and has 10,000 flourishing orange trees from one to ten years old on the tract.
3. Its water supply and facilities are unequalled, its supply being 3600 inches, and conducted in PIPES on the tract under a pressure of from 75 to 150 feet, which is sufficient not only for irrigation, but for fire and household purposes. This water is furnished FREE FOR THREE YEARS, and after that at the low rate of ten cents per inch (miners' measurement) for 24 hours.

4. The value of the land is rapidly increasing. It is now offered at \$100 per acre, while much of it has been resold at \$150. The owners of the tract cannot raise the price above \$100 without violating their promise made to the public six months ago, and they have steadfastly refused to break any promises, no matter how the boom may affect the land. Terms of sale: One-third cash, one-third in one year, and one-third in two years at 8 per cent per annum.

5. The Company is spending over \$100,000 in improvements of their own money, and hesitate at no outlay that will prove advantageous, and FURNISH LABOR on the tract for purchasers, and will plant and care for your groves at cost.

6. The location of the tract for scenery is unsurpassed. It has gained the name of "THE BEAUTIFUL," and justly so; it is also called "Wonderland."

All we ask is to COME AND SEE for yourselves. The Company is at all times ready to take you to the tract, and invites inspection. Address

THERMALITO COLONY COMPANY, Oroville, Butte County, California.

LITTLE'S CHEMICAL FLUID NON-POISONOUS

SHEEP DIP.

One gallon, mixed with 60 gallons of cold water, will dip thoroughly 180 sheep, at a cost of 1 cent each. Easily applied; a nourisher of Wool; a certain cure for SCAB. Also,

LITTLE'S PATENT POWDER DIP. (POISONOUS.)

Mixes instantly with water. Prevents the fly from striking. In a 2 pound package there is sufficient to dip twenty sheep, and in a 7-pound package there is sufficient to dip one hundred sheep.

NO SECOND APPLICATION!

The parties who have used our New Cleanser write us that they
are surprised at its staying qualities. The scale, the aphids, etc., do
not like to go back again where it has been used. It makes a
RESISTANT STOCK of the tree.

After two years' experience, we have to announce that there has
not a single case come to our knowledge where the Woodbury Tree
Cleanser has not fully and satisfactorily accomplished everything
that has been promised.

By reference to a late report from Prof. Klee, we observe he
states that he has found very good results from it in almost every
case, and that he has encountered no occurrence of any injury from its
use. We are informed that it has his recommendation as a thorough-
going, successful and cheap Winter Wash; and it is certainly in-
dorsed by the leading orchardists in the State. [Please send for
their published letters.]

It has had an unexampled success in exterminating Scale on
all kinds of Fruit Trees. It is sent all ready for use, and instruc-
tions, which are very simple, are furnished with every package.

Price 3½ cents per pound in cases, 80 pounds in a case; in
8-pound cans, same price, 15 cents extra for can; 3½ cents per
pound (10 per cent off) in barrels; about 400 pounds in a barrel.

We also make a fine

ROSIN WASH,

Containing no Kerosene, perfectly harmless and thoroughly suc-
cessful. This is the valuable remedy strongly recommended by
Prof. Klee for the Cottony Cushion Scale or "Icerya." Price ½
cent per pound higher than the Woodbury Tree Cleanser. We also
manufacture the fine Anti-gumming Farm Machine Oils and gen-
eral Lubricating Oils. We respectfully solicit correspondence.

WOODBURY OIL COMPANY,

123 CALIFORNIA STREET,

SAN FRANCISCO, CAL.

THE "BOSS" ROAD MACHINE.

FOR BUILDING ROADS, MAKING DITCHES, LEVEES, Etc.

Is strong and durable, of light draft and of great strength. Just the thing for farmers in
opening ditches through their grain fields. Sold by

THOMAS D. POOLE, State Agent,
1906 San Antonio Avenue, Alameda, Cal.

Reliable Agents Started in Business Without Capital!

We are shipping large numbers to the Pacific Coast for destroying Worms on Fruit
Trees. One party has had 20 dozen within a few weeks.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING FEBRUARY 7, 1888.

- 377,553.—ELECTRIC GAS LIGHTER—Julius Finck, S. F.
 377,384.—STATION INDICATOR—E. S. Irvin, Berkeley, Cal.
 377,503.—BRIDLE WINKER ATTACHMENT—E. B. Knapp, San Jacinto, Cal.
 377,525.—SEWING MACHINE—M. Lachman, S. F.
 377,527.—CABLE RAILWAY GRIP—D. S. Mackey, S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

A Miner's Inch.

We have heretofore explained what is meant by a "miner's inch" of water; but for the benefit of new-comers and others who do not understand the phrase, we reprint the following facts and figures, which F. P. McCray, Engineer for the San Luis Rey Flume Co., lately furnished the *Oceanside Star*:

One miner's inch per second equals .02 cubic feet, or .1496 gallons.

Same per minute equals 1.20 cubic feet, or 8.976 gallons.

Same per hour equals 72 cubic feet, or 538.56 gallons.

Same per day equals 1728 cubic feet, or 12,925.44 gallons.

Same per month equals 52,596 cubic feet, or 393,418 gallons.

A miner's inch will flood 10 acres per year, 1.45 feet deep; or 14.49 acres one foot deep; or 18.11 acres 9 inches deep.

ONE MIDDLEMAN LEFT OUT.—A contributor to the N. Y. *Tribune* tells how a Wisconsin farmer suspected that he did not get full value for butter sold to the village grocer. When he went to Milwaukee, where his butter was re-tailed, he asked the commission merchant to whom he knew his grocer shipped to let him see some butter. He was shown some, but after examining it said it was not good enough. He was then shown a somewhat more desirable sample. Even this did not suit the farmer, who said if they had no better butter he would not buy. "Well," was the reply, "we have some choice butter in here, but this comes ten cents a pound higher, and you may not be willing to pay that difference." The farmer at once recognized his own package, told the commission merchant the object of his visit, and contracted to sell him all his butter at a price which would induce him to turn his whole land into a dairy farm.

TO CHEAPEN CANS.—The following petition, signed by nearly all the leading canners of the coast, was telegraphed to the Pacific Coast Congressmen on the 13th:

We most respectfully petition you to use your best endeavors to have the duty on tin plate removed. No tin plate being manufactured in this country, it ought to be placed on the free list.

The consumer of canned goods is one of the direct losers through such unnecessary tariff, also the fruit-growers and canners suffer materially, as a removal of the unnecessary duty would undoubtedly result in larger consumption of canned goods throughout this country, and consequent larger demand by the canners for the products of our orchards.

CHOLERA FOR RABBITS.—It is reported that Pasteur's plan for exterminating rabbits has been tried in a field near Rheims, France, with marked success. The field was walled in and full of burrows. The gun and the ferret had been vainly tried. M. Loir, nephew of M. Pasteur, went down and poured on a truss of hay some broth full of the microbes of chicken cholera. The next day 19 dead rabbits were found, and two days later 12 more. In some of the burrows were discovered families of dead rabbits, and not one living rabbit has since been seen.

SUNFLOWER FUEL.—The Maxwell *Argus* wants somebody to make a practical proof of what has been asserted as to the stalks and seeds of sunflowers making good cheap fuel. Bro. Mathews says: "If some enterprising farmer will plant an acre or two this year we will be obliged, and will buy our firewood from him. The method is to sow broadcast, and when the plant is fully grown cut before it gets hard, in proper lengths. One acre will yield an equivalent of 10 cords of wood, which means \$60 in this country. Try it somebody."

HOPES OTHERS TOO WILL TAKE IT.—A Butte county reader of the *RURAL* writes: "I received an extra copy this week, which I will hand to some good neighbor, hoping he may subscribe for the best farmer's and best horticultural paper extant."

BUTTE GRAIN.—All summer-fallow grain was looking finely in this county when W. A. Shippee of Nelson wrote us on the 10th inst.

SAN DIEGO AND NATIONAL CITY complain of a scarcity of lime and a superabundance of foot-pads.

Rural Seed Offering—1888.

Great Inducements for New Subscriptions.

The Sour Orange Tree and Its Products.

EDITORS PRESS:—The Sacramento Improvement Association commends very highly the sour oranges as avenue trees, and rightly it does, because there is no other tree as ornamental as the sour orange. But it is not only ornamental, it is very useful also.

The traveler in the so-called Paradise of Europe, the coast of the Mediterranean between Genoa and Cannes, will be surprised in coming in the district of Grasse, to see there in fall innumerable clotheslines hung up on which the skins of oranges are dried, while the pulp of these fruits is lying in out-of-the-way places, where large piles of tens of thousands of oranges will rot for manure. He hears then that these are sour oranges. Their skins are used by the more than 50 perfume factories of Grasse, as well as the blossoms, of which an Italian proverb says: "The orange blossom is the king of all blossoms."

A sour orange tree usually bears three times as many blossoms as it is able to bear fruits, and therefore two-thirds of them are picked and sold to gardeners, druggists and the perfume factories, which use the blossoms and then the skins for powders, oils, pomades, extracts, molasses, liquors, confections, candies, etc., some of which products are very valuable. One gallon of an oil for instance (Neroli bigarrade) is sold for \$300. The factories of Grasse consume during the period of distillation in the month of May, 30,000 pounds of orange blossoms a day.

As soon as there will be in California a supply of sour orange blossoms and skins it will not be long before factories will be erected, because in America as much and more perfumes and confections are used than in any other country.

Auburn, Cal.

F. CLOSE.

Shippers' Association.

At a meeting of the California Fruit and Produce Shippers' Association, held in Los Angeles last Wednesday week, officers were elected for the term ending Jan. 1, 1889, as follows: E. Germain, Pres.; E. R. Skelley, 1st V. P.; E. T. Earl, 2d V. P.; C. J. Shepherd, Treas.; Gregory Perkins, Jr., Sec.

The weight of a box of Navel oranges was fixed at 65 pounds instead of 70 pounds as heretofore.

The following article of the by-laws was unanimously adopted, and a printed copy ordered sent to all the wholesale fruit and commission dealers in the United States:

Article VII, Section 1. All sales must be made f. o. b. California, and at not to exceed 30 days' time.

Sec. 2. The packer's responsibility to cease after fruit is loaded on cars in good merchantable order, and purchaser must assume all risks of weather, delays and accidents in transit.

Sec. 3. Any dealer who refuses to receive and pay for fruit or produce, after same has been loaded in California in good merchantable order by any member of this association, shall be blacklisted, and all members of this association shall refuse to supply said dealer on any terms until he has made satisfactory settlement.

Sec. 4. Should suit be brought by any member of this association to enforce payment for fruits, or other California products, sold on terms above named, this association pledges itself to stand the expense of said suit, provided that all disputes between members of this association and dealers are submitted to a committee on arbitration provided in the by-laws, before any dealer can be blacklisted or suit can be brought at the expense of the association.

HANDSOME INDEED is Burpee's "Farm Annual" for 1888. Its 128 pages seem to be jammed full of information about seeds for the farm, kitchen and flower gardens, while the scenes depicted on the covers, and the full-page colored plates of defiance pansies and novelties in the vegetable line, are pretty enough to be framed for home adornment. To see this catalogue, send your address to W. Atlee Burpee & Co., Philadelphia, Pa.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

No Second Application.

This does not refer to small boys, but to the Woodbury Tree Cleanser. This fact makes it the cheapest wash for trees in the world. See advertisement.

HORSE AND CATTLE SALE.—We wish to direct the attention of stock-breeders and horse-men to the great sale of Aberdeen Angus cattle and French draft stallions, advertised by Messrs. Perry and Matthews, to take place March 7th at the Bay District park.

ROSES AND ORNAMENTAL PLANTS.—That old, experienced nurseryman and prize-taker, John Saul of Washington, D. C., has sent us his descriptive catalogues of roses, and of new, rare and beautiful plants for the spring of '88. They are free to applicants.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KORBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

DR. J. KORBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

S. H. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 15, 1888.
The rains the past week were very opportune, as is the clearing weather at this writing. The rainfall to date, in the agricultural districts, does not average as heavy as last year to like time, so that it is more needful that well-distributed rains are had in next month and April. Trading the past week in farm products was light. The English wheat market ruled steady up to Monday, when a stronger tone was reported. The following is to-day's cable:

WHEAT—Buyers hold off. California spot lots, 6s 6d to 6s 9d; off coast, 33s 6d; just shipped, 33s 9d; nearly due, 33s 6d; cargoes off coast quiet but firm; on passage, quiet but steady. Wheat on passage to Continent, 165,000 qrs; wheat and flour on passage to U. K., 1,432,000 qrs; weather in England, cold.

Eastern Wool Markets.

BOSTON, Feb. 12.—Wool is steady, Ohio and Pennsylvania extra fleeces, 30¢; 31¢; XX, 31¢; 32¢; XX and above, 32¢; 33¢; No. 1, 35¢; 36¢; Michigan extra, 28¢; 29¢; No. 1 combing, 37¢; Ohio fine delaine, 34¢; 35¢; Michigan do, 32¢; 33¢; unwashed combing, 25¢; 26¢; Territory wools, scoured, medium, 48¢; 50¢; fine medium, 52¢; 53¢; fine, 54¢; 55¢; Texas wools, 14¢; 20¢; other grades unchanged.

PHILADELPHIA, Feb. 12.—Wool is steady; Ohio, Pennsylvania and West Virginia XX and above, 31¢; 32¢; X, 30¢; medium, 36¢; 37¢; coarse, 36¢; New York, Michigan, Indiana and Western fine, or X and XX, 28¢; medium, 36¢; fine washed delaine, X and XX, 34¢; 37¢; medium washed combing and delaine, 38¢; 39¢; coarse do, 36¢; 37¢; Canada washed combing, 34¢; 36¢; tub washed, 37¢; 43¢; medium unwashed combing and delaine, 27¢; 29¢; coarse, 27¢; 28¢; Eastern Oregon, 15¢; 20¢; Valley Oregon, 21¢; 27¢; New Mexican and Colorado fine, 13¢; 18¢.

NEW YORK, Feb. 12.—Wool steady, quiet; domestic fleeces, 22¢; 37¢; pulled, 15¢; 33¢; Texas, 13¢; 22¢.

Eastern Grain Markets.

CHICAGO, Feb. 15.—Wheat easier; cash and March, 75¢; 16¢; May, 80¢; 16¢. Corn, steady; cash and March, 45¢; 6¢; May, 51¢; 50¢.

NEW YORK, Feb. 15.—Wheat has been sold freely at the Produce Exchange to-day on the reported failure of A. Lefarges & Co., a big Bordeaux banking house, which, with another house, did all the banking business for grain in that city; 89¢; 89¢; for March 90¢; 89¢; for April, 91¢; 89¢; for May and 91¢; 89¢; for June.

The Demand for Apricots.

NEW YORK, Feb. 12.—An active demand has suddenly developed for California evaporated apricots, and much higher prices soon are probable. For some time past the best goods have been a drug in the market at 14¢. A few days ago a lot of 500 boxes was placed at 14¢, and from this buyers' interest began to increase, and the fact by this means was brought to the surface that in all the principal cities the supplies had been seriously cut into. Holders then became firmer in their views and buyers were anxious, which have now resulted in an advance to 16¢, with bids at 15¢ quite eagerly made without business upon the basis. Reports from Philadelphia advise little stock obtainable. Chicago is said to be about out, and in Boston there is a very small available quantity, while on the Pacific Coast the supply is reported exhausted.

California Products in Chicago.

CHICAGO, Feb. 11.—The receipts of California oranges are still small and prices are unchanged, ranging from 53¢; 30¢ per box.

In the California dried fruit market there was reported a good demand for peaches, pitted plums and apricots. Trade in raisins, which has been quite active of late, is still good. A very steady feeling pervades the market, and stocks are still ample for the demand. We quote: Peaches, sun-dried, in sacks, 10¢; 12¢; do, evaporated, in sacks, 10¢; 12¢; do, peeled, in sacks, 10¢; 12¢; do, in boxes, 10¢; 12¢; apricots, sun-dried, in sacks, 10¢; 12¢; do, evaporated, in sacks, 10¢; 12¢; plums, pitted, in sacks, 10¢; 12¢; prunes, small, 10¢; 12¢; do, large, 10¢; 12¢; nectarines, according to quality, in sacks, 10¢; 12¢; raisins, loose Muscatels, two-crown, 10¢; 12¢; do, three-crown, 10¢; 12¢; do, London layers, 10¢; 12¢; do, 2¢; 25¢; 24¢.

California strained honey, 7¢; 8¢.

A moderate demand exists for good grades of hops, but choice or the high-priced hops sell only moderately, and common qualities are dull. There was no change in prices. Choice Pacifics, 12¢; 15¢; common to prime, 8¢; 12¢.

Beans are scarce and firm. The late advance in prices is maintained. In a jobbing way the following quotations can be obtained, and in a small way a shade more is paid: California, according to quality, 2¢; 75¢; 2¢; 85¢.

Local Markets.

BAGS—The pool continues to advance prices with each heavy rain. The call from farmers is fair; many are buying one-half or more of their requirements at the present prices, and deferring the balance until later on. The pool say they will advance prices still more. June-July delivery for Calcuttas is quoted at 7¢; 40¢.

BARLEY—The supply of choice grades of Chevalier, brewing and feed are scarce. Poor grades of Chevalier and feed are in liberal supply. On Call the rains caused the bears to sell freely, but the most of the business was cross orders so as to buy actual barley at less money. To-day's sales on Call are reported as follows:

Morning Session: Buyer season—600 tons, 83¢; 100, 83¢; 300, 83¢; 400, 83¢; 500, 83¢; 600, 83¢; 700, 83¢; 800, 83¢; 900, 83¢; 1000, 83¢. Afternoon Session: Buyer season—200 tons, 83¢; 400, 83¢. Buyer 1888—300 tons, 90¢; 400, 83¢.

BUTTER—The market is stronger and higher under good demand. Western creamery in tubs is coming in quite freely and finds good sale at 27¢; 32¢.

CHEESE—Receipts are light, stocks light, demand good, and prices higher for mild new.

EGGS—The market is lower and easy at the de-

cline under free receipts of California and Eastern. The demand is very large and increasing.

FLOUR—The market is without essential change. Leading brands are steady.

WHEAT—Although there were about ten vessels loaded the past week, yet the tonnage loading is larger than last week. Good to choice shipping wheat is scarce, with the warehouses here and at Port Costa containing very little but that bought for export. The supply in the country to come forward is mostly poor grades. On Call, trading was fair, with dealers by a system of cross orders forcing prices down. To-day's Call sales are reported as follows:

Morning Session: Buyer season—100 tons, 1.38¢; 100, 1.38¢; 200, 1.38¢; 300, 1.38¢; 400, 1.38¢; 500, 1.38¢; 600, 1.38¢; 700, 1.38¢; 800, 1.38¢; 900, 1.38¢; 1000, 1.38¢. Afternoon Session: Buyer season—100 tons, 1.37¢; 100, 1.37¢; 200, 1.37¢; 300, 1.37¢; 400, 1.37¢; 500, 1.37¢; 600, 1.37¢; 700, 1.37¢; 800, 1.37¢; 900, 1.37¢; 1000, 1.37¢.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Feb. 12, '87.	July 1, '87 to Feb. 11, '88.
Flour, qr. sks.	3,004,074	2,295,124
Wheat, cts.	10,554,173	5,931,188
Barley, cts.	1,866,722	1,725,693
Oats, cts.	109,707	136,909
Potatoes, sks.	642,811	798,994
Corn, sks.	66,593	152,626
Rye, sks.	17,749	15,324
Buckwheat, sks.	5,253	2,732
Beans, sks.	377,100	349,118
Bran, sks.	314,445	328,262
Hay, tons.	67,550	79,644
Salt, tons.	15,383	10,920
Wool, bales.	45,127	39,568
Hides, No.	70,284	65,470
Raisins, 20-lb boxes.	132,833	103,093
Quicksilver, flasks.	10,842	19,274
Hops, bales.	12,546	14,664

The receipts of certain articles of produce from Oregon, Washington Territory and other distant points, for the same period, compare as follows:

	July 1 '86 to Feb. 12, '87.	July 1, '87 to Feb. 11, '88.
Flour, sks.	91,791	164,876
Wheat, cts.	378,091	667,735
Barley, cts.	1,985	75
Oats, cts.	263,641	154,370
Corn, cts.	71,637	12,590
Wool, bales.	9,060	7,284
Bran, sks.	27,918	44,048
Hops, bales.	754	321
Hides, No.	21,005	22,251
Rye, cts.	—	280
Potatoes, sks.	58,495	13,629

Cereals.

The figures presented below indicate that there were on Dec. 31, in the United States, after providing for all calls (including those for bread, seedling and unavailable reserves), 57,409,706 bu. of wheat available for export, compared with 93,000,000, with 85,000,000 and with 158,000,000 bu. at the corresponding dates in 1886, 1885 and 1884.

	1887-88.	1886-87.	1885-86.	1884-85.
Wheat crop, bushels, July 1.	436,339,000	477,218,000	537,112,000	512,768,000
Reserves available July 1.	18,608,127	30,516,000	38,455,000	38,980,474
Total supply, bushels, July 1.	454,947,127	507,734,000	575,567,000	551,748,474
Less seedling (winter and spring).	51,965,443	50,792,000	61,476,000	61,476,000
Remainder.	402,981,684	456,942,000	514,091,000	490,272,474
Exported July 1 to December 31.	350,088,304	375,920,358	361,071,906	349,409,506

Available for export December 31.	57,700,766	75,537,773	87,733,285	108,143,159

H. Kains Jackson writes as follows: An estimate of prospective supplies has been anonymously prepared by a firm dealing largely with California. The stock of foreign wheat on January 1, 1888, is taken at 2,500,000 qrs., including flour, and the sales of English wheat for January, February and March are reckoned at 2,000,000 qrs. Imports for the same three months are calculated as follows:

	Qrs.
Pacific Coast	350,000
Chili	50,000
Russia	500,000
India	100,000
Atlantic ports.	600,000
Other ports.	200,000
Flour imports	1,200,000

The grand total of supplies on these figures will be found to be 7,500,000 qrs., whereas winter rate of consumption will require 6,500,000 qrs. for the three months' food. If these figures be in any way correct, it follows that stocks will be reduced to just a million qrs., which is a dangerously small reserve at any time. Whether at the present time, with Europe disturbed, and an war not regarded as unlikely in the spring, such an exhaustion of reserves can be

quietly regarded by the trade, is a matter for the trade's own judgment.

The Eastern advices continue to note a decreasing visible supply of wheat. Trading there for export, which was fairly active at times in last month, has been quiet so far in February, but for home consumption the demand is good. Regarding crops, no advices are at hand.

Oregon advices report the shipments of wheat from August 1, 1887, to February 1, 1888, as aggregating 150,000 short tons, with eight vessels loaded and not included in the above, and 13 more to load. California millers are still taking quite freely of extra choice grades, while it is claimed that California exporters are buying to some extent. Oregon farmers are reported to be meeting the market fairly freely. Crop prospects in both Oregon and Washington are favorable.

In this State farmers are reported to have about finished plowing and seeding. The acreage to wheat is largely in excess of last year, and put in under the most favorable circumstances, the cold spell in last month having in nearly all the districts mellowed the ground. The rains of the past week were very opportune, but well-distributed spring rains are wanted to insure a large yield. With next month dry, the yield will most certainly be light.

The wheat market the past week has been irregular, with more or less of a deadlock between buyers and sellers. Several parcels of good shipping, favorably situated, fetched \$1.36½ to \$1.37½ for stiffening and topping off, but for parcels of the same grades otherwise placed the highest bids were \$1.35. The European markets strengthened, but charters here advanced from 25 to 35 per long ton. There is very little good shipping wheat in the State unsold, while even fair is getting scarce. But there is a good deal of poor yet to be had. The exports the past week were quite free, while an increase of ships chartered is reported.

In barley, the past week has not witnessed any material change. The rains were taken advantage of by the bears to hammer prices down on Call for futures. The stock of grain in this city is being gradually reduced, but still it is heavy and acts as an incubus on the market, although it is known that about all is held against Call Board sales. Inferior advices report a large consumption, and supplies decreasing quite rapidly. Choice Chevalier is in good request for Australasia, as is choice brewing barley for the East. California brewers are buying sparingly. Choice grades are very scarce, owing to there being too many small grains—grains that pass through the meshes and that do not sprout. Choice grades of feed are sold for brewing in many instances. The supply of poor feed continues liberal. The acreage seeded to barley is less than last year.

Corn has held fairly steady at full prices throughout the week. Choice grades are firmly held, and to buy, full prices are paid. The consumption, so far this season, has been larger than for the like time last season.

Oregon and Washington Territory continue to send us free supplies of oats, which cause that cereal to rule in buyers' favor. To make sales so as to save expenses, concessions are made for parcels on the wharf.

Rye is quiet and weak. Receipts are large, while the demand is light, owing to contractors for the compressed yeast having their wants met.

Buckwheat is quiet, but firm for choice.

Fruits.

Apples are in moderate supply, causing choice to fetch full prices, with now and then an advance for something extra to fill distant orders.

Limes and lemons are coming in quite freely, and although the call is good, prices favor buyers.

Oranges are meeting with an increased demand, both locally and for shipping. Values are firm, particularly for those well selected and well packed. The East is drawing more freely.

In dried fruits, the market is strong at full prices. There is an improved call for apples. The stock of all kinds is light for the season.

In raisins, the market exhibits great strength, under light supplies of choice, a fairly steady call, and an expected free demand to set in soon from the Territories.

Feedstuff.

The market for ground feed is fairly active, considering the improved pasture. Bran is steady, but middlings are easy. Feed cornmeal is strong. Ground barley is steady, with a good demand ruling, it being used chiefly with chopped straw.

Choice grades of hay are wanted, as are good grades, and for which an advance in a small way is paid over quotations. The poorer grades are firm, as is straw. Considerable of the latter is being used.

Vegetables.

There has been and continues to be a good demand for seed potatoes, with a slight advance paid over top quotations. Choice potatoes for the trade are firmly held under moderate receipts and a good demand. New potatoes show a decided improvement; they sell at from 2¢ to 4¢.

Some early asparagus comes in daily, and brings fancy prices.

Cucumbers continue to sell at from \$1.50 to \$2.50 per dozen.

Tomatoes from Los Angeles arrive more freely, but sell at good prices.

Cabbages are strong at full prices, with shippers in the market for all choice hard heads.

Mushrooms are in liberal supply, but meeting with a good demand, prices are fairly well maintained.

Live-Stock.

Beef cattle have been offering more freely, chiefly from distant points. The improving pasture in this State causes stockmen to hold back. Veal is wanted, and will fetch a slight advance on quotations. In mutton sheep there is nothing new to report. The extreme high prices are bringing out more supplies, causing an easier feeling to obtain. In milch cows the demand is good from both dairymen and families. The price, as usual, varies according to the age of the cow and the quantity of milk given from day to day. In horses, there is more inquiry for matched teams, single-footers and general utility horses. In any of these, good prices are obtainable for good animals. Work horses are slow.

Hogs come in sparingly, but then the high prices have reduced the inquiry, particularly so now, during the Chinese New Year's. The market closes barely steady. There is an improved call for stock hogs.

The market for dressed meat is quotable as fol-

lows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed, and one-half from the price of grass-fed, that is animals running at large).

BEEF—Stall-fed, 9¢; 9¢ per lb.; grass-fed, extra, 8¢; 8¢ per lb.; first quality, 7¢; 7¢ per lb.; second quality, 6¢; 6¢ per lb.; third quality, 5¢; 5¢ per lb.

VEAL—Choice, 12¢; 12¢ per lb.; fair to good, 8¢; 8¢ per lb.

MUTTON—Wethers, 9¢; 9¢ per lb.; ewes, 9¢; 9¢ per lb.; lamb-spring, 15¢; 15¢ per lb.

HOGS—On foot, grain-fed, 6¢; 6¢ per lb.; dressed 9¢; 9¢ per lb.; soft, 5¢; 5¢ per lb.; dressed, 7¢; 7¢ per lb. Stock hogs, 4¢; 4¢ per lb.

Miscellaneous.

Free receipts of dressed fowls from Nebraska continue to operate against this market, particularly for turkeys. Receipts of California are only fair.

Grain has, as usual, fluctuated from day to day. Hams, bacon and lard are very strong, with higher prices looked for.

Hogs are more inquired for, but the small supply of good to choice is against an active demand. Brewers have to content themselves with off grades or else pay good prices.

In wool there is nothing new to report. The stock here is about 2,000,000 lbs. It is generally conceded that the finer clips will fetch better prices this year than they did in 1887, owing to the change in fashion.

Overland shipments of produce from California in January were 28,045,000 pounds, the leading articles being as follows: Barley, 107,821 cents; beans, 4207 cents; Lima beans, 1423 cents; brandy, 18,360 gallons; wine, 268,485 gallons; honey, 30,120 pounds; hides, 223,990 pounds; hops, 209,020 pounds; potatoes, 8768 cents; dried fruit, 261,660 pounds; raisins, 1,346,666 pounds; citrus fruit, 603,580 pounds; canned goods, 976,460 pounds; wool, 1,166,330 pounds.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way	282,795	193,922
In port, disengaged	54,943	101,668
In port, engaged	491,087	17,509

Totals 388,825 313,399

To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, Feb. 15, 1888.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

Sacramento Louisiana Tract.

This tract has been offered for sale by Messrs. Alsip & Co. of Sacramento, and is intended to supply a want long felt in this city in consequence of the indisposition exhibited by property-holders to sell. This tract is peculiarly adapted for a suburban district and will be to Sacramento what Kingstown is to Dublin or Brighton and Blackheath to London. The soil is superior and recommends itself, the location in every sense convenient, the roads always in excellent order and the new electric road almost completed to the Louisiana tract. It is supposed the business men of Sacramento will in their own interests secure a home lot and thus combine rural and city life daily. Should immigrants buy up, no better land could be found equally fit for cattle or fruit ranches, one acre of alfalfa giving three cuttings annually and yielding about 18 tons. The long-established firm of Messrs. Alsip & Co. have information that 18 inches of rain, which is about the general fall, insures a crop above the average, and the oldest pioneer has yet to see a failure. With such prospects buyers will be repaid without adding the surrounding scenery as well as the disposition of the citizens of Sacramento, widely known for their hospitality and affability.

Sacramento, Feb. 14.

From the American Agriculturist, New York.

A few years ago we knew not the potato bug, and the makers of hand water engines of all kinds could make their squirts to clean carriages, wash windows, put out fires and do various other feats in hydraulics, without regard to bug-killing. Now a pump that does not provide for the potato is not complete. Such was our thought as we unpacked the parts of Lewis' Combination Force-Pump. It must not be thought from this that the pump is complicated, as it requires but a single change to convert a regular force-pump, with its short hose, into a garden syringe; another slight change and there you are—a Paris-Greener or a London-Purpler—the potato bugs are provided for and the combination is complete. The thing is a perfect arsenal of water guns, each serviceable in its way and made for use rather than show.

"ALL KNOWN FERNS" is the title of a work now nearly completed by Dr. Lorenzo G. Yates, the noted Santa Barbara botanist. It is intended to bring together in an octavo of about 300 pages all the various discoveries in pteridology which have been made since the second edition of Hooker & Baker's "Synopsis Filicum" was published in 1873, and to furnish all the information extant "as to the known habitat and distribution of every recognized species, with synonyms and page references to other publications for more detailed descriptions of characteristics and habits of growth." Dr. Yates has been assisted in preparing the work by J. G. Baker of the Royal Herbarium at Kew. The price of the volume is not to exceed \$2.50, or \$3 if interleaved.

Thermalito.

The directors of this new colony are daily disposing of lots, and have, so far, succeeded beyond expectations. The citrus fair has had its effect so far and the recent exhibit at San Jose, which justly received general praise, must bring its own reward.

OROVILLE LANDS.—We have just learned from E. Tucker of Oroville that land sales in his office last month exceeded \$33,000, and during the months of March and April heavy sales are expected.

PACIFIC COAST WEATHER FOR THE WEEK.

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper. In writing correspondence, items of information, or on other business, please use a separate sheet.

Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

WE call attention to Moseley's Occident Creamery and Refrigerator, advertised in the columns of this issue. It is made by the Moseley & Pritchard Manufacturing Co. of Clinton, Iowa. The president of the above corporation, F. W. Moseley, is one of the best known manufacturers of dairymaking apparatus in this country. The Occident, in addition to being a model of compactness, is constructed on correct general principles and elegantly finished. It is, we are told, winning golden opinions from those who are using it. The very liberal offer of the manufacturers to give first purchasers wholesale rates and pay the freight, should induce many to send at once for circulars and terms, as we are informed they have as yet no agents in California.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

- F. B. LOGAN—Santa Clara Co.
- JOHN G. H. LAMPADUS—Monterey Co.
- G. W. INGALLS—Arizona Territory.
- WM. WILKINSON—Stanislaus and Merced Co.'s.
- A. F. JEWETT—Tulare Co.
- C. E. WILLIAMS—Yuba and Sutter Co.'s.
- R. G. HUSTON—Montana Territory.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

Will be a Special Brand of Seeds Guaranteed by us as Good and Reliable.

406 and 408 SANSOME STREET,

SAN FRANCISCO, CAL.

Correspondence solicited from Merchants, Farmers and others. All kinds of Seeds, Lawn Grass, Plants and Bulbs always in Stock.

CHOICE ALFALFA SEED

In Lots to Suit.

Grangers' Business Association,

108 DAVIS STREET, SAN FRANCISCO.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Having a large proportion of my seed enables me to warrant its freshness and purity, as see my Vegetable and Flower Seed Catalogue for 1888. FREE for every son and daughter of Adam. It is liberally illustrated with engravings made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Early Corn, and a score of other valuable vegetables. I invite the patronage of the public.

JAMES J. H. GREGORY, Marblehead, Mass.

THE "DEERE" ORCHARD AND VINEYARD PLOW.

We offer this season something new in the way of Vineyard Plows, which we think is superior to any that have been in the market heretofore.

This plow is made by JOHN DEERE & Co., of Moline, Ill., who have been for some time experimenting in the manufacture of a plow suitable to Orchard and Vineyard work, and the result of their efforts has been attended with their usual marked success. The Plow has a STEEL BEAM which is not movable, but has an offset in the standard part that makes it center draft. It has a landing device that is superior to anything that has been gotten up yet for that purpose; it consists of a chain and perforated bar that is readily adjusted to any desired angle; the handles are also adjustable, allowing the plow to run close to the vines or trees. This plow is made entirely of Steel and Iron, and is light, compact and strong.

PRICE, 8-inch Cut with Extra Share, - - - \$16.50

KEYSTONE 2-LEVER DISC HARROW.

THE KEYSTONE DISC HARROW has met with wonderful favor ever since its introduction. It is made with two levers to set the cutters at different angles while the machine is in motion, and to relieve it from clogging by throwing either gang back. It is the only Harrow made with flexible frame so the cutters can adapt themselves to the uneven surface of the ground. The discs are made of steel. The boxes are chilled-hardened to prevent cutting on the axle. It has revolving scrapers, which not only keep themselves clean, but clean the discs.

We have had a Special Size made for Orchard and Vineyard Work (viz, 5 feet), which suits the purpose for which it is intended better than any implement of its kind in the market.

PRICES:

5 FEET, 16 INCH DISCS	EACH, \$55 00

DEALERS IN

Agricultural Implements, Buggies, Buckboards, Carts, Harness, Etc.

CALL AND EXAMINE

OR SEND FOR CATALOGUE

Of our large line of Vehicles and Harness for Farm, City and Livery use. Including, as it does, all grades of work and every variety of style, an investigation will well repay you. Of low-priced Buggies we have the best work, for the money, in the market. Numerous improvements for 1888 place it far in the lead of anything on the Coast—quality and price considered.

A Complete Assortment of High-Grade Work, Fine Harness, Etc.

THE FLINT CART

IS THE NEATEST, HANDIEST AND BEST.

THE PRINCIPLE OF THE FLINT consists in the spring being attached under the shafts, and connected with each seat arm by OUTWARDLY FLARING SHACKLES which entirely encircle the shafts and WORK INDEPENDENTLY of them. WHAT THIS PRINCIPLE ACCOMPLISHES.—The weight of the driver in his seat causes NO LATERAL OR VERTICAL MOTION OF THE SHAFTS. It prevents any galling or chafing of the horse. The driver not only rides with perfect ease and comfort, but ABSOLUTELY STEADY. The shafts always balance, regardless of the different weights of drivers, and are not affected by his weight when riding on uneven roads.

CONSTRUCTION, MATERIAL, ETC.—Shafts, Cross Bars, Seat Arms, etc., are of the very best selected, seasoned second growth white ash. WHEELS are of the finest quality Pinneo & Daniels compressed band. SPRINGS, best Swede steel and oil tempered. AXLES, Liggett's double collar interchangeable steel axles. Cane seats, tipped and leathered Shafts, and the best finish and proportions of any cart manufactured.

On March 1st WE WILL REMOVE to more commodious quarters at 33 and 35 MAIN STREET, two blocks below our present location and a few doors south of Market St., where we invite our many patrons and the trade in general to call and see us.

SINGLE COPIES, 10 Cts.

A Scene in Madagascar.

Interested, as Californians are, in plant growth and natural scenery, we have thought that the glimpse at Madagascar which we give on this page would be acceptable. Madagascar, though it has been known for more than a thousand years to the Arabs and for more than three hundred to Europeans, is still but imperfectly explored.

Its coast line has been accurately laid down and various incursions have been made into the interior, but there is much still awaiting the venturesome explorer. It is an interesting land from whatever point of view it be regarded. It is the third largest island in the world; nearly 1000 miles in length. It has vast low, flat plains along its southern shores, but in the northern portion much of the coast is precipitous, the high land often approaching the sea, and it is in such a situation that the artist has chosen the scene shown upon this page. The loftiest mountains are nearly central in the area of the island, and reach an elevation of nearly 9000 feet.

The most interesting feature of the engraving is the glimpse given of the peculiar vegetation of Madagascar. There are several fine specimens of the "traveler's tree" (*Urania speciosa*), with its graceful crown of plantain-like leaves growing in a fan-shape at the top of a lofty trunk, and supplying a quantity of pure, cool water, and every portion of it being of some service in building. Another plant of which two specimens are shown in the foreground, one on each side of the chasm, is the rofia palm (*Saguaruffia*), from whose pinnate leaves a valuable fiber, used in making cloth, is obtained. The grand forest tree towering aloft in the center of the engraving is another characteristic growth of Madagascar, the spice tree (*Ravintsara Madagascariensis*), which has fragrant leaves and fruit. These are but a few of the peculiar growths of the island, the flora of which, according to the botanists, a small part is clearly Asiatic while another closely corresponds with the tropical zone of Africa, while the fauna is so nearly allied to the Asiatic and Malayan that it is surmised that it was once part of a vast archipelago, occupying what is now the Indian ocean. The people, too, appear to be of Malayo-Polynesian

A SCENE IN MADAGASCAR, SHOWING CHARACTERISTIC PLANTS OF THE ISLAND.

stock and not African, though there are inter-mixtures of African and Arab elements on the western and northern coasts. The inhabitants are not civilized in a European sense, but they

are not a savage race and some of the tribes can hardly be classed among barbarous people. They have never been cannibals. They are law-abiding and loyal, living in settled communities.

The Cattle Interest.

The present high meat prices should induce still wider attention to live-stock interests. It is true that this branch of our agriculture is progressing, though not as rapidly as the fruit industries. It will be a great mistake to let all the available capital go to the improvement of fruit lands. Investors should look beyond the smiling valleys and the warm slopes and see that our progress is built evenly, and that the situations which will yield green feed, fodder and grain for meat animals are turned to their proper uses. It is clear that the time has come when one can profitably do much better work in producing beef, mutton and pork than was warranted a few years ago. Our local demand for these foods is increasing with our great advance in population, and the general condition of meat production in the country at large also justifies local efforts. The past winter's experience has gone far to prove that growing tender stock without provision for food or shelter in a blizzard-beset country is very hazardous, and the fear that the great cattle kings of the Territories would crush the country with a beef surplus seems to have been misplaced. These considerations, and others like them, indicate that tame beef from small farms is worth the producers' attention, and we like to see a disposition to give it.

One valuable surety of a good beef supply for California is found in the way the Nevada growers have stood the shock of the severe winter. The *Virginia Transcript* says: "Our cattlemen began right and have continued in the right way. They have always kept their business well in hand—have never rushed in thousands of head of cattle without knowing how they were to be carried through the winter, as has been done in Montana and other regions. They have taken an account of provender on hand and have rid themselves in time of superfluous stock. They started on a solid basis—that of providing a supply of food for winter—and each year that foundation has been growing broader. There are now in all

parts of the State thousands and thousands of acres of alfalfa-fields where a few years ago there was nothing. This year more land will be sown to alfalfa than before in any two years."

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

The Santa Cruz Mountains.

EDITORS PRESS:—Having lately visited Skyland, one of the picturesque regions of the Santa Cruz mountains, a few notes gathered on my trip may prove of interest to readers of your journal. The stranger passing through the Santa Clara valley by railway scarcely imagines, as his eyes rest upon the evergreen mountains that lie to the westward, that so many human habitations may be found there as exist to-day. A visit in person is necessary to realize the fact that not only hundreds of homesteads are scattered from base to summit, but thousands have sought and found a Mecca in these mountains. South of Los Gatos creek, which affords a pass for the narrow-gauge railroad from your city to Santa Cruz, the land for the most part belonged to the Government until a comparatively recent date. Now, however, all is changed. New cottages numerously dot the steep mountain-sides, and patches of clearing with orchards and vineyards in the various stages of growth, are unmistakable evidence that energetic and faithful yeomen have found a lodgment here, and will, in a few more years, largely swell the product of the fruits of California. Following up Los Gatos creek 3½ miles, I reach Alma, a small station on the railway, and a little distance beyond, stop for the night at the Forest house, which affords better accommodations for the traveler than he would reasonably expect to find outside a city. Col. S. O. Gregory, the manager and proprietor, is an enthusiast on mountain life—especially the Santa Cruz mountains—and his partiality, when the excellent quality of the fruits, the opportunities for hunting and fishing, and the pleasant and healthful climate are considered, is quite excusable.

The infusion of new blood in the proprietorship of the lands that have long been held along Los Gatos creek is all that is necessary to inaugurate such changes as will astonish the "natives." The old forty-niner "must go," or rather his shiftless methods. They can't stand before the enlightenment and progressive development that mark the period. No better evidence of the correctness of this position is needed than to visit the place of F. O. Zigler at Lexington, near Alma. This gentleman has lately purchased here a tract of 250 acres which he is converting into a mammoth orchard. Prior to taking possession he found the old place in a most dilapidated condition, but by the aid of a considerable force of men and liberal expenditure such changes are being effected that within a limited period the former owner will likely fail to recognize the place which for a score of years he perhaps called his "home."

Near Alma is the vineyard and winery of William Rihl. He has 23 acres of vines and is increasing his acreage. Last year he made 6000 gallons of wine. His winery constructed last year is two stories high and 40x50 feet in area. Mr. Rihl has expended \$10,000 on his place and proposes to still further develop and adorn it.

A few miles up stream is Patchen, where resides D. C. Feely, a prominent fruit-grower, with whose success your readers in general are familiar. He has done much to acquaint the world with the high quality of the Santa Cruz mountain fruits, having exhibited several varieties at the World's Fair in New Orleans 1885-6, and being awarded premiums over all competitors.

I dined with Joshua Norrish of Patchen, a gentleman who lately emigrated from Illinois, who has come to engage in fruit culture and share our "glorious climate." There is room here for many thousands of such men, and the country is acquiring them rapidly. This observation is forced upon me by actual experience gained on my trip.

No section of California which I have visited can boast of a better class of citizens than have sought an abode in these mountains. It seems to afford a natural retreat for not only those who realize the pecuniary gain that flows from the production of the choicest fruits of many varieties grown in the State, but among them are to be met many whose fortunes were acquired years ago in other and distant lands. Some are retired business or professional men who have been attracted hither not, as might be supposed, for solitude, but for the enjoyment of the sublime scenery afforded and the recuperation of their wasted energy. The less desirable locations, those which the Government until lately could not give away, are being occupied by citizens of foreign birth who appreciate more fully than the native-born American what it is to recline beneath their own vine and fig tree.

The evening of the second day's travel found me at the home of J. C. McCracken, where I received a warm welcome. It was like meeting old friends, and the entertainment for the night was duly appreciated. Mrs. McCracken, most Californians are aware, is a gifted writer. Her contributions to the *Overland Monthly* and numerous other newspapers and periodicals evince taste and thought, and withal the power of expressing the same in a pleasing manner. Mr. McCracken's place is on an eminence that commands a delightful view of the country on a clear day for 100 miles around. On arising

in the morning, a strange sight met my gaze. A dense fog resembling a hugesnowbank rested upon the landscape beneath. It appeared almost possible to walk out upon it, but in a few hours the vapor arose and a chasm hundreds of feet in depth was presented to the westward.

At the home of D. H. Montgomery, I was shown some of the finest Newtown pippins I have yet seen, and pears of the Easter Beurre variety which weighed from 17 to 20 ounces each.

I also visited the home of E. Meyer in the same neighborhood. He has a tract of 1500 acres specially adapted to fruit, about 100 of which are planted to trees and vines. Thirty acres are in bearing vines. Mr. Meyer has commenced the manufacture of wine, making last year 5000 gallons. He is about to commence the construction of a winery with a capacity of 1,000,000 gallons, which to complete will necessitate the expenditure of \$20,000. The winery is called the Mara Vista. Mr. Meyer is one of the most enterprising men of his section, having constructed over 10 miles of wagon-road within the past few years at his own expense; and building wagon-roads in the mountains is a very expensive job.

Passing through the district known as Skyland, I found much to admire, not only in the natural surroundings, but the thrifty orchards and vineyards of Blake & Hersey, Adams, Mrs. M. G. Norton, Prof. C. H. Allen, Judge Miller, Thos. Slaughter and others. I was impressed with the truth that a mountain home has in some respects a percentage over those of the valley. I think it is safe to prophesy that before the lapse of this century, with present progress as a criterion, these mountains will afford homes to more than treble the present population, as they are only beginning to be appreciated by the average citizen. F. B. L.

THE VINEYARD.

Grape-Growers' Convention.

The Viticultural Commission is mailing for distribution the completed program of the order of exercises to be held at the convention next month in Pioneer hall. It is as follows:

Wednesday, March 7th—Raisins; Table and Shipping Grapes; Markets; Appointment of Committees.

Thursday, March 8th—Varieties to Plant; Resistant Vines; Vineyard Operations; Vine Diseases; Remedies.

Friday, March 9th—Wine and Brandy; Making and Marketing; Cellar Operations.

Saturday, March 10th—The Use of Wines and Brandy; Legislation and Miscellaneous Matters.

The subjects to be spoken on and the names of the speakers are as follows:

T. C. White, Fresno, "Raisins—Drying, Packing and Preparing for Market." Dr. W. S. Manlove, Viticultural Commissioner for the Sacramento District, "Table Grapes." R. J. Harrison, San Francisco, "Wine Storage and the Preserving of Fruits in Cold Storage." Leonard Costes, Napa, "Best and Cheapest Methods of Obtaining a Grafted Vineyard on Resistant Stocks." C. J. Wetmore, Secretary of the Board of Viticultural Commissioners, "The Chaintre System of Pruning and Conducting the Vine in California." H. W. McIntire, President of the Vine Growers' and Wine-Makers' Association, "Distillation of Grape Brandy—How to Establish and Conduct a Distillery." Frank West, Stockton, "Wine Cellars for the Interior Valleys." Dr. John A. Stewart, Santa Cruz, "California Wines." H. A. Merriam, Los Gatos, "Wine and Brandy Making as a Profession." Professor W. B. Rising, State Analyst and Professor of Chemistry at University of California, "Sophistication of Wines." E. H. Rixford, Secretary of the Vine-Growers' and Wine-Makers' Association, "General Hints on Viticulture." J. H. Wheeler, Chief Executive Viticultural Officer, "Some Pests and Diseases of the Vine, with Remedies." J. L. Heald, Crockett, Contra Costa county, "Wine-Making Machinery." H. A. Pellet, St. Helena, "Fermentation." Professor E. W. Hilgard, Professor of Agriculture at University of California, "Results of Experimental Fermentations Made in 1887." Arvad Haraszthy, President of the Board of State Viticultural Commissioners, "How to Drink Wine." F. W. Pohndorff, Mission San Jose, "Wine as a Temperance Agent."

PROF. VIALA'S REPORT.—The visit to this State of Prof. Viala of the National School of Agriculture at Montpellier, France, was mentioned at the time in the *RURAL*. One of his objects was to study the wild vines of America growing in their native soil, and he has sent his report to the Minister of Agriculture, copies of which have been received in this State. It has been translated and issued in pamphlet form in English, and forms Appendix 1 of the report of the Chief Executive Officer of the State Board of Viticulture for this year. Copies of this report are now being mailed to viticulturists throughout the State.

GRAPE IN NEW YORK.—There are 14,000 acres of vineyards along the Hudson river valley, and the average yield is four tons to the acre. At three cents a pound this means \$240 per acre to the grower. Some grow larger crops than this average, and realize \$300 per acre in sales.

THE DAIRY.

Feeding Values of Forage.

EDITORS PRESS:—I wrote you early last fall, giving you my experience in Kaffir corn. At that time I had not tested its qualities as agreed, but now that it is all fed up I can write knowingly. I planted Kaffir corn, Blount's Prolific corn and Dara Sorghum. The Dara Sorghum proved very sensitive to frost. It was vouched for as "a wonderful producer of forage, soappetizing that even the hogs eat it ravenously." Those hogs must have been in the condition of the Prodigal Son when "he fain would fill his belly with the husks the swine did eat," for my stock refused to eat it, green or dried. It was a complete failure.

The Blount's Prolific corn was sown after the frosts. It came up well and grew 12 to 18 feet high. Had it been cut when in the silk I think it would have made good feed, as the stalks were full of ears. As it was, it was allowed to ripen up the lower blades. They dried up and a late wind whipped the stalks clean one-half the way up from the ground. When the fodder was fed the cattle ate the remaining blades and the tender tops—the bulk of the fodder, the stalks, being left in the rack. To have it eaten up clean the stalks had to be cut up and steamed.

The Kaffir corn I thought had succumbed to the frosts, but to my surprise it came up. As I wanted the seed it was allowed to ripen, although it would have allowed cutting three times during the season for feed. The stalks and blades remained green even when dried. Being green there was no loss of blades as with Blount's corn. The grain heads were cut off for seed and the fodder fed. At first I credited the evident preference which the cattle showed for the Kaffir to its being a change; but, as the winter progressed and the Jerseys allowed the Blount's cornstalks to fill the manger, while not a vestige of the Kaffir ever remained, I was forced to conclude that the cattle would not eat up entire the thick stalks of the Kaffir, and refuse the stalks of the Blount's corn, unless there was that in it that they very much preferred. It proved all and more than was ever claimed for it as a forage plant. There was no preparation; the Kaffir was fed in the original bundles, not even untied. There was no waste; not a particle was ever left, and the yield of milk was fine; the butter hard and a bright yellow, with the grain and flavor characteristic of the Jersey. The grain of the Kaffir is a fine feed for poultry or stock, and is said to make an excellent flour.

The crowning virtue of the Kaffir is the fact that it will do well on any bottom land, without irrigation if well cultivated. In fact, in Placer county, I saw a patch on high land that had had no water but had been well cultivated, and the grower was loud in his praises of "Kaffir for a dry ranch." Can any of the readers of the *RURAL* give their experience in Stewart's Hybrid Sorghum? What I desire most to know is, do the cattle eat it up clean without preparation, and do they do well on it? *Murphy, Cal.* E. H. SCHAEFFLE.

The Dairy in Northern New York.

EDITORS PRESS:—Perhaps a few notes concerning the new devices now in use among the dairy farmers of my native State—New York—to better the quality of their dairy products, lessen the labor and cost of production, and obtain the best prices, would interest some *RURAL* readers.

The difficulty of securing good, competent female help among the dairy farmers was one of the principal causes that at first led to the organization of the plan of co-operative dairying, and it has proved to be a great relief to the farmers' wives and families, whose resources of strength were too often sadly over-taxed, and the result has been so highly satisfactory that it is not likely to be discontinued, more especially as the profits of dairying have not been diminished, but rather increased where the management has been good.

Having read a statement of the methods of making both butter and cheese at the Ogden creamery, located in Franklin, N. Y., and as this method of making cheese may be new to some, we give it, as it has proved to be remunerative to the parties who leased the factory, and has also proved satisfactory to their patrons.

A. R. Brown & Co. of Guilford, N. Y., manufacturers of the Arctic creameries, are the lessees, and own all the fixtures and machinery used in the building, and receive a stated price per pound with a guarantee that a good marketable product shall be produced.

The advantages claimed for this mode of setting milk are convenience, small space required as compared with many kinds of dairy apparatus, and the rapid and even cooling of the milk, the water being conveyed through the milk vats so as to cool both bottom and center of the vat as well as outside.

It is asserted that in this creamery, with the water at 40° F., all the cream can be obtained from the milk in 12 hours.

The Arctic creamery apparatus is arranged on a platform above the level of the cheese vats, and just below the level of the platform where the milk is weighed, so that when the

milk is received at the factory it is at first weighed and the account taken of the number of pounds furnished by each patron, and then run into the creamery vat; after standing a sufficient time, the cream is removed and the milk drawn off into the cheese vats, where it is heated to the required temperature for cheese-making, by steam pipes connected with the engine which furnishes the motive-power used for churning, also for pumping water.

Part of the season they made what is called night skims, setting the milk for 12 hours, then skimming and mixing the skimmed milk with the morning's milk and the fresh buttermilk combined to make cheese.

The cream is allowed to ripen till it develops a slight degree of acidity, and the churning is done in a rectangular box churn of a capacity of 300 gallons.

The cream is churned till the butter comes in a granulated form, when the buttermilk is drawn off and mixed with the milk for making cheese. After August 1st both messes of milk were skimmed, letting one mess stand 24 hours, the other 12 hours. This, of course, makes rather a lean cheese, but purchasers are found for it at a price that proves remunerative; pays for handling the milk in this manner.

The butter granules are washed entirely free of buttermilk by a flow of water through the churn, and every operation of butter and cheese making is conducted with the utmost neatness and precision, and the results show the profit to the managers and patrons of this careful and systematic manner of conducting all their operations.

The milk furnished at this creamery for the month of August brought the patrons \$1.19 per cwt.

Some may object to a skim cheese, but I have eaten cheese made on this coast and sold as a whole milk cheese not as rich as this skimmed milk fortified with rich, sweet buttermilk-made.

There are many fine cheese dairies on this coast, that turn out a fine article, but there is more inferior cheese made than there need be. As to butter, many Eastern people have admitted that good butter is the rule here; that California people have no reason to "quarrel with their bread and butter," as both articles are better than the average furnished at hotels and eating-houses in the States east of the Rockies. *M. A. S.*

[Of course, in considering the applicability of all these creamery appliances in this State, it must be remembered that in all parts of the State, except the Sierra dairy region, ice is a luxury, and water at a temperature of 40°, or anything like that, costs much money—more than any dairyman has yet found it profitable to expend in that way. We don't have ice-houses in our back yards in this climate. For this reason and because of the advantage of not setting the milk at all, the Centrifugal cream separators are being so largely used here. Of course, for making both butter and cheese from the same milk, the sweet skim-milk fresh from the Centrifugal is a best possible condition for skim-cheese making, provided the milk is not skimmed too clear of fat, which is possible with the Centrifugal.—EDS. PRESS.]

Oleomargarine Contest Renewed.

Dispatches from Washington foreshadow the renewal of the bitter fight of two years ago over the passage of the Oleomargarine bill.

The oleomargarine interest has caused the preparation of an abstract which has been, or will be, placed in the hands of every Senator and Congressman. The abstract asks for the repeal or modification of the law, and says that the passage of the law was obtained by fraudulent means; that bogus samples, concocted by the opponents of oleomargarine, were submitted, and that the law destroyed the industry to the benefit of another. It is also asked that oleomargarine be included in the general law concerning adulterated food, and that the tax be reduced to one cent per pound, and that the license fee for dealers should not exceed that charged for selling liquors and tobacco.

In answer to this the Mercantile Exchange, speaking in behalf of the dairy interests, states that the samples submitted for analysis were procured in the open market, where they were being sold for butter, and that in the manufacture of oleomargarine, with a temperature sufficiently high to kill the germs of disease, without spoiling the product, disgusting animal substances may be deodorized and used without danger of being detected in the result, and the substance may be made so as to be unwholesome, but no one can tell even from a chemical analysis what fats and oils have been employed.

The bill already introduced in Congress by oleomargarine makers provides for the repeal of the present law and the doing away with taxes and license fees. It provides for the sale of imitation butter in original packages of not less than five pounds, and on the outside of the package the ingredients of the mixture must be stamped in plain letters. Another section refers to pure food, and is evidently inserted for the purpose of obtaining the support of those interested in the passage of a Pure-food bill.

HORTICULTURE.

Limits of Profitable Citrus Culture.

At the meeting of the American Horticultural Society in Riverside, the following interesting essay was read by H. J. Radisill of Riverside:

The cultivation of citrus fruits is unquestionably one of the most attractive branches of horticulture. They do not fail with their bright evergreen foliage, fragrant blossoms, and golden fruit to stimulate even the octogenarian in horticulture to a renewal of his interest in this occupation, and to a desire to plant and own a grove.

Until within a comparatively recent period the Latin and Mongolian races have possessed a monopoly of citrus-fruit culture. But now the Anglo-Saxon has entered the field in both continents, and, with his accustomed system and energy, is infusing new life and new ideas into this calling, and true to the instincts of the race, makes the pertinent inquiry, "What permanent profit is there in it?"

The family of citrus fruits is divided into five prominent branches, to wit: the orange, lemon, lime, citron, and the shaddock, or pomelo mosse or pomalo, and in the profitability of their cultivation stand in the order named.

Therefore, in treating this subject I will consider only the orange as the representative of the family, the hardiest of the race, the most generally cultivated, and the most profitable.

Originating, as it is now supposed to have done, in the warmer portions of Asia, the foothills and tablelands of the Himalaya mountains, it was but little known, and only occasionally mentioned in myth and story until about the tenth century of the Christian era, when it was first distinctly noticed by Avicenna, a prominent Arabian physician of that period.

From that time it was gradually introduced and acclimated along the shores of the Mediterranean sea. The sweet orange passing through Persia and Syria to the Ionian isles, the shores of Italy, Sicily and the south of France, and according to Lowdon, reaching the south of England about the 16th century, where it was cultivated only for a short time successfully as a wall fruit. The bitter orange passed through Arabia, Egypt and the north of Africa to Spain and Portugal.

Through the Spanish and Portuguese explorations and conquest it was carried to the Azores and the Madeira islands, to the West Indies, and to Florida, Mexico and South America. In situations favorable to its growth it is now found in a zone spanning the earth, extending from 40° south to 46° north latitude, and from the level of the sea to an elevation of 5000 feet above.

It is especially cultivated for profit in Syria, Turkey, Egypt, Northern and Southern Africa, Greece, Italy, France, Spain, Portugal, the Azores, West Indies, Brazil, Mexico, a portion of the Gulf Coast of the United States, Florida, Southern California, and to some extent in Central and Northern California, Sandwich islands, Japan, Australia, a portion of China and India. If we were to judge, therefore, from the great area of territory and remarkably diverse conditions in which the citrus fruits are found, we might readily conclude that they could be profitably grown at any point adapted to them within the latitudes named above.

This is not the case, however, for experience has taught, and is annually teaching us, that climate, soils, varieties and markets influence and control the profitability of citrus-fruit culture to a greater or less extent than mere geographical limits. We will therefore consider these in the order named.

Climate.

That of the Azores has been considered by many of the authorities as the best for citrus fruit culture.

Possessing a moderately humid atmosphere with a mean temperature of 58° in winter, 61° in spring, 68° in summer, and 62° in autumn, and a minimum temperature of only 40° and a maximum of 90°, and free alike from the desiccating winds of Africa, and the cold northerly winds that prevail throughout Southern Europe, the citrus fruits are produced there readily, without irrigation, in great quantities and of the best quality.

The isothermal lines that indicate the limit of the growth of the citrus fruits along the northern shores of the Mediterranean, under which name I include all its arms or branches, such as the Aegean and Adriatic seas, etc., show a much greater diversity of location than those along the Pacific Coast, and a greater range of temperature than the climate of the Azores. At Joppa, on the coast of Syria, in latitude 32° north, the orange is grown profitably near the sea-shore, and inland to an elevation of about 800 feet above sea level, but only extending about four miles distant from it. This narrow belt, in varying widths, follows the shore-line around the Aegean and Adriatic seas, to Venice, Italy, in latitude 45°, where, however, the orange is not grown successfully for market, but what few are grown require expensive winter protection.

At Lake Garda, the largest of the Italian lakes, and in latitude 46° north, having a peculiar and exceedingly sheltered position, the orange and lemon have been profitably grown for centuries. This, I believe, is the extreme northern limit of profitable citrus fruit-growing in the world.

The eastern shore of Italy is too cold for the

citrus fruits, and only in favored spots along the western shore from Calabria, north to Genoa, can they be successfully grown.

From Genoa, the line passes westerly and southerly along the coast of France to Barcelona, Spain, in latitude 42°, thence in a narrow belt along the sea-coast to latitude 37°, and thence west along that parallel of latitude to the Atlantic ocean, thence north up the coast of Portugal to latitude 41°. Near the southern limits of this isothermal line there are large areas of country in Asia Minor, Thessaly, Calabria, and even Sicily, not adapted to citrus-fruit culture, on account of the extremes of heat and cold prevalent.

Experienced cultivators in these countries claim that a maximum temperature of over 104°, and a minimum of 28° Fahrenheit, are both injurious to the growth of the orange.

While the limit of safety as to temperature may be considered as located within this range of the thermometer, orange-growers in Southern California have found that under favorable conditions both the tree and fruit will bear a much higher temperature and for a brief period a temperature of 22° without serious injury. Shelter from strong winds from any quarter is also a condition of successful culture of this fruit, while sufficient moisture to keep the tree in a healthy, vigorous growth is a necessity.

Soils.

Although the orange tree is found to flourish well in warm, fertile soils, composed principally of sand and loam, or sand and clay, it will not continue productive, for even a brief period, without maintaining its vigor and strength by liberal applications of manure; hence the limit of profit in this direction is very soon reached by the decrease in the crop produced and the increased cost of fertilizers. Orchards depending entirely upon irrigation for their supply of moisture have, I think, a decided advantage over those dependent upon the rain, as the waters used in irrigation both winter and summer, especially in open ditches, carry with them a large amount of fertilizing matter, which can easily be placed by this system to use a common expression, "where it will do the most good."

Varieties.

It is only within comparatively a brief period that horticulturists have recognized the necessity of adapting varieties to localities, to make a success in fruit-growing, and to-day there are many intelligent people who do not know that there is any material difference in oranges, and that they are not ripe and edible as soon as they take on their yellow color.

It is now well known that the whole citrus family is prone to change from differences in soil and climate, as well as from its natural tendency to "sport," when cultivated from seeds after the manner of most of our orchard fruits.

It is also said that in many parts of the West Indies and South America the whole orange tribe is found growing wild, springing up spontaneously from the seeds of the trees originally planted by the Spaniards, varying in size, form, and in every gradation, from the lime to the shaddock. Oranges are often found there equal in flavor and sweetness to those of the Azores, though of much larger size, while others in the same grove vary from these to a degree of sourness and acid bitterness sufficient to draw blood from the mouth accompanied by severe pain.

There you may see the lemon, citron, lime, shaddock and sour, sweet and bitter oranges, growing indiscriminately together in the same forest. They are round, flattened, rough, smooth, obovate, pear-shaped, thick and thin skinned, juicy, dry, some with and others without seeds, some bearing seeds at the end outside of the fruit, while others present a Navel-like protuberance at the same point with no seeds, and in passing through these groves it will be observed that some trees will contain but little fruit, while others will be loaded to excess.

I consider this tendency of the citrus fruit to sport, and its adaptation to localities, as one of the most promising aids, in the hands of intelligent horticulturists, to the gradual extension of citrus-fruit growing into regions now thought to be unfavorable to it. We have already the sour-orange stock, and another from Japan as claimants for superior endurance of low temperatures and moist subsoils, with the power to impart this quality to some extent to more valuable but much more delicate varieties, grafted upon them. The claim for the Japan varieties is, that it will endure for a brief period a temperature of near the zero of Fahrenheit. In the foothills of the Himalayas, and also in the tablelands of the province of Durango, Mexico, it is said there are varieties that are grown successfully within the limits of the snow-line, but the minimum temperature of the region is not given.

There is, therefore, much to encourage the fruit-grower in less favorable localities in a search for varieties that may possess a greater endurance of occasional low temperatures and yet retain the qualities that will commend them to the great orange-eating public.

Markets.

Fruit-growers have long since realized that they may grow fruits successfully, cheaply and in abundance, but owing to many and various causes, the financial result may be a failure, from his inability to secure a market, or, if secured, the cost of placing them absorbs the entire value of the shipment, and sometimes requires an extra assessment to pay freight charges and commissions. As with the decidu-

ous fruits, so with the citrus fruits there are many localities producing the most delicious oranges but entirely too tender for transportation to distant markets. In Fayal and Treceira it has ceased to be exported, not being able to compete with oranges sent from other countries, in the markets of England, the only markets really within reach of so delicate a fruit.

Humid atmospheres and localities along the sea-shores produce this character of fruit, while the more elevated and arid sections produce a fruit equally rich in flavor, but of a tougher texture of skin, able to bear rougher usage and longer transportation. Another point to be considered in regard to markets, especially of the United States, is its appearance in the markets in competition with deciduous fruits, and the season best adapted to its use.

From July to December the great variety of deciduous fruits crowd the markets, and hence at this time the demand for citrus fruits is usually quite limited. Again, from December to March throughout the Northern States, a prevailing temperature considerably below zero materially interferes with the transportation and also discourages the use of oranges to a great extent. It is, therefore, only from March to July when the increasing temperature, especially in malarial districts, makes this fruit so desirable that the great demand usually exceeds the supply, and the profit inures to those localities that can promptly meet it.

Much has been said as to prices and profits of citrus-fruit growing gathered from many localities. Suffice it to say, that in Italy and the eastern shores of the Mediterranean the profit is quoted at \$80 to \$150 per acre. Taking into consideration the known longevity of the tree and its wonderful capacity for producing fruit under favorable conditions, some 20,000 to 38,000 specimens from a single tree, it must be admitted that it is an exceedingly profitable branch of fruit-growing.

A seedling orchard of 80 trees per acre, in full bearing, producing an average of 3500 specimens, about 20 boxes, could be sold for 25 cents per box upon the trees, and realize to the owner some \$400 per acre, and the cost for caring for such an orchard in cultivating, irrigating, pruning, including the price of water, would not exceed \$35 per acre.

In conclusion, it must be said that while this fruit is grown in the exceedingly favorable localities named, yet, as a great commodity of commerce, the principal supply is furnished by points in the Mediterranean below the 38° of latitude. On this continent, on the Atlantic Coast, its successful culture is below the 30th parallel; while on the Pacific Coast, so far, it is below the 35th parallel; but, as I have stated in the beginning of this article, the Anglo-Saxon has put his "hand to the plow," and no one is wise enough to limit his powers in this direction except by an Arctic zone.

State Convention of Fruit-Growers.

The following well-known horticulturists of the State have been selected by the State Board of Horticulture to prepare essays to be presented at the Ninth State Convention of Fruit-Growers to be held at Santa Barbara the second week in April:

A. F. Kercheval, Los Angeles, "A Poem on the Future of Santa Barbara."
L. M. Holt, Riverside, "On the Future of Citrus Culture in California."

James Bettner, Riverside, "Railroad Transportation for Southern California Fruit-Growers."

Frank Kimball, San Diego, "Lemon Culture and Lemon Caring."

Jeanne C. Carr, Pasadena, "Horticulture in Southern California."

J. M. Asher, San Diego, "The Guava Culture in California."

Dr. O. P. Chubb, Orange, "The Future Eastern Market for California Citrus Fruits."

J. W. Salley, Pomona, "Pruning Citrus Trees."

M. Baldrige, Azusa, "How to Propagate Orange Trees."

Alexander Craw, Los Angeles, "Rose Culture and Propagating from Cuttings."

Joseph Sexton, Goleta, "Culture of the Soft-Shell Walnut."

Spencer K. Sewell, Lamanda Park, "How to Dispose of Our Citrus Fruits, and What is Required for Success."

Milton Thomas, Los Angeles, "What Varieties of Fruit Trees to Plant in Southern California."

H. C. Ford, Santa Barbara, "Ornamental Plants and Shrubs."

W. C. West, Fresno, "Fig Culture in California."

A. Scott Chapman, San Gabriel, "The Most Profitable Varieties of Citrus Fruits to Grow."

Hon. Russell J. Heath, Carpinteria, "The Hints and Profits of English Walnuts."

Mr. D. Edson Smith, Santa Ana, "Condition of Orange Orchards in the Santa Ana Valley."

Byron O. Clark, Pasadena, "On Muscat Raisins."

O. N. Caldwell, Carpinteria, "Apple Culture."

H. Goepfer, Santa Ana, "Fruit-Drying."

Dr. O. H. Conger, Pasadena, "Grafting Fruit Trees."

Professor D. W. Coquillett, Los Angeles, "Improved Methods in Chemical Fumigation."

Joel B. Parker, Orange, "Evaporated Fruits."

George W. Ford, Santa Ana, "Soft-Shell Almonds and Walnuts."

W. M. Williams, Fresno, "Shipping Fruits."

I. H. Thomas, Visalia, "Salt and Lime Remedies."

T. J. Swayne, San Diego, "On the Guava."

THE VETERINARIAN.

Ticks or Warts?

EDITORS PRESS:—Mr. D. T. Hall desires to know something as to the nature of certain "granulations" which have grown in the ear of his mare. He says that the part is very sensitive, and she will not readily allow the bridle to be put on. These peculiar growths are not often seen in the ear, but when they do exist in that part they always make the horse very unwilling to have his head handled. Although I have not seen the particular mare in question, yet I entertain very little doubt as to the nature of the "granulations," so called by this gentleman. They are warts, i. e., enlarged papillae. If they were on the nose or the face it would be much easier to cure them. Strong acetic acid or glacial acetic acid is the best medicament, and it should be applied by means of a feather or camel's-hair brush. Great care must be taken that the acid does not run down into the internal ear, else the poor animal would suffer much pain and the remedy would be worse than the disease.

I suggest that a "twitch" is placed upon her lip, as without this she will not allow the acid to be applied. Do not use lunar caustic, as it may break and fall into the internal ear.

R. J. DAWSON, V. S.

Willard's Brick Stable, San Diego.

ASSOCIATION OF VETERINARIANS.—A meeting of veterinary surgeons of this city was held Wednesday afternoon, at which the California State Veterinary Medical Association was organized. According to the report in the *Bulletin*, Dr. Thomas Bowhill was elected president; Dr. T. M. May of Petaluma, vice-president; and Dr. J. G. Fitzgerald, secretary and treasurer. Those named, together with Dr. C. B. Orvis of Stockton, form the executive committee. The objects of the association were stated to be "to promote the science of veterinary medicine and surgery; to propagate a fraternal feeling among its members; to protect the rights and privileges of practitioners, and to elevate the standard of the veterinary profession generally by scientific intercourse." Drs. Bowhill, May and Fitzgerald were elected a Board of Examiners to pass on the qualification of applicants for membership and recognition as veterinarians. The secretary was directed to correspond with all veterinarians whose names can be secured and endeavor to bring them into active sympathy with the new association. An attempt will be made by the society to secure indorsement and material aid from the next Legislature, and it is within the scope of the organization to establish a veterinary college and stations at which proper attention may be paid to manifestations of disease in cattle and horses.

THE GARDEN.

Ground Cherries and Chervil.

EDITORS PRESS:—Your subscriber at Blocksburg can grow alkekengi or ground cherry as easy and in the same manner as tomatoes. A rich, damp, warm soil, or a dry, rich soil, if irrigated occasionally, will give a good crop. The common yellow is the best, and after once planting, there will always be volunteer plants about the place. Of course, it is easy to get rid of them by simply hoeing up the plants one season, allowing no berries to ripen. They are so good and so easily grown, I wonder at their rarity. I think not one land-owner in a thousand knows what they are. Stewed into a sauce, or preserved, they are about equal to strawberries, and are very good fresh from the bush when well ripened.

If this subscriber has not the right kind of seed, I will be glad to give him a few upon receipt of postal card containing his address.

Chervil.

While my hand is at the writing business, I may as well ask what you or your readers know of tuberous rooted chervil—*Chorophyllum bulbosum*. Is there any growing in this State so that fresh seed can be had? I have tried to buy it at our seed stores and failed, but have had it by mail several times from Eastern seedmen, but could not succeed in making it germinate. Have never eaten any, but the books describe it as being about equal to roasted chestnuts. If such should be the decision of my mind after having it on my palate, potatoes would find a poorer market thereafter. I'm not a very great eater, only taking two meals a day, and like but few dishes at a meal, but as the year rolls around it becomes very desirable and pleasant to have the greatest variety of eatables possible to obtain.

Rutherford, Cal.

R. E. WOOD.

[This is very interesting. Now will not other readers take up garden topics? It is just the time of the year for comparing notes and experiences.—EDS. PRESS.]

PATRONS OF HUSBANDRY

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Debris Question.

In view of the essays made, in ways more or less roundabout, to resuscitate the little giant and start the slickens factories again, and considering how many new settlers have come into the State, since the former battle for farmers' rights was won, who are unacquainted with the matters at issue, the following leader from last week's *Sutter County Farmer* seems altogether timely. Brother Ohleyer says:

At the first glance it would seem rather late in the day to undertake the explanation of the debris question, and so it is. But when a measure is before the Congress of the United States looking to the examination of this question with a view to adjust the difficulty between the farmer and the miner, we may well be excused for alluding to the threadbare subject again. And, strange as it may seem, the subject is but little understood outside of those having to battle with it; therefore we conceive it our duty to keep the question before the public in its true light and to correct erroneous impressions which are sought to be fastened on the public mind.

The debris question can only be a question where law and order do not prevail, and where the usages of organized society are set at naught. When all these are observed the question disappears like the fog before a noon-day sun. That the question has gained such a hold in our day, after a slumber of 20 centuries, is a sad reflection upon our boasted civilization, and we stand confronted with the deliberate attempt to undo justice and right and to turn back the wheels of progress, and to once more institute might for right.

To throw our refuse material on to our neighbors' premises without their consent, or into public streams, or on to public grounds, to the injury of the public, is the debris question pure and simple. That this may not be done among our fellow-citizens in the mining regions is most carefully guarded by law of their own making, and as between them it is most rigidly enforced (as innumerable decrees in our law books amply attest). Elsewhere the principle is as sacredly observed as is the right to life, liberty and the pursuit of happiness, and none knowingly dare infringe upon these universally recognized principles.

It is plain, then, to the most obtuse understanding that the "debris question," as between individuals, and as between them and the public, is fully and completely adjusted.

As between the farmers and the hydraulic miners the question stands adjusted in accordance with law and equity by consent of all parties. We say consent advisedly, because after the great Sawyer decision, in the case of Edwards Woodruff vs. The North Bloomfield, the defendants appealed to the U. S. Supreme Court, and without permitting it to come to trial they paid the costs and withdrew the suit, thereby acknowledging the legality and justice of the decision. Thus, as before remarked, the legal issue stands adjusted by the judgment of the Court of last resort and the highest legal power in the Republic. Of course every thinking mind knows now, and knew from the beginning, that no other solution was possible and retain our form of civilization. Imagine for one moment the result to the world of a decision or adjustment on a contrary basis. Not a being in the whole universe could afford to accept it, and least of all could our mountain fellow-citizens abide such an adjustment. For, just as certain as the established adjustment is reversed, the mighty corporations will sluice down to bedrock, not only the mountains but the inhabitants thereof, laying waste mountain, valley, rivers, bays, harbors and cities. Who, in this glorious State, a State so pregnant with the grandest possibilities in the near future, will or dare demand the upheaval of the well-settled adjustment?

THE GRANGE, says *Farm and Home*, is just what the members make it. Some farmers have the idea that if they organize a Grange, the meetings will be made interesting and the organization will be made a power by some mysterious strength incorporated in it. This is all bosh. The Order of Patrons of Husbandry has a splendid constitution and by-laws, and a compact, business-like organized basis, the very element of strength and perpetuity. But all these essentials, while they are the foundation of success, are of no account unless the members take hold in active earnest and make the meetings interesting and instructive, thus keeping up the interest in the Order. And the more thoroughly this is done, the more direct will be the educational, social and financial benefits of the Grange. But let nobody join the Grange, or a farmers' club, or any other organization, unless he is ready to do his share to make it a success. Every member has an individual responsibility that he should feel and do all that lies in his power toward making the organization a success in every way.

SISTER LANDER of Martinez, though still weak, is convalescent and has ridden out. She speaks gratefully of the thoughtful kindness of Grange friends during her illness.

Against Biggs' Bill.

Since our last issue went to press, news has come from Washington that Representative Biggs' bill, providing for a commission of Government engineers to reopen the hydraulic mining question in California, has been favorably reported to the House. Meanwhile the Anti-Debris Association has not been idle, but has drawn up and put in circulation the following memorial to Congress, which protest has been signed by the supervisors of Yuba and Sutter counties, President Stone and others, and will doubtless receive the signatures of the farmers and business men of the valley generally:

The undersigned, believing that such investigation is uncalled for, beg leave to submit a few reasons why this bill should not become law.

First—The question has already been investigated by United States and State authorities, reports of which are on file in the appropriate departments at Washington and Sacramento, and in all its bearings been passed upon by the United States Circuit Court of California in the celebrated Sawyer decision, said decision having been appealed from to the United States Supreme Court, and by the appellant withdrawn previous to adjudication. By that court the decision of the lower court has been accepted as a final settlement of the issue.

Second—A re-examination can add nothing to the information now on file, but may renew and prolong an agitation that will injure both sections and that can only end in the complete affirmation of the adjudication as made by both Federal and State Courts; also the opening of this question, as proposed, creates a feeling of unrest to the people of the great Sacramento valley, who have spent hundreds of thousands of dollars to preserve their homes, the valleys, navigable river channels and incidentally the bay and harbor of San Francisco.

Third—Hydraulic mining being a private industry prosecuted for private gain, in which the Government has no interest whatever, the appropriation of funds for the purpose proposed in the bill is inconsistent with governmental policy.

Fourth—For the truth of all these assertions we most respectfully refer you to the documents on file at Washington relating to the debris question, and also to the uniform decisions in numerous cases tried by all the courts, both Federal and State, against the use of river channels as places of deposit for mining tailings; and we also beg to refer you to the last River and Harbor Act relating to this question and to the harbor of New York, approved August 5, 1886, and found on pages 4 and 23, respectively.

Debts of Subsidized Railways.

We have received a letter from John Marshall of Sebastopol regarding the report of the commission on the Pacific railroads—that they have found fraud—and the majority's recommendation that the corporations be allowed 50 years in which to pay their debt. "In other words," he says, "they recommend that our respectable Uncle Sam be put in this dirty pen along with the other pigs."

"No! No terms with fraud. . . . Collect all dues and damages and then let the parties alone. I will tell you how this may be done. The Government can annul its second mortgage and change to an open account with the railroad, then sue and collect all that may be due. There is plenty of property there, and the stockholders will have plenty left to live on."

GRANGERS' INSURANCE.—There are two Patrons' fire insurance companies in Maine, in which the cost of insurance has been less than one-half the expense in stock companies. The Oxford county company has about 800 policies outstanding to the amount of \$810,000; losses last year, \$283.06; salaries and expenses, \$78; cash on hand, \$665; C. H. George, South Paris, secretary. The Patrons of Androscoggin have 1200 policies to the amount of \$250,000, with \$50,000 in premium notes, \$1400 in cash, \$3300 losses last year, and only \$175 for officers' salaries and all expenses; the secretary is F. A. Allen of East Auburn.

BENNETT VALLEY GRANGE is hearty and thriving. W. M. Whitaker writes to the *Patron* that they conferred the fourth degree on three brothers and two sisters last week, initiated another sister in the first and second degrees, and had more applications for membership, not to mention a sumptuous harvest-feast and subsequent speeches and music in open meeting. "A more enjoyable time was never spent in Bennett Valley Grange hall."

THE *Patron* this week republishes the National Grange's "Declaration of Purposes," together with the National Lecturer's instructions how to organize a Grange and reorganize one that has become dormant. We do not know where else so much practical information about the Order can be found upon a single page. Copies may be had of the Secretary of the State Grange, 220 Market street, S. F.

TARIFF DISCUSSIONS are still prevalent in the Granges. Besides Temescal, San Jose and Sacramento have lately been engaging in them, and Stockton proposes to wrestle with the problem next Saturday, when all interested Patrons are cordially invited to take part.

SACRAMENTO POMONA GRANGE, at a special meeting on the 9th instant, adopted the plan reported by a committee for a Patrons of Husbandry Mutual Fire Insurance Company. Another committee on constitution and by-laws is to report later.

Death of Joel Russell.

There is a strange and impressive dignity about death that compels attention, come when it may or under whatever circumstances. Its presence banishes all that is light and frivolous, and bids us think upon the change to which we all hasten. It is always a surprise and we are never quite ready to give it a welcome. We know that it is inevitable, that it is as common as birth, and is no respecter of persons. Still, though it come in old age, in life's late afternoon, or at the close of a long and wasting sickness, and we have had ample time to be prepared and reconciled to the event, when the whisper goes round the room that some one we loved or honored had gone, we start as out of a horrid dream, and in the fresh torrent of our grief refuse to be comforted.

These were some of the thoughts that rushed through our mind when picking up a paper the other morning we found our old friend, Judge Joel Russell, was no more. Only a few days before we had the pleasure of lunching with him in this city and he boasted of feeling unusually well. The slight paralytic shock he received about two years ago had greatly abated and he seemed the picture of health and talked with his usual vivacity about the fair promise of an abundant year. Last Sunday he was out riding and seemed to enjoy keenly the beauty of the day. In the evening, seated in his room talking pleasantly with a few friends, he suddenly threw up his hands and exclaimed, "Something is the matter with my head," and almost instantly passed away. Born in Waterford, Maine, in 1822, he was about 66 years of age.

He has always been recognized as a prominent and leading citizen, and with credit served the people of Alameda county one term as County Judge, associated with the late Judge Addison M. Crane. Though long an ardent supporter of the Republican party, his strong convictions in the direction of high moral reforms led him to espouse the cause of prohibition, and of late years he has been one of the recognized leaders of that movement in this State. In 1886 he was the Prohibition candidate for Governor. He was also an influential member of the Patrons of Husbandry, and had held some important positions in that organization.

Judge Russell is one of the pioneers. He came to this State in 1850, took up his residence at Stockton, but two years later purchased a ranch in Alameda county near Haywards, and engaged in the fruit industry, and was successful in amassing quite a handsome fortune. And thus year after year we witness the departure of that hardy and enterprising generation that laid the foundation of the greatness and prosperity of this State. Weary and exhausted by age or disease, one by one, they drop by the wayside, and a new generation will soon fill the places they occupied and carry on the work they commenced.

Judge Russell married Miss C. M. Barrett in 1856, who, with a daughter and two sons, survives him. We tender them our profound sympathy in this great affliction, and commend them to that infinite Love and Care that doeth all things well. A good neighbor, sterling citizen, a man of irreproachable domestic character has passed from our midst, and the vacancy created by his death in social and business circles will not be easy to fill.

INDORSES THE RESOLUTIONS.—W. H. Mullen of Big Bend writes: "I heartily indorse the resolutions of the Santa Rosa Grange in regard to taxing liquor and tobacco. I do not see why the Granges and the Good Templars and the prohibitionists do not join issues on that very important question, and we would soon put an end to the abominable traffic."

THE Anti-Saloon Republican National Committee have issued a call for a National Conference to be held in New York City, April 18th and 19th, "to assure and signalize the complete withdrawal of the National Republican party from complicity with the saloon infamy and to emphasize the positive antagonism thereto."

TEMESCAL GRANGE, at its regular meeting last Saturday afternoon, had the pleasure of welcoming Bros. Webster from Creston and Field of Maine. Washington's birthday was commemorated a little in advance, and there was some discussion on the tariff.

DISTRICT LECTURERS.—Worthy Master Overhiser has done wisely and well in appointing those veteran and efficient Patrons, Bros. G. P. Loucks and S. T. Coulter, Lecturers for Contra Costa and Sonoma respectively.

MAGNOLIA GRANGE, after two postponements on account of bad weather, got her officers installed last Saturday, and feels the better prepared to go on harmoniously working for the Good of the Order.

OREGON GRANGERS make good showing nowadays in their letters to the *Patron* from week to week.

ENTERPRISE GRANGE is increasing in numbers and preparing for a grand reunion in April.

THE trustees of San Rafael have adopted an ordinance to prevent the selling or giving tobacco to persons under 16 years of age. The fine may be \$5 or \$50 for each offense.

AGRICULTURAL NOTES.

CALIFORNIA.

Fresno.

VIGILANT AND PROMPT.—*Fresno Republican*, Feb. 17: Here of late a number of boxes of oranges have been shipped to this city, and in every instance the fruit has been found to be covered with the red scale. Yesterday the fishman, best known by his nickname of "All Alive," was found to be peddling red-scale oranges, and a number of gentlemen clubbed together, bought his load of fruit and burned it. "All Alive" said that he was ignorant of the fact of the fruit being infected, and also that hereafter he would have the fruit he received inspected before attempting to sell it. . . . In this connection it may be mentioned that the Board of Supervisors yesterday made an order appointing S. H. Cole inspector of fruit for this city. Mr. Cole will enter upon his duties at once, and will see to it that no fruit infected with the red scale or any other pest is sold here. The supervisors were in doubt as to their authority to make such an appointment, but realized the necessity of protecting our orchards against infection, and hence very wisely made the appointment and will investigate later. If they have no right, then they will see that the proper authority appoints some one, but in the meantime Mr. Cole will bar the door against the bugs.

Inyo.

TWIN-BEARING HEREDITARY.—*Inyo Independent*, Feb. 18: Three or four years ago Mr. J. B. Stewart of Big Pine bought a bull that was a twin. The first heifer from the bull bore twins, and recently one of these twins has given birth to twins. All the progeny of the bull are good, thrifty animals.

Lake.

SCOTTS VALLEY DOINGS.—*Cor. Avalanche*, Feb. 10: The farmers of Scotts valley have been improving the pleasant sunshiny days of the past week. On all sides can be heard the woodman's ax, while others are preparing their land for grain. Land has become too valuable to lie idle, and in a few years the large oak forests will all be cut down. [We hope not "all."—EDS. PRESS.] Several are putting in grain on their farms. A number are setting out fruit trees. G. Scudamore will add several hundred trees to his already famous orchard (He is the possessor of two diplomas from the N. O. Exposition). Porter Clendenin will set out six acres of Bartlett pears. Mr. C. sold his entire crop of Bartlett pears in S. F. the past season for four cents per pound. The trees, though young, bore 600 pounds to the tree, bringing him \$24 for each tree. Ed Vickroy will plant several hundred trees on his mountain land, mostly peaches. Charlie Griner will plant four acres of French prunes. Others will set out fruit in smaller quantities. The proprietors of the two nurseries here will endeavor to supply all demands for trees the coming season. People are beginning to appreciate home-grown trees.

Los Angeles.

EDITORS PRESS:—Seeding is progressing rapidly, and will continue all through this month and perhaps extend into March. Grain generally is looking well and has grown fast since the cold abated. The new growth of alfalfa is from 12 to 20 inches by actual measurement. Hay has an upward tendency, retailing in Pomona at \$20 per ton. The plowed land is reaching far up the hillsides. Every available horse is being pressed into service, and yet there will be land untillied. We look for a greater fall in hay this year than there has been in town lots, which, by the way, are a little below par just now. . . . I am informed that there is a joint-stock company forming in this valley to buy a steam well-borer to search for artesian water. This, I think, is the right way to advertise a country, by letting the passer-by see the thrift and energy of the people. Quite a shower fell last night, and it is still raining, with prospects for more.—D. J. O., *Spadra*, Feb. 16th.

A TRULY FROSTLESS BELT.—The Santa Monica Outlook lately thanked George Killen, who lives at the base of the mountains, about six miles northeast of Santa Monica and a mile north of the Sunset tract, for a present that would be a great novelty at this time of year to people living outside of a few favored spots in Southern California. This present consisted of a basket of large, ripe tomatoes just plucked from the vines. The tomato, as many well know, is a plant that succumbs to the slightest touch of frost. It is therefore one of the very best tests of superior climatic conditions. In most localities, even in Los Angeles county, the tomato vines were killed by the late unprecedented "cold snap" that visited Southern California. It will therefore be seen that the foothills in this locality lead all other places as being, *per se*, the frostless belt.

BUSY TIMES AT SAN FERNANDO.—*Cor. L. A. Times*, Feb. 18: While the weather has not been favorable all the week for pushing outdoor work, a good deal has been accomplished in the way of improving. The Wallace brothers have been busy laying off walks and driveways, and putting the grounds in order around the hotel, preparatory to setting out flowers and ornamental trees. . . . The teams have about finished plowing for barley on the Porter ranch, and will begin on Monday to break ground for the 480 acres to be planted in oranges. In ad-

dition to this large body to be set out this year, 34 parties have taken 330 acres under contract to set out at least one-half of it in citrus fruits before the 1st of May, and many of them will put out all they have purchased. Among the buyers is the Barnard & Benedict Crystallizing Co., who will at once set out their land in white Arabian figs, with the ultimate purpose of establishing a branch of their business here. . . . The newly planted grain-fields and volunteer grasses have responded to the rain of Thursday and Friday, and on every hand we see the promise of a bounteous harvest and prosperous season.

Modoc.

FARMERS PLOWING.—Adin *Argus*, Feb. 9: If man could arrange the weather to his own desire, a more pleasant winter than this could not be had. The first day of February found plowing being done (not by many, of course, but by two or three small farmers), and this week there are no small number of the tillers of the soil turning down the face of mother earth. Our lower country neighbors may think us rather late, but it is seldom the first of a winter month brings to us warm and dry weather and the initiatory steps to the season's farming.

Napa.

WINTER PEARS.—Napa *Register*, Feb. 17: Geo. Wildberger this morning left at this office a dozen good-sized pears that possess excellent keeping qualities. Said he: "I always have pears the year round. This variety, the name of which I do not know, will keep until the earlier varieties ripen." We found them to be of fine grain, excellent flavor, juicy and altogether a pear that must prove profitable for the grower.

Nevada.

A FRUIT-GROWING MEDICO.—Grass Valley *Tidings*, Feb. 18: The planting of between 750 and 800 fruit trees was completed at Dr. W. C. Jones' farm at Newtown yesterday. There are about 2400 trees in his orchard, comprising Bartlett pear, apple, peach, prune and others. Last year 6000 vines were set out, about one-half of which were placed in low land. As the low-land vines have not done well, and for the further reason that a new ditch makes alfalfa a more profitable crop in this particular spot, the vines have been plowed up and will be transplanted. All this orchard and vineyard work has been done in two years, and in two years more the doctor will have a profitable piece of property that will annually return increasing revenue.

San Luis Obispo.

NATIVE VINE.—San Miguel *Messenger*: H. M. Maxwell of Indian valley brought to this office this week a sample of the *vitis Californica*, grown from seed planted last April. The vine has made a growth that is almost marvelous, the root having gone to a depth of over 2½ feet and is half an inch in diameter. This native grapevine is said to be the best stock on which to graft the less hardy grapes, and from the sample it would be supposed to have remarkable vigor and vitality. Mr. Maxwell is preparing to plant a vineyard of this stock, and will graft to choice varieties.

San Joaquin.

ATLANTA MINUTES.—Cor. *Independent*, Feb. 14: Seeding time is now past and the farmers are plowing their summer-fallow ground. The prospects for a large yield are very good. . . . The hog-cholera has done quite a destructive work among the swine. Luckily there were some hogs that the disease did not reach. In consequence of the loss, pork is now selling at a high figure. . . . An unusually large number of coyotes have been seen prowling about this section this season—as many as five at one time.

Santa Barbara.

OLIVES IN THE SANTA YNEZ.—Santa Barbara *Independent*, Feb. 18: Alden M. Boyd has shown us some extremely handsome specimens of olives grown on his place in the Santa Ynez valley, picked since the cold weather, which many feared might injure olive trees unused to such a comparatively low temperature. But Mr. Boyd assures us that all the trees in the Santa Ynez are uninjured. Even the fresh shoots of the trees are as healthy as ever. At Mayor Coffin's office may be seen specimens of the olives lately picked, which are uncommonly large.

MONSTER MUSHROOM.—E. C. Tallant brought in from the Hope ranch yesterday a magnificent mushroom, measuring 8 inches in diameter and 25 inches in circumference. It occupied a whole frying-pan and made a fine dish.

Santa Clara.

FIFTH DISTRICT AGRICULTURAL ASSOCIATION.—San Jose *Herald*, Feb. 20: A meeting of the directors of the San Mateo and Santa Clara District Association No. 5 was held at the office of Montgomery & Rea Saturday afternoon, at which there were present J. W. Rosa, Ed Younger, Sam Rucker, H. H. Main, Ed Topman and G. H. Bragg. Mr. Bragg was elected secretary pro tem, and was instructed to cast the ballot for Ed Topman for president and DeWitt Tisdale for treasurer for the ensuing year. Mr. Younger submitted a statement showing that the society was \$1800 in debt. The question of consolidation with the Santa Clara Valley Society was then taken up. The proposition made by Mr. Younger was that the Santa Clara County Society pay the District Association this sum this year and take the State appropriation of \$1800. In case agreement of this kind was made, the Santa Clara Valley Society would have the entire field to

itself and could conduct the races and agricultural fair without opposition. Three of the directors present are also members of the other society. As they are aware that the debt was incurred by improvements at Agricultural park, they expressed themselves as willing to assume the liability, but would not agree to pay it all in one year. They hold that under the law the society cannot go in debt, and suggested that if they be allowed a clear field and to take the State appropriation they would pay out of this sum \$900 this year and \$900 next year. There was but little difference between the societies as to the plan of settlement, and it was thought that there would be no difficulty in adjusting the matter.

Santa Cruz.

FAIR ASSOCIATION.—Pajaronian, Feb. 16: The directors of the Pajaro Valley Fair Association met Saturday at the town-hall, Mrs. A. P. Roache presiding. The report of Treasurer Uren was read and accepted. It showed the total receipts of the fair to have been \$1666.25, and the disbursements \$1058.87, balance on hand \$607.38. The treasurer was instructed to turn over to the secretary all bills and vouchers of the late fair association. The resignation of Mrs. M. E. Tuttle, as a director of the fair association, was read and accepted and Mrs. Tuttle was tendered a vote of thanks for her faithful and valuable services while a member of the board. Mrs. Libbey resigned the secretaryship of the board. Julius Lee was elected a life member of the association as a recognition of his valuable and gratuitous legal services for the board. The directors of the former Pajaro Valley Fair Association were elected life members. . . . Adjourned to March 10th.

Solano.

GRAIN IN THE MONTEZUMAS.—Denver *Republican*, Feb. 17: The area seeded is the largest for many years, being about three-fifths of the agricultural land of Eastern Solano, and from present indications the yield will be as abundant as the area under crop is great in extent. During the prevalence of the extreme cold weather several weeks ago, it was feared that wheat which had been planted shortly previous would be injured and its vitality destroyed; but the alarm proved to have been false, as the grain-fields, as far as the eye can reach, are covered with a healthy, luxuriant growth of young grain. The cut-worm, which has proved a formidable ground pest in this section for many years, either froze to death or has taken refuge deeper in the ground, for his work of destruction to the young grain is not as extensive this season as heretofore, and the black bare patches which invariably marred the beauty of almost every wheat-field are rarely to be seen this year.

FLOCKS FARED HARDLY.—While grain-growers are in the best of spirits over the prospects, stock-raisers have less reason to rejoice. Cattle are poor and many have died. Sheep-raisers are unfortunate this season because of the scarcity of feed and the extreme cold weather which combined to work sad havoc among the sheep-herders in Denver township. W. D. Merrill, who owns a large flock, informed us a short time ago that 50 per cent of his lambs and many full-grown sheep died during the January storm. Zack Bethel, whose flock consists of several thousand selected Shropshires, also lost a large number of lambs, notwithstanding the care given them by three men whom he had employed. Dead sheep and lambs are to be seen in almost every field in which sheep are kept; and it may be the carcasses that attract to the sheep ranges valuable dogs and worthless curs from far and near, causing the sheep-raiser uneasiness of mind for the safety of his flocks. A war of extermination is periodically waged on these perambulating canines by means of strychnine with which dead sheepmeat strewn over the ranges is liberally seasoned.

Sutter.

SEEDLINGS FROM FRANCE.—Sutter *Farmer*: James T. Bogue, one of the Sutter county nurserymen whose depot is in Marysville, has lately received from Southern France over 700,000 seedlings of fine quality and variety which he will plant for budding and grafting purposes in his large nursery a few miles below Yuba City. Mr. Bogue's stock is immense, and he says he has never seen anything like the demand for trees this season. He intends to plant in this county this spring over a million stocks of various varieties of trees and 100,000 grapevine cuttings.

Tulare.

LEVELING HOG-WALLOWS.—Visalia *Times*: William Mehtrens of Lewis Creek has a hog-wallow leveler of his own invention at work on his ranch. The machine consists of two scantlings 24 feet in length, bolted together with 10-foot scantling on which are fastened iron plates with the lower edge sharpened. The ground to be leveled is first plowed, and then this long sled is dragged over it, which pulls the loose dirt on the knolls down into the hollows. Mr. Mehtrens had quite a number of acres over which it was difficult to run a header on account of the hog-wallows, and he devised this cheap method of leveling it. Twelve to 16 head of horses are used in dragging the leveler, which accomplishes the work designed in a satisfactory manner, and on which there is no patent.

SHIPPING FIREWOOD SOUTHWARD.—Several carloads of wood have been shipped from this city to Los Angeles, and W. W. Stousland goes thither to perfect arrangements for forwarding a large quantity. It is quoted at \$18

per cord in Los Angeles, while coal is scarce and selling at from \$20 to \$25 per ton. The present demand for wood is likely to denude our forests of oak trees within a very few years.

Yolo.

PROSPECTS ABOUT DAVISVILLE.—Woodland *Democrat*, Feb. 16: Farming is progressing slowly on account of the weather, and each day diminishes the prospect of heavy yield from winter-sown wheat. Barley and early-sown wheat are looking well, however, and give promise of a heavy crop. The January frosts did, some damage to the grain on the adobe soils, but from this it may yet recover, and with favorable weather hereafter there are good prospects throughout our section. Treat & Lennox are planting a nursery of 300,000 trees, comprising almonds, prunes and peaches.

SUB IRRIGATION.—Dixon *Tribune*, Feb. 18: Irrigation will shortly begin on the Briggs estate and continue until the ground is thoroughly saturated. The system adopted in this vineyard is what is known as the sub-irrigation system, invented by a resident of Los Angeles. Over 200 miles of pipe are employed in conveying the water to the various sections. These pipes are of concrete and range in size from the mains two feet in diameter to the feeders of two inches.

ALFALFA CROPS.—Woodland *Cor.* Winters *Express*, Feb. 16: Four cuttings of a 15 acre tract of alfalfa meadow, belonging to R. B. Blowers, yielded 13 tons of hay to the acre, which was sold at \$9 per ton in the field. The fifth cutting was thrashed and yielded about 400 pounds to the acre. Mr. Blowers feels confident that the fifth crop would have yielded two and one-half tons of hay per acre.

ARIZONA.

PULSE AND CABBAGES.—Florence *Enterprise*, Feb. 11: H. G. Ballou has a field of grown cabbages that withstood the unusually cold weather of the past winter without showing the least damage. The heads are now large and solid, and his experience demonstrates the capability of this valley to grow vegetables during the entire winter months. He has also green peas now ready for use that were grown during the winter. The people of this valley have hardly begun to learn the possibilities of the soil and climate.

NEVADA.

NEVADA CLIPS PREFERRED.—Elko *Free Press*, Feb. 11: Nevada wool commands better prices than any other clips. Justin, Bateman & Co., wool commission merchants of Philadelphia, in their circular under date of January 24th, give the following facts in regard to Nevada wools: "Notwithstanding the lack of demand for other Territorial wools, the fine clips of Nevada, which are particularly suited to the present wants of manufacturers in this market, owing to their softness of finish, are inquired for to-day and command relatively better prices than other Territorial wools. The market has been cleared of these qualities, and much more could be placed immediately at full quotations."

A GARDEN SPOT.—Virginia City *Enterprise*, Feb. 17: Mason valley now presents a verdant and beautiful appearance. Dr. Kirby, who visited the valley two or three days ago in answer to a professional call, expresses himself as astonished and delighted with what he saw. The only snow visible was on the Sierras, 40 miles distant. The ground in the valley is dry, and farmers are engaged in plowing. The alfalfa fields are showing up finely, green and beautiful. All the people of the valley are flourishing and in high spirits, making money, and at the same time improving their lands and surroundings, as regards buildings, orchards and the like. They claim to have the garden spot of Nevada.

TENTS FOR HARVEST HELP.—Some one has been suggesting to the Vacaville *Reporter* that tents could be secured cheaply for the use of transient help during the harvest, and the suggestion appears to be a good one, as each crew occupying a tent in the orchard, which would easily accommodate from four to six persons, would not object to paying a dollar or so per week for its use, and in a few weeks the amount paid out for the tent would be refunded, and at the close of the season it could be stowed away for future use, and not remain cumbering the ground as a building would. This is worth considering, as a number of tents could be grouped together, and the occupants could form "messes" in army style, selecting some one of their number as cook, and so everything could be run smoothly.

GREAT RABBIT DRIVE IN PROSPECT.—They have been making elaborate preparations in Fresno to have a grand rabbit-drive next Sunday, February 26th, west of Selma and south of the colonies. Meetings have been held and committees appointed; excursions are planned from north and south; a barbecue at the close is probable, and altogether the managers are endeavoring to arrange a sweeping slaughter which shall beat even Bakersfield's record.

THE Annual Stallion Exhibition at Livermore is to be held Saturday, March 10th. Entries will be made from Alameda, San Joaquin and Contra Costa counties, and the show is expected to surpass all its foregoers.

What a Traveler Thinks of Modest

EDITORS PRESS:—Some time ago I partly agreed to give the readers of the *RURAL* a few of my individual opinions about the little city of Modesto, the county seat of Stanislaus county.

This beautiful town is situated on the northern bank of the Tuolumne river, and is bisected by the S. P. R. R., which cuts the city into almost equal portions, although at present most of the private residences and nearly all the business houses are on the northeastern side of the railroad.

The city is laid out on a generous plan; wide streets and large blocks, with cross alleys, making it a very convenient town to get around in. It can boast quite a large number of fine business blocks, several banks, some very imposing public buildings, as the court-house, public school, etc., and in the line of elegant private residences Modesto competes with any city of her size in the State. Business is dull here just now, but if the prospect for a large wheat crop continues as favorable as at present, the time is near when Modesto will "boom" again as she did in 1880.

Speaking of dull times reminds me of what Gov. St. John said in one of his stirring speeches which I had the pleasure of listening to in this place a few weeks ago. Referring to the old stock argument of the liquor men, that if you stop saloons you injure the business of the towns, the Governor said he had been told several times since coming here that, "in spite of their 30-odd saloons" business was a little dull at present, and he advised them to apply their own logic and double the number of saloons, and, as a matter of course, the business would be doubled immediately. "Don't you see?" My private opinion publicly expressed is that what Modesto and the surrounding country needs worst or best of all is more water and less whisky.

If the Supreme Court sustains the legality of the Wright Irrigation bill, the outlook for an abundant supply of water is very bright; but the prospects for the curtailment of the sale of the stronger liquid are not very flattering, although the temperance element is up and doing, and I earnestly hope they may succeed in the near future in driving every saloon far beyond the limits of their beautiful city.

But as I did not start out with the intention of writing a temperance essay, I will close for the present, and take up the line of march for Merced county, from which you will probably hear from me again—provided that some one or more of your readers don't get "riled" and choke me for this. W. W.

THE BOTAN PLUM IN PLACER.—C. M. Silva & Son, the Newcastle and Lincoln nurserymen, write us, under date of Feb. 18th, as follows: We have fruited the Botan plum (described and illustrated in your issue of this date) for several years. Your cut is a good representation of our Botan; color, red; shape, oblong. It is the earliest to ripen of any of the Japanese plums, and like them all is remarkable for firmness and keeping qualities. Its desirable color, firmness, and early ripening will undoubtedly make it a valuable fruit for Eastern shipment. The tree is a much more vigorous grower with us than is the Kelsey; healthy and upright. It comes early into bearing, one-year-old trees in the nursery rows being often loaded with fruit. It is well worthy of extended trial.

GRAPE GROWERS' MEETING.—E. H. Rixford, secretary, reminds us of the approaching annual meeting of the Grape-Growers' and Wine-Makers' Association of California, which will be held at Pioneer hall, Fourth street, near Market, San Francisco, on the 6th day of March, 1888, commencing at 11 o'clock A. M., when the annual election will take place. The afternoon and evening will be devoted to discussion. During the remainder of the week the convention under the auspices of the Viticultural Commission will be held at the same place, to which members of this association are invited to send exhibits.

IN BEHALF OF HOME FRUIT GROWERS.—A dispatch from New York, 21st, states that members of the N. Y. Mercantile Exchange and others engaged in the fruit trade have petitioned Congress to protect the fruit-growers of California, Florida and other fruit-producing States, by retaining the duties now imposed on foreign fruits; also, to repeal the law relating to damage allowance on oranges, lemons, dried fruits and nuts of all kinds.

HERE, INVENTOR!—Henry Mohr, a successful barley-grower of Mt. Eden, lately remarked to the *Haywards Journal* that something which has long been needed in the invention line, and would be a boon to farmers, is some device that would separate the wild oats from the Chevalier. It is true we have succeeded in having pretty clean grain by cleaning our land, but still the wild oats will show themselves as the grain ripens.

AN OUTLET FOR OWEN'S VALLEY.—The Carson & Colorado railroad will probably be soon extended from Keeler, Inyo county—its terminus at present—to connect with the S. P. R. at Mojave. This will be of inestimable advantage to Owen's valley and render its rich land far more desirable for settlement.

A Plea.

Columbia, large-hearted and tender,
Too long for the good of your kin
You have shared your home's comfort and splendor
With all who have asked to come in.
The smile of your true eyes has lighted
The way to your wide-open door;
You have held out full hands and invited
The beggar to take from your store.

Your overrun proud sister nations,
Whose offspring you help them to keep,
Are sending their poorest relations—
Their unruly, their vicious black sheep.
Unwashed and unlettered you take them,
And lo! we are pushed from their knee;
We are governed by laws as they make them,
We are slaves in the land of the free.

Columbia, you know the devotion
Of those who have sprung from your soil;
Shall aliens born over the ocean
Dispute us the fruits of our toil?
Most noble and gracious of mothers,
Your children rise up and demand
That you bring us no more foster-brothers
To breed discontent in the land.

Be prudent before you are zealous—
Not generous only, but just;
Our hearts are grown wrathful and jealous
Toward those who have outraged your trust.
They jostle and crowd in our places,
They sneer at the comforts you gave;
We say, shut the door in their faces
Until they have learned to behave!

In hearts that are greedy and hateful,
They harbor ill-will and deceit;
They ask for more favors, ungrateful
For those you have poured at their feet.
Rise up in your grandeur, and straightway
Bar out the bold, clamoring mass;
Let sentinels stand at your gateway,
To see who is worthy to pass.

Give first to your own faithful toilers
The freedom our birthright should claim,
And take from these ruthless despoilers
The power which they use to our shame.
Columbia, too long you have dallied
With foes whom you feed from your store;
It is time that your wardens were rallied
And stationed outside the locked door.

—Ella Wheeler Wilcox.

Joaquin Miller in the South.

EDITORS PRESS:—Jay Gould has no interest
or influence whatever in all that new network
of railroads which is now being woven up and
down the once arid regions of our Republic
known as the Far Southwest. Was he pre-
vented from extending his lines in that direc-
tion because before the discovery of the arte-
sian well he could find no water there with
which to water his stock?

The road from San Bernardino is a bold and
curious work. Its bed is as rolling and un-
dulating as the stormiest sea. The scenery
is rocky, ragged and full of fine surprises.
Nothing can be imagined finer than the wide
reach of orange lands, with little towns in
the midst of laden groves, away down in the val-
ley under us as we climbed up about the fertile
hills that hung above Riverside. New towns
all along here; tents, half-built houses, the
clatter of saw and hammer, the roar of progress
in the air.

At one place I noticed an enterprising com-
pany of town-builders had plowed up about 40
acres of sagebrush and sand and planted the
whole field with little white stakes; no house
was yet visible.

If this generous use of stakes continues, why
would it not pay to incorporate under the
name of "The Great Town Lot Stake Co.,"
and furnish stakes solely to those who use
little else in making new cities?

We saw new grass knee-high all along here
and seas and seas of flowers. Many contented
herds of cattle rested along the way. But now
and then a circle of ravens up against the
sapphire skies told very well that the grass
had not always been knee-high here, nor the
weather nearly so lamb-like. For many dead
cattle lay on the emerald hills.

You strike the stately old ocean suddenly
about half-way from Los Angeles to "boom-
land," and you have a spectacle that stands
without parallel in the glory of mighty waters.
I have been taken by enthusiastic Englishmen
—born seamen and lovers of the sea are those
bold fellows on their stout little island—to see
long sweeps of mobile water many times. But
there is nothing in England, nothing in or
about all Europe, all the world, I will say
with positive assurance, that can equal the
stateliness of those long and unbroken waves
that thunder in on the snow-white shale here.
Eight thousand miles of unbroken movement
and march have given those great waves here a
precision of weight and majesty that compels
your respect. You stand out on the platform
as you glide on out of the little town of La Mar,
and you stand with uncovered head. Far out
at sea lie black blotches of kelp and seaweed,
with many seabirds, but no ships go up and

down these awful and sublime seas save at
rare intervals. The Governor of the State, with
whom I traveled in this recent trip to the
South, pointed out to me his residence here.
And I can commend his good sense in select-
ing this thunderous sea-beach. The heart of
nature beats stoutly here.

I am told that a railroad is being built, and
indeed is almost completed, which has the surf
of the Pacific ocean for its western fence, and
that you step into the cars near the Golden
Gate and keep right along the sea-sand all the
way from San Francisco to San Diego! Com-
ment on such a work is idle; but how a ride on
such a road would delight the sea-born Briton!

Not seen San Diego? If I had not seen San
Diego as she now is, with all her boom, and
whirl, and rush, and uproar, I would drop every-
thing and go and see her now and at once, while
the spell of creation is upon her. It is a sight
not to be encountered again in a century. It
upsets all preconceived ideas. I had expected
to find a tumultuous, even rude lot of gamblers,
much like the men in the early days of gold.
Nothing of the sort; gamblers they may be here,
but they are mighty good-natured about it all,
and trouble is rarely heard of. No hard words,
no violence, nothing at all but the best of tem-
per and the boldest faith. You never see a
policeman. The crime record is almost down
to a par with any pastoral little village. As
said before, the whole thing is new here, as new
as the new and unpainted towns of ten miles
breadth.

Will it burst? No; for it is not a bubble.
What is back of it? The United States. You
see this is not a sudden thing at all. Five years
ago the red tide little place rose up and quietly
and confidently started for the front. She
walked on leisurely for a year, and then began
to go faster, and so far as I can see, all there is
of it she has simply got good wind, good legs,
good lungs, and is "in for a run; that is all.

You should see one of their good-natured
auctions here; auctions where they sell a whole
city. Maybe nobody has seen the city yet;
maybe the road to it has not yet been surveyed.
But they will complete the survey to-morrow,
lay the ties next week, and before a month is
over the cars will be steaming into the new
town! I can't help repeating for the third
time that the whole business of city building is
so utterly new here that all precedent is upset
and you soon find yourself laughing merrily at
it all and ready to believe with the rest and even
take part in the fashioning of this wonderful
city that is built on air.

There is a place about 15 miles back from
the Bay of San Diego called Sweetwater Dam.
Now I pledge you my word there is not, or
was not a month ago, a single house there.
Yes, tents, thousands of tents, but not a single
house in all this city of Sweetwater Dam. And
yet the cars are so packed and crowded, both
going and coming to and from this town 15
miles out and with not a single house in it,
that people never think of trying to get a seat,
but are quite content to cling on, hold on to
each other like swarming bees. Well, now
there can be no burst to a thing like this, for
there is nothing there to burst. See? And
this is only one example of about forty like
towns from one to twenty miles around. But
of course in most of the new towns, and where
they can get lumber, they are building.

One notable thing here is the new people.
The Greek army under the walls of Troy, the
Argonauts of '49, no body of men in history
that I know of was ever bolder in faith or big-
ger in heart.

"Look here," said Senator Bowers, who
keeps the Florence hotel, the one fashionable
place in San Diego, "look here, I am going
over to the Coronado hotel to live with my
family for awhile the day she opens." Now,
when you understand that the Coronado hotel
is the finest hotel on the face of the earth, and,
of course, the rival of Senator Bowers' fash-
ionable resort, you will begin to understand some-
thing of the spirit of these city builders down
there on the sunlit edge of everlasting summer.

"I am building a little twenty-mile railroad
out to my town in the mountains," said the
governor, "but don't quite see how I am to get
into town."

"Run in on our tracks," promptly answered
the president of an opposition railroad. "Yes,
use our tracks, our depot, anything you like, and
as long as you like!"

Now, of course, I have not space to write
these things down literally and lay roads and
sections down like corduroy roads, and show
the gradual approaches which lead up to the
facts. But what I have set down is substan-
tially the truth and the true spirit that prevails
in San Diego. There is a new flow of blood,
a new force. The best of Boston, the best of
Chicago, the best of New York—shall I say the
best of San Francisco, even?—is contributed
here. And as these people have money, plenty
of it apparently, plenty of good sense, plenty of
pluck, boundless belief in themselves and San
Diego, why, you see there is no telling where to
set the limit to their enterprises.

No, I don't advise you to buy lots there. I
don't believe in town lots anywhere. A man
who loves Mother Earth wants a little more
than a grave; but I do advise you to go and see,
feel, live San Diego, if only for a day.

JOAQUIN MILLER.

Oakland, Feb. 18, 1888.

How Mr. Gilhooley Broke up Two
Setting Hens.

[Written for the RURAL PRESS by M. E. D.]

Mr. Gilhooley bought a dozen hens last
spring to lay eggs, but two of them soon grew
obstinate and determined to set. Now, Mr.
Gilhooley did not wish them to set, and regu-
larly for two weeks, on returning home at
night from his office, did he try, one after
another, all the remedies of which he ever
heard to cure hens of setting, but it did no
good.

Yellow and Speckle clung to their respective
nests in the barn with true feminine persist-
ency.

At last he hit upon a plan that he thought
would be effective. He reasoned thus: "No
matter how well those two hens may agree in the
main point of setting, they won't both want to
set in the same place." Forthwith Mr. Gil-
hooley procured a stout cord some two feet in
length, tied one end of it to Speckle's left
leg and the other end to the right leg of Yellow.

The ki-awk, ki-awk, ki-awk, of the frighten-
ed hens quickly brought Mrs. Gilhooley to the
door, who watched the proceedings in silence a
moment before inquiring in a puzzled tone:

"Whatever are you going to do to those hens
now, Hiram Sylvester Gilhooley?"

And Hiram Sylvester replied:
"I'm going to break those plaguey hens of
their propensity to incubate if it takes till next
winter!"

"Oh, now, Mr. Gilhooley," said the sympa-
thetic lady, "it's natural, you know, and I'm
sure the poor hens are not to blame."

"Humph! I'd just like to know who is,
then," said Mr. Gilhooley, crossly.

When the hens were placed on the ground
they gave a parting ki-awk and with spread
wings darted toward the barn; Speckle got
the first start, and pulling Yellow's leg straight,
jerked her over on her side; this unexpected
hindrance brought Speckle to grief, and the
astonished hens both lay kicking in the dust.
They struggled until close enough together to
right themselves, when they regained their
feet once more. Again and again they tried
their first experiment with the same result,
until finally Yellow concluded to scratch for
grubs and wait for better things.

Speckle discontentedly sat down to rest, but
presently she again concluded to go home, and
in spite of a clucking remonstrance, pulled the
philosophic Yellow from her breakfast.

"Those hens remind me of married life,"
mused Mr. Gilhooley. "A man gets tied to a
discontented wife, and she is always hauling
him away from comfort." Mrs. Gilhooley em-
phasized this wise remark by slamming the
door, when Mr. Gilhooley consulted his watch
and found himself overdue at the office.

The poor hens passed the day in futile at-
tempts to reach their nests.

That night, when Mr. and Mrs. Gilhooley
were taking their tea, suddenly a great
squawking caused them to rush in the direc-
tion of the barn.

Mrs. Gilhooley grabbed the lamp, exclaim-
ing: "Sylvester, some one is stealing the
chickens!"

Out they both rushed, but as Mrs. Gilhooley
flung open the barn-door, the sudden draft
blew out the light, leaving them in total
darkness.

"I'll go back after the lantern," gasped Mrs.
Gilhooley, hurrying toward the house as fast as
she could in the dark.

A few days before Mr. Gilhooley had purchased
a young horse, which was standing untied in his
stall. Evidently he wished to investigate the
cause of the commotion, for he ran out of the
open barn door, flinging the astonished Mr.
Gilhooley full length with such haste that he
yelled "Fire! Murder! Thieves! Police!" be-
fore he realized what had happened. As quickly
as possible he scrambled to his feet, brushed off
the straw and dirt from his ample person, all
the time repeating interjections to himself with
unusual force and rapidity.

When Mrs. Gilhooley returned with the
lantern they proceeded to investigate the
chicken-roost. There they found the two set-
ting hens suspended by the legs, fluttering and
squawking in terror. They had managed in
some way to reach the perches, one just above
the other, but an inadvertent jerk by the lower
hen had thrown the other over, and there they
hung suspended, being unable to get either up
or down.

A noise in the direction of the kitchen garden
next attracted Mrs. Gilhooley's attention.

"What's that in the garden?" she whis-
pered.

"It's that confounded horse, he's loose,"
Gilhooley replied. "You stay here while I go
and catch him."

"Oh, Sylvester, I'm so afraid it's a burglar."
"Burglar, indeed! I rather guess I know
it's a horse," saying which Mr. Gilhooley crept
softly along the fence in the direction of the
noise.

Immediately the horse gave a frightened
snort and galloped around the lot. He repeated
this until Mr. Gilhooley, losing patience, started
across the backyard to head him off. Now,
Mr. Gilhooley is a large man and attains vast
momentum in running, so that when he struck
the clothesline it sent him rapidly backward
several feet, and in attempting to keep his
equilibrium he came in violent contact with the
wheelbarrow, over which he sprawled, landing
much in such a position as a mammoth toad ex-

hibits on alighting from an unusually long jump.
There was a long silence after this catastrophe,
and when the trembling Mrs. Gilhooley ventu-
red into the kitchen she found her dis-
gusted spouse rubbing liniment upon his
numerous bruises.

The horse jumped over the fence and is prob-
ably in Texas now; but Mr. Gilhooley has ef-
fectually cured two hens of setting.
Ventura.

Whisky and Poverty.

[Written for the RURAL PRESS by Mrs. J. M. K.]

On reading an excellent article in the RURAL
of Jan. 28th, entitled "What Civilization has
Done for Mankind," I was ready to ex-
claim, "All true! A very simple way to ac-
count for ignorant and shiftless poverty."

That portion of humanity who refused or were
incompetent to march with progress and are
simply left behind. But the subject will not
be so dismissed. There comes a whisper,
"Who, or what, made thee to differ?" The
strong should help to bear the burdens of the
weak, and this moral truth unrecognized, we
must face the problem as a national necessity.
An inquiry into the causes of want and crime,
with a view to apply remedies, now demands
the earnest attention of both statesman and
philanthropist. It is doubtful that any con-
siderable portion of the poorer classes of to-
day have come down by regular descent from
those who refused to become herders, farmers,
etc.

Kind nature seems to prevent any permanent
division lines lest we forget our common
brotherhood. We know that good and bad
qualities, greater and less abilities, like thermal
lines, cross and recross all arbitrary classification.
In the ranks of the needy poor to-day, that
class spoken of as "those who tend to idleness,
vice, and crime," there are far more than can
be accounted for by want of natural ability, or
yet from innate depravity.

We know, too, that persons are constantly
dropping down from good positions to degrada-
tion and want. In searching for cause there is
a wide latitude in theory, those who never
knew want, generally finding it wholly in
difference of character and habits. While
those who never knew aught else, find it in un-
just laws, or simply account for it by good and
bad luck. No doubt there are laws that en-
able one who has amassed considerable means
to use it to gain an unfair advantage—the
giving of public lands to great corporations
and other outrages. But with all these have
those contended who have earned comfort and
plenty.

The honest poor and their would-be helpers
should first look for cause and cure near
home, as work in that line can be begun
at once. Of poverty in cities I know
nothing by personal observation, but infer the
same causes work there as among our tramps
(generally improvident workmen) and transient
farm help. Living near a railroad town, feed-
ing scores of tramps yearly, as well as employ-
ing a number of workmen, I have made their
habits and character a study, and am free to
say, I believe there is no good excuse for beg-
ging from door to door; also that every work-
man should in time be able, as many have, to
rent or buy land for himself. The direct and
principal cause of their destitution I find in the
saloon and the vices and pernicious sentiments
fostered by that element, such as "It is mean
to save," "The world owes me a living," "All
in luck," etc. I have made no new discovery,
only verified the words of an ancient writer,
"The drunkard and the sluggard shall come to
poverty."

Whisky and poverty. Barefooted children in
all our large cities, with their miles and miles
of saloons. Children crying for bread, when the
drink bill of the nation, \$900,000,000, is far
greater than all the bread and meat consumed
by us. And this enormous amount paid by
only a portion, possibly not more than one-half
our citizens, while the other half builds orphan
asylums and organizes charities to mitigate the
miseries of the traffic. That there is no whole-
sale death by starvation proves our abundance
and generosity. Having found extreme want
to be caused principally by bad habits, let us
plead the culprits' claims to mercy.

We, who through no grace of ours were born
to learn lessons of thrift and sobriety since in-
fancy, who help each other to stand and ad-
vance, can hardly estimate the advantage we
have over those born to ignorant and evil influ-
ences. Thousands are yearly swelling the ranks
of those ignorant in hand or brain of any useful
employment. How can we give high wages for
poor service?

Shall we turn our faces away saying, "Let
the wicked mend their ways?" This will not
help one whit. Nor will the conservative man
who sneers "fanatic" when the temperance
cause is urged be likely to offer any substantial
help; only stand in the way of those who ear-
nestly strive to lift some of the world's burdens.

I had proposed speaking of remedies, but
must defer until some future time. I cannot
in a single column strengthen my position by
numerous illustrations, analogies and statistics,
as I could in a volume, but believe I have sug-
gested a truer cause for "the persistence of
poverty amid advancing wealth" than has
Henry George, a cause he seems to have pur-
posely avoided.

Yes, Mr. George, since I have thought it all
over, though at first I felt a qualm of remorse

for a partnership in a certain barren hillside, I have concluded as we worked and saved the best years of our lives to earn it, we have a moral as well as legal right to it, and don't propose to divide it with those who say by their actions "whisky instead of land."

Tracy, Cal.

An Indian "Cry."

[Written for the RURAL PRESS by MAUDE S. PEASLEE.]

I had been teaching in Pleasant Valley, Nevada Co., for several months when the lady with whom I was boarding told me that the Indians were soon coming for their annual "cry." The burying-ground was in a large field on the ranch, and she said that the Indians of the vicinity had come there for years to deposit the ashes of their dead, burned at the time and place of their decease. The next day, Sunday, they began to assemble at the appointed place, coming from Nevada City, Grass Valley, Colfax, and the surrounding country. Their numbers are rapidly diminishing every year, and this time there were scarcely 50 present. They soon had their poor ragged tents put up and their scanty baggage disposed of. Their "camp-fire" was a pitiful sort of caricature of the ones we have read of in accounts of powerful tribes. These "Diggers," as they were called, were no doubt descendants from the Putes.

The next evening, with a party of "pale-faces," I followed the sound of shrill sobbing to the camp. A group of the mourners stood around the grave where the ashes of departed Indians had in past years been deposited. The tears streamed down the squalid faces and they rocked themselves backward and forward while moaning, as if in agony. The head of one of them, an old squaw bereft of her husband, was covered with pitch scraped from the pine trees, to remain there until time wore it and her grief away. Crouched by their campfires were others less afflicted, who watched the whites with scowling faces. In large, very closely woven baskets was their soup, made of acorns. It much resembled thick bean soup. Some of the party tasted it and pronounced it quite palatable. It is cooked by dropping heated stones into the basket, and is called "three-fingered soup," because conveyed from the basket to the mouth of the Indian by the curved first three fingers of his dirty hand. There were a number of them eating, and they used the fingers as easily and satisfactorily as John Chinaman does his chopsticks. There were a number of children of both sexes, though none under three years of age. Several depraved-looking white men hung around the place, who, we were told, had taken squaws for wives and depended upon them solely for support. I noticed one very pretty Indian girl of about 16 years of age. She was very dark and quite shy.

A large pile of wearing apparel, bearskins and nicely woven baskets were erected near by to be burned at daybreak for the use of the departed ones in the "Happy Hunting-Grounds." The next morning the cries became almost deafening, and subsided only as the flames died out.

By the next evening the Indians were all gone, leaving, as they fondly imagined, the dead well provided for. The following morning we went to the place to secure relics, if possible, but the Indians had taken away all their belongings, and all we found was some beads from the funeral-pile. Any one would pass the one open grave, only two or three feet deep, a dozen times a day without giving thought to the pile of ashes in the shallow hole. The winds blew much of the deposit away, but I suppose it was much deeper once.

Grass Valley, Nevada Co.

A Voice from the Mountain-Top.

EDITORS PRESS:—The recent cold snap (I cannot call it a "blizzard" as your Butte-county correspondent does) gave us old Californians quite an icy grip, making it hard on the poor stock (and woodpile, too). I fear our Eastern visitors are bringing their snow and winds with them! We had 18 inches of snow, and the thermometer went as low as 15° one or two nights—not very cold for a Minnesota climate, but too cold for a perfect California winterless land, where roses and heliotrope are said to blossom the year round, etc. Now, I believe in telling the truth about our climate, and then our visitors from other States will not be disappointed nor blame us for untruthful statements about our "cloudless skies" and "balmy winters," etc. Certain it is that our climate, taken as a whole, is a chilly one. While the warm months are few, they are interspersed by cool, windy spells which make fires comfortable, even in summer. I speak whereof I know, having lived in Sacramento, Vallejo, San Francisco, Santa Cruz, San Jose and here, at an elevation of 2700 feet, back of Saratoga and Los Gatos. While it is true that roses and most of the garden shrubs thrive the year round in California, yet the fact remains that it is more comfortable and healthful for the inhabitants to have fires night and morning to sit by, even if the windows are open. And my experience, after a residence of 35 years, of trial proves that a greenhouse is a useful and useful addition to every garden, where the choice varieties or duplicates of plants may be safe, in

case of a cold snap like the one of the past winter.

To be comfortably and healthfully clothed, one needs as warm flannels as at the East, though not such an abundance of outdoor wraps, perhaps, when in the open air. Our climate is also a variable one, changing from mid-day to night and morning several degrees in temperature; then, while the sun is warm, the wind is cool, and all these changes must be guarded against, and prepared for, as a heavy cold is the consequence.

While every part of the State has its attractions and disadvantages, I know of none so little understood as this Santa Cruz mountain range, with its wonderful possibilities of fruit-growing, grand views and healthful climate. All lacking to its settling-up are good roads; and when they are built, the prices of land will double in value. Here is an opportunity for enterprising settlers to reap the benefit of getting good homes cheap and reaping the reward of their courage and toil.

MRS. L. D. JEWELL HERRING.

Los Gatos.

YOUNG FOLKS' COLUMN.

The Nursery at Night.

The day is done, and in their cosy nest
The rosy darlings lie in perfect rest,
Their shining tresses softly straying o'er
Those dimpled cheeks that we may kiss once more
Before we go; but let the kiss be light.
Good night, sweet slumberers!
Good night! Good night!

Anon we see a smile all gently play
O'er a sweet face, then slowly die away—
The little brain with fairy fancies teems,
And Flossie wanders in the land of dreams,
There she will wander till night's shadows flee.
Good night, my little one,
God guardeth thee!

She sees serenest sunlight, fairer flowers
And bluer skies than grace this world of ours,
As down the silent slopes of shadowland
Again she guides her hoop with eager hand,
Or may a mythic butterfly pursue.
Good night, my pretty one!
Till morn, adieu. —F. B. Dovelton.

Notes from "Jasper Hights."

[Written for the RURAL PRESS by LILLIAN HOLLY.]

On the evening of the 21st of September the sky was overcast with clouds and there were flashes of lightning and heavy thunder, and in the middle of the night we were awakened by a pouring rain. It rained so hard that we could hardly hear each other's voices; it slackened for a few moments and there was perfect silence, and then came a torrent of hail that seemed to be hurled from the sky upon our cabin-roof. We had to put our hands to our ears to lessen the noise, for it seemed as if it would deafen us. An old resident said that he had never witnessed such a storm before, and that he thought it must have been a cloud-burst, though others thought not. From the time mentioned to Dec. 28th, we had only slight showers, so that the farmers began to fear another dry season, but a heavy rain falling at that time, their fears were quieted. From Dec. 28th to Jan. 4th, it rained copiously so that the hills were soaked, and the Cholame creek in the Cholame valley overflowed its banks. But on the morning of Jan. 4th the wind, which had been in the south, changed to the north and the weather grew cold, and when we arose the next morning we looked from the window upon a white world. In fact, as Whittier says in "Snow-Bound,"

"We looked upon a world unknown,
On nothing we could call our own."

The snow remained upon the north side of the hills for a week. Two miles east of our place they had very little snow, while six miles west the snow fell to the depth of six inches. On the 21st of January it began raining again, and on the 22d we had the hardest rain of the season.

The next day after the rain in September, I went out for a walk and I saw a tarantula fastened to one of the bars on the bar-wire fence, and afterward went around and found four tarantulas and two grasshoppers. They were fastened there by the butcher-birds. Our chickens catch the tarantulas and eat them, considering them great delicacies. The butcher-birds are very tame. One little bird was so tame that he would fly into our barn every morning when papa fed his horses, and putting his head on one side would chirp at him; but alas! one day as he sat on the window-sill looking in at us with his head perched on one side in the cutest way imaginable, our naughty cat made one spring and caught it, and that was the last of our pretty bird. Why should cats be so cruel? From your little friend,

LILLIAN.

P. S. Where can any one get Guinea fowls and eggs?

LILLIAN.

Cholame, San Luis Obispo Co.

How One Scholar Understood a Lecture.

—A pupil in a public school at San Jose, the *Herald* says, lately wrote the following composition on the subject of a physiological lecture to which the school had just listened: "The human body is made up of the head, the thorax and the abdomen. The head contains the brains, when there is any. The thorax con-

tains the heart and the lungs. The abdomen contains the bowels, of which there are five: A, E, I, O and U, and sometimes W and Y."

Joe's Studies in Natural History.

[Written for the RURAL PRESS.]

The chipmunk is about as big as a small house-rat. It has red and black stripes on its back and is white underneath. It lives in trees and under rocks. It carries nuts to its nest and keeps them for winter. The chipmunk is much prettier than a rat is.

Once my dog made a wood-rat go up a tree and I climbed up the tree and caught him; the rat turned around and bit my coat, and he would not let go, and I took him home and then I killed him. The wood-rat is about as large as two chipmunks. Its nest is made of sticks and pieces of bark, piled about three or four feet high in the brush. They make a rattling noise with their tails when they are frightened.

JOE P. HERRING,

(11 years old.)

His Orders.

"I've got orders, positive orders, not to go there—orders I dare not disobey," said a youth who was being tempted to a smoking and gambling saloon.

"What special orders have you got? Show us your orders."

John took a neat wallet from his pocket and pulled out a neatly-folded paper. "It's here," said he, unfolding the paper and showing it to the boys. They looked and read aloud:

"Enter not into the path of the wicked, and go not in the way of evil men. Avoid it; pass not by it; turn from it, and pass away." Proverbs 4: 14-15.

"Now," said John, "you see my orders forbid me going with you. They are God's orders, and, by His help, I mean to obey them." —*Exch.*

Good Health.

HEALTH HINTS.—A man had a finger nail torn off, causing very great pain; brown sugar was thrown on a pan of burning coals, and the finger held over the smoke for 20 minutes. The pain was removed, and in due time a cure was effected. In *Health at Home* it is narrated that a horse seemed to be dying of a festering wound. Some old shoes were cut up in a hog-trough and set on fire under the horse, so that the smoke would reach the wound. In a few hours the swelling began to subside, the wound discharged, and the horse got well. An old lady was knitting a stocking. A member of the family came in with a painful wound. She unraveled the stocking, put the yarn on a shovel of burning coals, caused the smoke to ascend against the wound, giving immediate relief. The first thought of ordinary readers is that of wondering that such a "simple" thing should have such beneficial effects. Instead of burdening the mind with the remembrance of old leather, and brown sugar, and yarn stocking, it is better to ascertain the general principles; for one may have the most agonizing sore, and be a thousand miles from an old shoe, or spoonful of brown sugar, or a yarn from a stocking. What then? In all cases there was smoke; out of smoke creosote is made, and carbolic acid is of the same essential nature, hence the application of these useful substances to all varieties of wounds, burns, and sores. Their essential nature is two-fold—they arrest decay and purify. —*Hall's Journal of Health.*

THE OBJECT OF COOKING THE FOOD is to dissolve the adhesive substance which holds the fibers of food together, so that the digestive fluids can the more readily act upon every part of the food. "The starch granules of corn, wheat, rye, and other grains, with those of the potato, turnip, and other vegetables, are very difficult of digestion in a raw state. The digestive fluids act upon them slowly and only with great difficulty, owing to their insolubility. When subjected to heat, these granules swell very greatly in size, and rupture, when they become easily soluble. This effect of heat is familiarly illustrated in the parching of corn, the effect upon the whole kernel being due to a similar effect upon each individual granule. The indigestibility of raw fruits is due to unruptured starch granules which they contain; hence they are improved by cooking." —*Pacific Journal of Health.*

THE INDIAN AND PHYSICAL PAIN.—The general idea that the Indian endures pain stoically is not sustained by the observations of Dr. Corbusier among the Apaches. He says that "they do not endure physical pain any better, if as well, as the whites. Great or continuous pain renders them stupid, and oftentimes delirious, and the stolidity with which Indians in general are credited is not well maintained by them under small surgical operations, the one of tooth-extracting almost always eliciting a groan or a yell."

DO YOU SMOKE?—Hundreds of boys, says the *Scientific American*, apply for enlistment in the United States Navy, but are rejected because they cannot pass the physical examination. The first question is, "Do you smoke?" The invariable response is, "No, sir," but the tell-tale discoloration of the fingers at once tells the truth.

DOMESTIC ECONOMY.

CEMENT TO MEND IRON POTS AND PANS.—Take two parts of sulphur and one part, by weight, of fine black lead; put the sulphur in an old iron pan, holding it over the fire until it begins to melt, then add the lead; stir well until all is mixed and melted; then pour out on an old iron plate or smooth stone. When cool, break into small pieces. A sufficient quantity of this compound being placed upon the crack of the iron pot to be mended, can be soldered by a hot iron in the same way a tinsmith solders his sheets. If there is a small hole in the pot, drive a copper rivet in it and then solder over it with this cement.

WOODFORD PUDDING.—Three eggs, one teacup sugar, one-half teacup butter, one-half teacup flour, one teacup jam or preserves, scant teaspoon soda dissolved in three teaspoons sour milk, mix well and bake slowly. Sauce—One egg, one large cup sugar, one small cup butter, mix well, put on stove and stir until melted, add tablespoon wine, brandy or whisky, and pour on immediately.

BAKED OMELET.—Take six eggs, three even spoonfuls flour, a little salt, and beat them well together—the more it is beaten the lighter it will be—then add one pint of hot milk and keep on beating. Have a hot dish with some melted butter the size of an egg, and put into oven. Bake 20 minutes, and eat when it comes from oven, for it will fall soon. This is very nice for breakfast.

CHOCOLATE CUSTARDS.—One-fourth of a cake of chocolate, one pint of boiling water, six eggs, one quart of milk, one-half cup of white sugar, two teaspoons of vanilla. Dissolve the chocolate in a very little milk, stir into the boiling water and boil three minutes. When nearly cold add the beaten eggs, stir into the milk, flavor and pour in cups; set in boiling water and bake.

CREAM CAKE.—One cup of butter, two cups of sugar, whites of two eggs, three and a half cups of flour, one cup of sweet milk, one teaspoonful of soda, one teaspoonful of cream of tartar. For the cream: One pint of sweet milk, sweetened to taste, yolks of three eggs, thicken with flour to the consistency of custard, flavor with lemon. This amount makes two good sized cakes.

FRUIT CAKE.—Two cups of molasses, two cups of brown sugar, two cups of butter, one cup of milk, five cups of flour, five eggs, one pound of raisins, one pound of currants, one-half pound of citron, one teaspoonful of ginger, and one teaspoonful of nutmeg, one and a half teaspoonfuls of allspice and one and a half of cloves.

SAGO PUDDING.—Boil five tablespoonfuls of sago, well-picked and washed, in one quart of milk till quite soft, with a stick of cinnamon; stir in one teacup of butter and two of white sugar; when cold, add six eggs well beaten and nutmeg to taste. Mix all well together and bake in a butter-dish three-quarters of an hour.

WHITE SPONGE CAKE.—One and two-thirds cups granulated sugar, whites of eight eggs beaten to a stiff froth, one good cup flour, one teaspoon cream tartar mixed thoroughly in flour, mix together and bake in basin lined with well-buttered paper three-fourths of an hour. Season with extract lemon when done.

EGGLESS CAKE.—One and one-half teacups of sugar, one teacup of sour milk, three teacups of flour, one and one-half teacups of butter, one teaspoonful of soda, one-half teaspoonful of cinnamon, one-half teaspoonful of nutmeg, one teacup of raisins chopped and floured.

BOILED ICING.—Three cups of white granulated sugar, one cup of water, boil to a clear syrup, beat the whites of four eggs to a stiff froth, pour into the hot syrup, stir frequently while cooling. The cake should be cold before icing.

SUGAR COOKIES.—Two eggs, a little more than one-half cup of butter, one cup of sugar, one-half teaspoonful of soda (scant) in four tablespoonfuls of water.

EGG ROLLS.—Two cups of sweet milk, two eggs, one-fourth teaspoonful of salt, 3½ cups of sifted flour, one teaspoonful of baking powder; bake in gem pans.

POTATO ROLLS.—Add to 12 mashed potatoes salt, butter and a cup of milk and two eggs; make into rolls, cover with flour, and fry brown in butter.

RICE CAKES.—To one and one-half cups boiled rice add three eggs and flour and milk enough to make a batter, adding a little salt. Fry a light brown.

THE WHITE RIVER DISTRICT, east of Delano, is developing with wonderful rapidity. A year ago it was used for little but a pasture-ground for sheep and cattle. To-day nearly the whole is under cultivation or about to become so. An immense area will be seeded with wheat this year for the first time. The rainfall up to the present has been ample, and an occasional shower will insure a good crop. Land that was held at not more than \$5 or \$10 an acre a year or two ago is now in demand at \$25 and \$30. A number of small orchards are being set out, and James Slayton is planting about 30 acres to choice fruit trees. Several persons have planted a few fig, olive and orange trees, and we hear of one gentleman near Delano who has secured several thousand olive cuttings.

The Week.

The fine days are seeing trees planted by the tens of thousands. We have alluded from week to week to the unexampled demand for nursery stock, especially of certain sorts, which were long ago exhausted. Of late, planters have largely agreed to substitutions and seem determined to plant something anyway. We are not sure but the fact of limited supplies of the favorite kinds may in the end be of benefit in leading to a greater diversity in planting. Choice of fruit varieties is proceeding more upon prophetic views of market values than upon the actual adaptations of soil and situation. Such is always likely to be the case when a planting boom is on, and a planting boom has the ill-features which pertain to other booms. Still the trees are being set, nurseries are being stripped of yearlings and dormant buds, and the orchard area of the State is being increased at a rate which passes addition. The disposition to plant is a good one, and for the most part the planting will be profitable if suitable after-care be given. For a few days the northers have been

sweeping across the State, crusting some soil and drying the roots of trees in planting. No harm will result, however, if rain follows, as it is likely to, and the drying of the soil may help some dilatory cultivators. It is too early for serious injury from the dry wind.

The Republic Perpetual.

Owing to the necessities of the case, we are closing our forms on the National Holiday instead of participating in the formal observance of the day. This may perhaps be atoned for by directing our pen to a patriotic theme, and what can be better and indeed of greater practical value just at this time than to consider the element of perpetuity in our national institutions?

Look where we may, and we look in vain for a constellation of men such as our Revolutionary fathers. Never before or since have such councils or conferences met as those who signed the Declaration of Independence and formed the Constitution of the United States. They stand unequalled for wisdom, justice and pure humanity. Not a man but was a star of the first magnitude. Not one that subsequently trailed his honor in the dust. They were all angels of light and they built well and for all time. They discovered that man, in one age, was little qualified to make laws for another, so they cunningly contrived that the Constitution should be amendable forever as the people improved in wisdom.

No nation had ever done so before. The tendency of tyranny is to dictation. "Hereditary ever" is stamped upon all its work. No change without revolution. Stand still or fight is the challenge of every other government on earth. The laws of the Medes and Persians are the laws of the world.

When we see the foundations of a new building, we can well discern if it be for a temporary structure, or one for the ages. So in government it is not what men say that will endure, but what they do. The Medes and Persians said, "Unchangeable forever!" and they have passed away. Our fathers wrote, "Amendable forever," and it shall run while time shall last and man remain to know it.

But men talk even now that the Republic is a failure, and the end is near! They may banish their fears. The Republic has come to stay, and it has that within that means eternal life.

And this is it. "Amendable forever!" There is nothing that majorities cannot move. There is nothing guaranteed but this right of the majority to have its own way. The majority need not rebel. Why should it? It can do better in peace. And the minority dare not rebel, cannot do so with any hope of success. One disastrous failure has illustrated that fact. We may as well sit down and wait for majorities. It will always be the safest and the best.

Mankind are naturally conservative. Those who are doing reasonably well as things are, do not seek change. They fear confusion and insecurity. As our fathers said, they do not take up arms, even against an evil rule till it becomes intolerable and no longer to be borne with honor.

This explains why nearly all mankind to-day suffer the rule of arrogant minorities against their better judgment. They are doing reasonably well as it is, and will remain so till some disturbing element brings confusion, and then they will strike for a better system. They will not make the confusion, but being in it, will aim to come out better than before.

In the United States we are just now nursing two dangerous classes—the great rich and the disaffected poor.

No man who has a just discernment and a strong sense of virtue and patriotism can fail to confess that our corporations and combined capitalists are not conducing to the honor, the integrity, the peace, happiness and character of the Republic. The friends of true Republican freedom at home and abroad are justly alarmed at the evil influence of their counsels at Washington. It is neither in harmony with a sound religion, a laudable morality, nor a grateful patriotism. We all feel that a check has to be applied somewhere, unless a more moderate course be adopted among themselves.

On the other side, we are importing crime, ignorance and disaffection. We are doing it faster than we can educate and assimilate. The antagonism between overbearing capital and ag-

gravated, unemployed and suffering labor is becoming more and more intense. It threatens conflict. It imperils the peace and happiness of all. It is, and must be, a matter of deep concern to every true patriot. We must have peace at any cost. But we should rather court it by wise measures than provide bayonets to command it.

Unhappily we are not able to say that either of these dangerous classes is wholly right or wholly wrong. The capitalist combines for nefarious purposes, corners, trusts, advantages unknown to the moral code. Labor does the same, not to reason and arbitrate alone, but to coerce, to boycott, and destroy. It is all wrong. It can lead to nothing but evil. We should, and we shall, when we see our way to do so, restrain both, till we can apply remedial legislation.

But these two classes, the great speculators who turn over millions with the stroke of a pen, and all the disaffected, unemployed, who are ready for strategy and spoils, are only the extreme wings of the great American people.

Out of 12,000,000 voters, the rich wing cannot count on five per cent when a question of their supremacy or utter defeat is fairly made. Let them once strike at any vital part of the Republic, and the popular vote will bury them out of sight.

The other wing will never wield a tenth of the popular suffrage. There are not a million of men in the United States who are in any such desperate strait as to strike one blow against the Constitution of our fathers. It stands there, commanding the respect of all, and "amendable" at their pleasure. Why sweep it away? What shall take its place? There is nothing! No man can propose anything worthy to succeed it.

And there, between these two weak wings, is the Grand Army of the American people, 50,000,000 strong. They reach all the way down from these overgrown speculators, through men of property and education, to the tradesman, the farmer, the mechanic, the industrious and well-affected laborer and to all who love Republican liberty. They have ten millions of votes against one. They can put millions of stalwart soldiers in the field, and equip them, too.

Oh, the Republic is safe in their hands! Safe now and forever!

Selling Fruit in Towns.

We are in, first, last and all the time, for any honorable effort which tends to increase the consumption of California-grown fruit and vegetables. We print elaborate articles about the distribution of California fruit at the East and enlarge upon the great benefits which would accrue from placing our fruit on the tables of the people of lesser means instead of confining it to the sideboards of the wealthy. This is a good scheme and we hope it will ere long be fully realized. But while we labor thus to distribute our fruit thousands of miles away, we should not forget that much more fruit should be eaten by those of moderate means residing in the towns and cities of California. It is a fact that at present, in many towns fruit grown just outside the corporate limits is doled out in little lots at retail at nearly as high prices as the Eastern retailers charge for it. This is owing largely to a host of petty ordinances which prohibit peddling within town limits except on payment of ridiculously heavy licenses. The money for these licenses is ostensibly needed to meet town expenses, but the fact of the matter is that the rates are so high that very few can pay them, and as a result the sale of fruit is confined to a few fruit stores, where, as a rule, exorbitant prices are charged. It follows from this that the poorer classes in towns, people with large families, cannot afford to buy fruit, and the poor children famishing for it are forced to steal it or rescue decaying specimens from garbage barrels, etc. It is a most lamentable state of affairs, and we are glad indeed to see that a decision by the Hon. F. E. Spencer, Superior Judge of Santa Clara county, is likely to accomplish much in righting the wrong. A man was arrested and imprisoned by a San Jose justice of the peace for peddling fruit in the city without a license, in transgression of an ordinance which provided that such a peddler in San Jose should take out a license, for which he had to pay \$50 per month. The peddler appealed to the Superior

Court and came before Judge Spencer on habeas corpus. The peddler's attorney, N. H. Castle, made an excellent showing for him, contending, according to the report in the *Mercury*, as follows:

He took the position first that the license demanded (\$50 per month) was not in accordance with the intention of the statutes concerning the licensing of hawkers and vendors. He said it had been placed so high that it was, to a great extent, prohibitory. The statutes of the State of California were framed to protect the people from the insidious encroachments of monopoly, and it could be seen at once that the ordinance under which the defendant had been convicted did, in a measure, favor extensive dealers, inasmuch as it barred the competition of small dealers.

He called attention to the fact that, while the municipal ordinances placed the license on fruit-vending as high as \$50 per month, they only imposed a tax of \$20 per year on the vegetable vendors. This was unjust and discriminating. The vending of fruits, he said, is an honorable business, as much so as the vending of vegetables, poultry, butter, eggs, etc. In many instances the vendor's stock in trade would not be of as much value as \$50.

He recited a great many cases touching the point being considered. He referred to Dillon's and to Cooley's constitutional limitation and to several decisions of the Supreme Court of different States, California among the rest. It had been decided by the able authorities to which he referred that whenever a tax or license was levied that tended to discriminate between branches of the same legitimate business, it became null and void.

He referred to that section of the Constitution of the State of California which granted to cities the power to impose licenses for the purpose of regulating a pernicious traffic, or for raising revenues sufficient to discharge the obligations incurred by the city.

He contended that the case of his client came under the latter head—the raising of revenues—consequently no license could be exacted that was beyond a reasonable limit, hence the ordinance was in excess of the power granted by the Constitution and therefore void.

Such in outline was the claim of the peddler's attorney. Judge Spencer, after considering the question, delivered the following opinion:

The ordinance, under which the conviction in this case was had, provides, among other things, for the following schedule of licenses imposed upon hawkers and peddlers. Those engaged in peddling wearing apparel, groceries and other articles shall pay a license of \$50 per month. Those engaged in peddling fruits shall pay \$50 per month, and those engaged in peddling vegetables, meats, poultry, eggs and butter shall pay a license of \$20 per year.

I am disposed to look at the business from which the revenue is to be derived, whether it be an obnoxious or legitimate business. The carrying on of the retail liquor business, for instance, would probably uphold a heavy tax.

This business is small and the profits, as shown by the learned counsel, would in many instances barely exceed the license imposed. The imposition of such a tax is onerous, in fact tending to be prohibitory. It is an unreasonable and unjust imposition. There is no reason why the vendor of vegetables should be taxed \$2 per month and the vendor of fruit 25 times that amount for the same period, when it is evident that the same imposed upon the various vocations and arbitrary and grossly discriminating. I think, therefore, that the ordinance should not be upheld, and that the conviction is illegal.

It is the judgment of this Court that that portion of Section 7 which relates to the peddling of fruits and vegetables, requiring in the first instance a fee of \$50 per month, is void, as unreasonable and unjustly discriminating. It is ordered that the prisoner be discharged.

We have given this matter at considerable length, because it seems to us of much importance. It involves the whole question of restrictions upon the free sale in towns of the fresh produce of the surrounding country. The health of the townspeople, the growth of a generation of strong and healthy youth, depend much upon the free sale at low rates of the freshest food supplies, and to restrict such sale under pretense of town revenue or protection to established green grocers is short-sighted, and as has been shown by Judge Spencer, illegal. In many towns there should be 20 wagon-loads sold where one is sold now. Fruit should be set down on the doorsteps of the poor by the box, where now seldom a paper-bag full rests. The orchards are full of fruit that is much too ripe for long shipment, which is just in shape for consumption in large quantities in the neighboring towns. Let it be freely distributed and eaten, and let all petty ordinances be swept away.

This is a matter to which the fruit-grower should give attention as well as to the greater distribution at distant points. We hope the decision by Judge Spencer may be made of wide value.

The Sugar Trust.

We have already expressed our opinion in a general way of the great monopolistic tendency of the day, which is resulting in the organization of the so-called "trusts." We are glad to see that popular attention is being loudly called to the imminent danger of oppression and extortion through such organizations by the action of the Senate of New York State, in appointing a special committee to examine into their methods and influences. It is becoming more and more apparent that a strong and wide-reaching effort against monopolies must be a leading issue in our politics, and this effort will be hastened by the uprising of the trusts. People have become too much accustomed to oppression through the great monopolies of transportation and communication, the railroad and the telegraph.

Though there has been a growing popular effort against these gigantic monopolies, and something has been accomplished by national legislation, like the Interstate Commerce Act, there has still remained a great amount of popular inertia which was willing to acknowledge the sovereignty of the railroads and telegraphs and bow before it, or else accept it as inevitable. Something like the same disposition was meted out to the great oppressions of the Standard Oil Company. But the recent general movement of capitalists in the organization of "trusts" has excited the people more than has the grasp of a few giant monopolies which has been gradually tightening around them during the last quarter of a century. This alarm is natural, and we trust the result will show that organized capital has overreached itself and thus secured its own remedy by the awakening of the people to existing and impending evils.

These considerations are suggested by the telegraphed statements concerning the inquiry now being prosecuted by the special committee of the New York Senate, and some of these are as follows:

Opening with the sugar trust, Henry Havemeyer testified that when the trust was formed each stockholder surrendered the stock held in each company, and was given the stock of certificates in the combined companies in return. There was no written agreement as to what should be done by the Board of Management of the organization after the surrender of the stock. The board has a right to place its officers in any of the refineries. The arrangement was made about the 1st of last December, the most active men in its consummation being J. E. Parsons and John R. Dospassos. The witness acknowledged that one refinery in St. Louis, two in Louisiana, one in Boston, two in Philadelphia and two in San Francisco had been forced into the pool, which now controls 32,000 barrels a day capacity. The production of sugar since December 1, 1887, has decreased about a fourth and the price has gone up. The North River Company has gone out of business entirely, but the board has taken its stock. The amount of stock of the combined companies for which certificates have been issued was \$45,000,000. The board has decided to close more refineries, those in Boston being among the number. They will all get their share of profits, as if running.

This gives some idea of the magnitude of the operation as well as an inkling of the policies adopted. The leading points are the aggregation of \$45,000,000 arrayed against the legitimate forces of production, trade and consumption. There is also the fact that certain producing capital is to be paid for idleness and the wages and considerably more are to be extorted from consumers, while the laborers are to have their bread snatched from their mouths that capital may become opulent through this idleness. Still beyond is the fact that consumers are to be robbed, and this means not that

sugar-eaters alone are to be mulcted, but that other industries which use sugar as a raw material are to be robbed; and still beyond that those who furnish other materials which are used with the sugar in manufacture are to have their enterprises hampered, checked in their growth, and possibly even made unprofitable. To see how wide-reaching this wretched greed of the sugar-makers is, think for a moment of its effect upon the great canned

and preserved fruit industries of the country. The manufacturers' industry is checked, the army of artisans who labor on fruit, on tin, on lumber in the employ of the canners, is thrown out of work or reduced in reward, the fruit-grower is robbed of his just returns, and with him falls hardship upon the whole community in which he lives and who share the profits of his business—all this for the imme-

diat benefit of the few millionaires whose money enables them to enter a "trust" to depress manufacture and elevate market values as they see fit.

This is only a hint of what is now in progress in this country, for the sugar trust is only one of a host of oppressive monopolies recently born. Are the people to sit quietly while such enterprises are in progress? We think not; and honor is due to the Empire State that action calculated to awaken and warn the people has already been taken.

A French Draft Horse.

Although we have given many engravings of French draft horses, there is a grace and spirit about the portraiture by Lou Burk which we give on this page which entitles it to a place in our columns. Leaving aside the individuality of the animal, the portrait may be presented rather as a good representative of the breed which by generations of breeding and selection

AN ECHINOCACTUS IN BLOOM (See next Page).

has gained a fixed type, which is, of course, the secret of value in any established breed; for the fixedness of type, of course, means its transmission to progeny even when the prepotent animal is associated with the unfixed blood of common females, as well as when mated with females of his own royal blood.

The type shown in the engraving can be recognized in many horses imported to this

A TYPICAL FRENCH DRAFT HORSE.

State as well as from others which have been bred from them on our soil. This type is also representative of the band of French horses lately brought here by the veteran importer, James A. Perry, and which are mentioned in our advertising columns as to be sold at auction in this city on Wednesday, March 7th.

This sale it should be noted is a joint offering of French horses and Angus cattle, and therefore should draw out a good attendance of both horsemen and cattlemen.

Successful Sale of Live-Stock.

The series of annual sales of the produce of the Cook Stock Farm located at Danville, Contra Costa county, was inaugurated by holding the first sale at the Bay District track, in this city, on Thursday, the 16th inst. The stock sold comprised some of the most fashionable bred trotting and roadster stallions, brood mares, colts and fillies of high form, style, and action. It is claimed that no such class of stock has ever been offered at auction in this State, and the result shows that the public is conversant, and getting better qualified each year to judge of the various strains of blood that go to make up a first-class animal.

The demand for this character of horses is constantly increasing, and, as shown at this sale, buyers are willing to take them at prices that are certainly remunerative. This sale should be the means of encouraging others who are breeding this class of stock to hold similar meetings, whereby the public could have an opportunity to make selections of such animals as are wanted without being hampered with a reserve or fancy price, set in most cases at private sale by the owner's pride or length of purchaser's purse. It is evident from the experience of this sale that the competition created by actual buyers, when confident no price has been fixed upon, results in prices that should be satisfactory to the most conservative breeder.

This custom has leaped into prominence in nearly all Eastern States, as a means of sale of blooded stock of all kinds. The breeders themselves have found it more profitable, as a rule, and have secured larger returns than from private sale.

This sale, like the most important ones so far held in this State, was conducted by Messrs. Killip & Co., whose reputation for working up and managing sales of live-stock is well established on this coast. Mr. Killip's persuasive cry brought out several bids at this sale after the bidder had reached his limit. These occurrences were the occasion of much merriment. Mr. Samuel Gamble, the superintendent of the Cook Stock

Farm, was on hand and aided greatly by his statements as to breeding, dispositions, speed, etc., of the animals offered. His recital of the various pedigrees back four and five crosses was remarkable, and showed a retentive memory well adapted for the business in hand. The implicit confidence had by the public in Mr. Gamble's statements had much to do with the success of the sale. Every animal offered was sold. Appended is a complete list of

Prices and Purchasers.

Stallions—Yosemite sired by Egbert, 1136, first dam by Woodford Mambrino, M. A. Sparks of Galt, \$1025; Clovis, sired by Sultan, 2:24, first dam by Thorndale, S. N. Straube, \$2000.

Brood mares—Crary, chestnut filley, sired by Steinway, 1808, three-year record 2:25½, first dam Old Dove, said to be Eclipse stock, with foal by Clovis, J. J. Hallian, \$285; Maud H, light-bay mare, sired by The Moor, 870, first dam Katydid, by Fireman, Pleasanton Stock Farm Company, \$340; Lady Wattles, bay mare, sired by Abbotsford, 2:19½, first dam Lady Budd, H. Pierce, \$525; Phaeola, roan mare, foaled 1887, sired by Silver

Threads, son of The Moor, sire of Beautiful Bells, dam of Hinda Rosa, 2:19½, and Sable, dam of Sable Wilkes, 2:18, first dam Minnehaha, H. Pierce, \$2175; Olita, iron-gray mare, sired by Nutwood, 2:18½, first dam Maud M., F. H. Burk, \$800; Mattie, bay mare, sired by Whipple's Hambletonian, 725, S. Straube, \$500; Nettie, four-year-old record 2:26, bay mare, sired by Elms, 891, first dam Lady Winkley, 2:34, M. Salisbury, \$510; Annie Laurie, three-year-old record 2:30, bay mare, sired by Echo, 462, dam by Jack Hawkins, J. N. Ayres, \$800; Ida Davis, bay mare, sired by Belnor, first dam Danville maid, S. N. Straube, \$325; Cambridge, bay mare, sired by

Jimmy, first dam Miss Arner, Thomas A. Pearson, \$80.

Trotting colts—Castro, iron-gray colt, sired by Clovis, 4909, first dam Carrie Stoner, Thomas A. Pearson, \$105; Arthur Orton, light bay colt, sired by Steinway, 1808, first dam Maud H., F. H. Kentfield, \$175; Steiner, full brother to H. R. Covey and Charles Deby, brown colt, sired by Steinway, 1808, first dam Kitty G., B. Gonzales, \$1500; Stein, bay colt, sired by Steinway, 1808, first dam Lady Wattle, C. H. Maddox, \$170; Coptis, brown colt, sired by Clovis, 4909, first dam Annie Laurie, T. Whitely, \$250; Syrian, bay colt, sired by Yosemite, 1808, first dam Kitty, H. M. Waterbury, \$50; iron-gray colt, sired by Clovis, 4909, first dam, Maud, Thomas A. Pearson, \$65.

Trotting fillies—Collette, bay filly, sired by Steinway, 1808, first dam Annie Laurie, S. P. Jefferson, \$365; Miss May, bay filly, sired by Steinway, 1808, first dam Kitty, Rosedale Stock Farm, \$220; Mattie Consuela, brown filly, sired by Steinway, 1808, first dam Mattie, S. M. Straube, \$1675; Nettie Seale, bay filly, sired by Steinway, 1808, first dam Nettie, A. W. Wilson, \$440; Cressida, brown filly, sired by Yosemite, 4906, first dam Maud H., George Ball, \$200; Ella D., chestnut filly, sired by Yosemite, 4906, first dam Nettie, M. Salisbury, \$340; Carrie Malone, bay mare, sired by Steinway, 1808, first dam Kitty G., D. M. Murphy, \$1600; Maggie McMahon, bay filly, sired by Cresco, 4908, first dam Annie Laurie, G. W. Woodward of Yolo, \$220; Eola C., bay filly, sired by Cresco, 4908, first dam Olita, H. Pierce, \$230; Chance, bay filly, sired by Cresco, 4908, first dam Miss Arner's saddle pony, Thomas A. Pearson, \$65; Cynet, bay filly, sired by Steinway, 1808, first dam by Woodford Mambrino, Rosedale Stock Farm, \$420; Theodosia, brown filly, sired by Steinway, 1808, first dam Mattie, S. M. Straube, \$800; Edie C., brown filly, sired by Cresco, 4908, first dam Kitty, T. A. Pearson, \$160; bay filly, sired by Steinway, 1808, first dam a gray Norman mare, T. W. Whiteling, \$80; Alla Y., bay filly, sired by Yosemite, 4906, first dam Alla, T. A. Pearson, \$150; Leoline, bay filly, sired by Clovis, 4909, first dam Leah, by Woodford Mambrino, W. Page, \$195; Milly H., brown filly, sired by Clovis, 4909, first dam Mattie, by Whipple's Hambletonian, S. M. Straube, \$310; Yonniolo, iron-gray, sired by Yosemite, 4906, first dam Steinola, by Steinway, W. Page, \$420.

Trotting geldings—Belnor, full brother to Stewart, 2-23, bay gelding, sired by Strathmore, 408, first dam Carrie Clay, E. Miller, \$300; Cleon, brown gelding, sired by Steinway, 1808, first dam Nourmahal, H. A. Rosenbaum, \$265; Conclave, bay gelding, sired by Steinway, 1808, first dam Annie Laurie, F. C. Talbot, \$205; H. R. Covey, bay gelding, sired by Steinway, 1808, first dam Kitty G., by Electioneer, Reina Hughes, \$1600; George D. Chapman, bay gelding, sired by Steinway, 1808, first dam Maud H., L. J. Rose, Jr., \$210; Conference, chestnut gelding, sired by Steinway, 1808, first dam Kitty Tricks, S. M. Straube, \$375; Charley G., bay gelding, sired by Cresco, 4908, first dam Lady Slasher, Joseph Rosenthal, \$175; Commentary, chestnut gelding, sired by Steinway, 1808, first dam Alla, Charles H. Ackerson, \$270; California, bay gelding, sired by Belnor, first dam Leah, by Woodford Mambrino, T. A. Pearson, \$140; Consul, bay gelding, sired by Belnor, first dam Alla, by Almot, T. A. Pearson, \$180; Caesar, bay gelding, sired by Steinway, 1808, first dam Olita, Pleasanton Stock Farm Co., \$510; Calaveras, roan gelding, sired by Belnor, first dam Phaceola, M. Hoeftich, \$300; Critt, chestnut gelding, sired by Steinway, 1808, first dam Lady Wattle, H. Pierce, \$110; W. S. Burpee, dark bay gelding, sired by Cresco, 4908, first dam Maud H., S. M. Straube, \$200.

Cleveland bays—Bay colt, sired by Duke of Wenlock, first dam Cook carriage mare, William Irwin, \$75; black colt, sired by Duke of Wenlock, first dam Bertie, T. A. Pearson, \$90; bay stallion, sired by Duke of Wenlock, first dam Dove, Jr., W. M. Newhall, \$145; bay colt, sired by Duke of Wenlock, first dam Sallie, F. H. Burke, \$170; iron-gray gelding, sired by Duke of Wenlock, first dam Maud, T. A. Pearson, \$75; bay colt, Star, sired by Duke of Wenlock, W. M. Newhall, \$75; gray filly, sired by Duke of Wenlock, first dam Maggie, T. W. Whiteley, \$115; brown colt, sired by Baron Hilton, first dam gray Norman mare, T. A. Pearson, \$80; brown filly, sired by Royal S. udley, first dam Puss, F. Moulton, \$105; bay filly, sired by Baron Hilton, first dam Cook carriage mare, F. Sanborn, \$80; chestnut filly, sired by Baron Hilton, first dam Old Dove, J. Whiteley, \$120.

Roadster geldings—Convention, bay gelding, sired by Steinway, 1808, first dam Kitty, Dr. H. E. Carpenter, \$235; Cleveland bay, Charles Ackerson, \$120; Comet, brown gelding, sired by Steinway, 1808, first dam Puss, William Bogan, \$150; Cato, gray gelding, sired by Steinway, 1808, first dam Dove, Jr., F. Bellmer, \$85; Curley, bay gelding, sired by Steinway, 1808, first dam gray Norman mare, Dr. Leonard, \$160; Colon, brown gelding, sired by Steinway, 1808, first dam Puss, T. A. Pearson, \$120; Centropio, brown gelding, sired by Steinway, 1808, first dam Bettie, G. Grindell, \$135; Cleveland, bay gelding, sired by Steinway, 1808, first dam Dove, Dr. Leonard, \$310; Sanford, black gelding, sired by Steinway, 1808, first dam Miss Arner, Joseph Rosenthal, \$155; Jumbo, brown gelding, sired by Yosemite, 4906, first dam Lucy, Arthur Williams, \$90.

The Citrus Fair at Riverside.

[No. 2.]

The recent brilliant exposition at Riverside calls for far more notice than could be squeezed into two columns; so we resume our description at the point where we found ourselves last week obliged to write "to be continued."

Reluctantly hurrying by the citrus displays of H. E. Allatt, G. W. Garcelon, Mrs. Magee, A. S. White and other Riversiders, we find on the west north table the North Anaheim or Fullerton exhibit—large, clean Washington Navel, Mediterranean Sweet, Paper-rind St. Michael, Tangerine and seedling oranges, Sicily and Lisbon lemons and Mexican limes, by the Semi-Tropical Fruit Co. and a dozen other contributors, beside Rambo apples by F. H. Keith, English walnuts by A. Langenberger, guava jelly by Mrs. R. J. Northam, and ostrich plumes and eggs from the Southern California Ostrich Farm Co. The eggs being about the size, shape and smoothness of our very largest oranges, some one called them "Anaheim Navels."

The next table southward bore the Glendora output, one of the finest brought in "from abroad." The fruit was of deep color and excellent flavor, comprising the most popular varieties of budded oranges, besides lemons, dried peaches and superior second-crop raisins, from M. R. and J. Baldrige, C. T. Robedeau and others.

In Ontario's display, which W. E. Collins cared for, the foremost feature was a pyramid of Washington Navels, large and uniform. There were also lemons and Mediterranean Sweet oranges.

In the northwest corner T. J. Swayne of San Diego showed very fine Washington and Australian Navel, Malta Blood, Mediterranean Sweet and Seedling oranges, Bonnie Brae, Sweet Kind and Lisbon lemons, Mexican limes, dessert raisins, olive oil and pickled olives.

Ventura county had the booth farthest from the door on the north side of the hall, where she was represented by displays from the orchards of N. W. Blanchard, H. C. Crumrine and E. S. Thacker.

The second booth from the stage, devoted to the Duarte of Los Angeles county, was fragrant and fascinating with choice fruit, free from insect pests. In making this exhibit there were used six boxes of Washington Navels, three boxes of Konabs, Baldwin's Favorite, Golden Kings and Du Roi seedlings, three boxes of Mediterranean Sweet, two boxes each of Malta Bloods, Paper-rind St. Michaels, Tangerines and Mandarins, two boxes of lemons, one box of Persian limes, one box budded and a large quantity of Mexican limes. The arrangement of this display was artistic and won much credit for Messrs. Chipendale, Scott and Watson, who had it in charge.

The next booth was divided between Etiwanda and Highlands. The former showed sun-dried apricots, preserved apricots, peaches, pears and grape jelly, by W. McBain, raisins, and a few plates of oranges and lemons of excellent quality. From the latter W. R. Ingham, Gov. Waterman and others had a variety of choice budded and seedling oranges, Lisbon and Eureka lemons, raisins and the citron of commerce, both green and dried. This display, which overflowed upon the table opposite, was praised highly. The last booth on this side nearest the entrance was well occupied with the products of East San Bernardino valley, as described in our previous article.

Up in the gallery H. B. Everest, the Two-goods and other Riverside growers had fine citrus fruits for which there was not room below.

Good apples in considerable variety were shown by Robert Strong of Westminster, Jasper and Sickler of Julian, and G. H. Keen, Cajon Pass. D. T. Russell of Riverside also had some nice White Winter pears.

A remarkable collection of apples from Arkansas—61 varieties—made by Col. Babcock and exhibited by W. S. Thomas of Little Rock, furnished an interesting study for pomologists. This was part of the collection which won the Wilder medal at Boston last September.

A creditable display of citrus fruits, English walnuts and raisins came from F. Cunningham's Agua Tibia ranch in San Diego county. Specimens of Elsinore's boasted coal attracted some attention.

The Oregon Fruit Evaporating Co. exhibited a large lot of dried cherries, plums and berries, and canned corn and fruit.

To Pomona's assortment of prevailing citrus products, A. R. Meserve added Japanese persimmons, C. F. Loop English walnuts from trees half a century old, Easter Beurre pears and pickled olives, and Mrs. Taylor some fine specimens of apples.

Besides his superb lemons and oranges, already spoken of, E. W. Holmes had the only show of "Zante currants" on the floor of the hall.

J. R. Noland had an orange, 21 months from the bud, that measured 14 inches in girth.

A case of beautiful raw silk, produced at Riverside from worms fed upon the osage orange, is mentioned by one correspondent.

Among the distinguished guests who visited the fair, besides the many members of the American Horticultural Society, were Gen. and Mrs. Fremont, Joseph Pulitzer of the N. Y. World, accompanied by Mrs. Pulitzer, and Luis Torres, Governor of Sonora, Mex. Gov. Torres has arranged for a large shipment of young budded

Riverside Washington Navel orange trees to his ranch in Sonora, as soon as he can get the ground prepared to receive them.

A very pleasing incident was the presentation of a complimentary ticket to the venerable and kindly Dr. J. P. Greves by Mr. Holt, with appropriate remarks on behalf of the pioneer settlers. This ticket was a solid silver plate 2½ by 4 inches, on which was engraved the following:

Southern California Citrus Fair.
February 7, 1888.
Complimentary to Dr. J. P. Greves,
The Father of Riverside.
L. M. HOLT, Manager.

The doctor was visibly affected by this congratulatory token from those who recognize the soundness of his judgment in locating the settlement 17 years ago.

What with the magnificent and unequalled exhibit, the delightful weather, and the number and character of those who attended, the Tenth Annual Citrus Fair at Riverside was in truth a memorable occasion.

A CACTUS IN BLOOM.—We give on page 165 an engraving showing the bloom of a species of echino-cactus. These plants are strikingly beautiful and could be used to much greater advantage in open-air situations in California than they are.

SANTA YNEZ,

Santa Barbara County, California.

THE SANTA YNEZ LAND AND IMPROVEMENT COMPANY

Is now offering for sale at low prices and upon very moderate terms the choicest of

Agricultural and Horticultural Lands

Of the famous College Grant, in the aforementioned beautiful valley. The CLIMATE is perfect, SOIL rich and diversified, TOPOGRAPHY unusually varied and beautiful, a park-like growth of Oaks covering the entire valley. WATER SUPPLY more than sufficient for irrigation of all irrigable lands, and no alkali either in water or soil. TRANSPORTATION FACILITIES superior now, and two trunk lines certain to pass through the valley within a year.

43,000 ACRES OF THESE CHOICE LANDS

Are for sale at from \$25 to \$150 per acre; terms of payment being one-third cash, one-third in two, balance in three years; six per cent interest on deferred payments.

To reach the Santa Ynez valley take any transportation line to San Luis Obispo, thence by Pacific Coast Railway to Santa Ynez or to Santa Barbara, thence by stage to Santa Ynez. Persons seeking lovely homes or lands for homes or quickly paying investments, cannot do better than purchase here. For further information refer to

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES

At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. One hundred and seventy-five acres at Palermo are now being set out in the choicest varieties of Florida Orange Trees. Maps and further particulars of

SUCCESSORS TO FALKNER, BELL & CO.,
No. 406 California Street,
SAN FRANCISCO, CAL.

NO SECOND APPLICATION!

The parties who have used our New Cleanser write us that they are surprised at its staying qualities. The scale, the aphids, etc., do not like to go back again where it has been used. It makes a RESISTANT STOCK of the tree.

After two years' experience, we have to announce that there has not a single case come to our knowledge where the Woodbury Tree Cleanser has not fully and satisfactorily accomplished everything that has been promised.

By reference to a late report from Prof. Klee, we observe he states that he has found very good results from it in almost every case, and that he has encountered no occurrence of any injury from its use. We are informed that it has his recommendation as a thorough-going, successful and cheap Winter Wash; and it is certainly endorsed by the leading orchardists in the State. [Please send for their published letters.]

It has had an unexampled success in exterminating Scale on all kinds of Fruit Trees. It is sent all ready for use, and instructions, which are very simple, are furnished with every package.

Price 3½ cents per pound in cases, 80 pounds in a case; in 8-pound cans, same price, 15 cents extra for can; 3½ cents per pound (10 per cent off) in barrels; about 400 pounds in a barrel.

We also make a fine

ROSIN WASH,

Containing no Kerosene, perfectly harmless and thoroughly successful. This is the valuable remedy strongly recommended by Prof. Klee for the Cottony Cushion Scale or "Icerya." Price ½ cent per pound higher than the Woodbury Tree Cleanser. We also manufacture the fine Anti-gumming Farm Machine Oils and general Lubricating Oils. We respectfully solicit correspondence.

WOODBURY OIL COMPANY,

123 CALIFORNIA STREET,

SAN FRANCISCO, CAL.

FERTILIZERS!

Feed the Land and it Will Feed You.

Fertilizers lessen the necessity for irrigation, increase the yield, improve the quality of crops, and keep the soil in a strong, healthy condition.

Special Fertilizers for all Crops.

The Acme Harrow.

One of the most largely used implements for fine tillage in this State is the Acme Pulverizing harrow, clod-crusher and leveler. Our readers are aware that we have often referred to this implement and commended it. It has been continually improved by its enterprising manufacturer, Duane H. Nash of Millington, N. J., and the engraving on this page shows it in its present form.

The Improved "Acme" Pulverizing harrow not only has flexible gang bars practically like the old style, but the coulters are both reversible and adjustable. By reversible is meant that when the coulters are worn on the end they may be turned about end for end, thus giving double wear and making each coulters worth double an old-style coulters. By adjustable is meant that the coulters may be adjusted to the right or left so as to overlap and cut over the entire surface of the ground, or, where there is rubbish, can be made not to overlap so as to avoid almost entirely clogging in rubbish. These are important considerations and are commended to the attention of our readers. The Acme may be seen at the Bull & Grant Implement Co.'s places in S. F. and Los Angeles.

THE LAST OREGON WOOL CLIP showed an increase in quantity of about 15 per cent as compared with the previous year; the quality of the staple remains about the same; but the clip of Eastern Oregon was delivered in a dirty and unmerchantable condition. The Willamette

THE ACME HARROW.

valley wool was somewhat off color and dingy in its appearance, the demand and price being both lessened by this circumstance. There has been a slight increase in the number of merinoes in the Willamette valley, and their wool is also a shade better in quality. There has been but a slight demand for the bulk of our wool. Choice grades sell readily at fair prices, but inferior, poorly packed and dirty wool remains on hand and cannot be forced upon the markets of the country. I cannot impress too strongly upon the farmers of Oregon the importance of making every effort to improve their sheep, and to furnish wool that has been carefully sheared and properly packed, free from dirt and foreign matter of all kinds.—Cor. Oregon Ex.

THE PALERMO NURSERY AND CITRUS ASSOCIATION has filed articles of incorporation. Its objects are to buy and sell lands, water and water rights, to buy, sell, and grow trees, and to engage in the general business of fruit-growing. The capital stock is to be \$60,000, of which amount \$5700 has been subscribed as follows: Irwin C. Stump, \$1500; W. F. Bogart, \$600; E. W. Townsend, \$600; O. W. McAfee, \$1500; A. S. Baldwin, \$1500.

CITRUS JAPONICA.—A few mornings since Mr. Amore, of the Japanese Tree-Importing Company, gave us a handful of the fruit of the *Citrus Japonica*, which are a pleasing novelty in the citrus line. Dainty little oranges they are, the size and shape of a Queen olive, juicy and finely flavored. You may eat one up at a mouthful, peel and all. The trees, he informs us, grow to a height of 12 feet and bear profusely.

A BILL to provide for the establishment of an experimental grass and forage-plant farm, and for conducting experiments relating to grass and forage plants, has been introduced in Congress by Senator Platt of Connecticut.

HOLSTEIN-FRIESLIANS.—The advertisement of J. B. Fort & Sons, which appears in this issue of the RURAL, will scarcely be overlooked by those who are interested in thoroughbred cattle.

THE President and Mrs. Cleveland, with Secretary and Mrs. Whitney, Col. and Mrs. Lamont, have gone down to Jacksonville, Florida, to visit the Sub-Tropical Exposition.

THE PACIFIC RURAL PRESS is the leading agricultural weekly of the Pacific Coast. It is the acknowledged authority on all farm topics.—*Marysville Budget.*

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Everything for the Garden

Is the comprehensive title of Peter Henderson & Co.'s Catalogue advertised in our columns. It is a handsome book of 140 pages, illustrated by three colored plates, containing hundreds of illustrations of flowers, fruits and vegetables, improved implements, etc. The "instructions for culture" are written by Peter Henderson, the well-known authority on everything pertaining to garden work. This book, "Everything for the Garden," is mailed on receipt of 25 cents, which is about half its cost, on the understanding, however, that parties ordering will say in what paper it was seen advertised.

Gabilan Rancho.

Containing 7665 acres, situated near Salinas City, Monterey County, is offered for sale. For particulars address J. C. HOAG, 312 Van Ness avenue, San Francisco, or TYLER BEACH, San Jose, Cal.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

Buena Vista Rancho.

Sixth Ave., and 20th St., New York.

"DISEASES OF THE DOG" is the title of a new volume of nearly 300 pages by John Henry Steele of Bombay, the distinguished professor of veterinary science. The work has been carefully prepared to meet the want of a modern systematic text-book of canine practice, is copiously illustrated, elaborately indexed and handsomely printed by Jno. Wiley & Sons of New York. The price is \$3.50. For sale by Payot, Upham & Co., S. F.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, Household, Storehouse, Domestic Animals, etc., with Remedies for their Extermination,

By MATTHEW COOKE,

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

GORGEOUS in its coat of many colors—blue, green and orange, crimson and gold—comes the catalogue of J. O. Vaughan's great Chicago seed store; and its 80 quarto pages are not only illustrated by countless admirable engravings, but also embellished with several full-page chromo lithographs of choice melons, floral novelties and climbing plants.

"TESTED SEEDS."—Hiram Sibley & Co. of Rochester, N. Y., and Chicago, have sent us their illustrated annual for 1888. It includes vegetable and flower seeds, greenhouse plants, roses, small fruits and implements.

A RAILROAD from St. Paul, Minnesota, to Pekin, China, bridging Behring's Strait, is talked of seriously.

Dewey & Co.'s Scientific Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KOEBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

DR. J. KOEBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

H. M. NEWHALL & CO., Agents, 309

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1/2 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or

and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equaled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

S. H. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 22, 1888.

The weather the past week was variable, with a higher temperature and in some of the districts accompanied by high warm winds. In farm products trading the past week was fairly active. Eastern and European advices the past week have been reporting from day to day, strong wheat markets, with higher bids at the close. As we go to press upon the 22d, a legal holiday, the latest cablegrams available are as follows:

LIVERPOOL, Feb. 21.—Spot wheat, steady. Nos. 1 and 2 wheat, Standard California, including Club wheat, highest price 5½¢, 5¼¢@6½¢; Red American spring, 6s 8d. Later—3:30 P. M.—Demand improving.

California Products in Chicago.

CHICAGO, Feb. 18.—Receipts of fruit from California increased somewhat the latter part of this week. Desirable fruit is wanted, while ordinary grades have slow sale. California Riverside oranges, \$3@3.75; other kinds, \$3@3.25; Navel, \$3.50@6.25.

California dried fruits continue steady. There is a moderate demand and in a small way there is a fair trade. Nectarines are dull, and they are the only description which is not readily placed. We quote: Peaches, sun-dried, in sacks, ½ lb, 10¢@12¢; do, evaporated, unpeeled, in sacks, ½ lb, 12¢@14¢; do, boxes, ½ lb, 13¢@15¢; do, peeled, in sacks, ½ lb, 17¢@22¢; do, in boxes, ½ lb, 22¢@25¢; apricots, sun-dried, in sacks, ½ lb, 10¢@11¢; do, evaporated, in sacks, ½ lb, 12¢@15¢; plums, pitted, in sacks, ½ lb, 12¢@13½¢; prunes, small, ½ lb, 8¢@10¢; do, fancy large, ½ lb, 13¢@14¢; nectarines, according to quality, in sacks, ½ lb, 5¢@12½¢; raisins, loose Muscates, two-crown, ½ box, \$1.50@1.60; do, three-crown, ½ box, \$1.75@1.80; do, London layers, ½ box, \$2.25@2.40.

Beans are quotably very firm. The offerings remain small and the consignment lots consist mainly of small parcels. There is a moderate demand, but owing to high prices the inquiry is restricted to providing for consumptive requirements. Fine navy beans, in particular, are scarce. Quotations for California, according to quality, \$2.60@2.90.

California strained honey, 7¢@8¢.

Hops are quiet and the demand is still light. Sales are only made in a small way. There were no new features or conditions in the market. Choice grades are scarce and steadily held, while common qualities are plenty and weak. Pacific Coast, choice, 12¢@14¢ ½ lb, common to prime, 10¢@12¢.

Wool.

NEW YORK, Feb. 20.—The demand is fair in the wool trade in the fine grades, with prices well supported. Liberal sales were made for New York in Texas and secured at about current prices, which means no profit to owners, considering the first cost. The following are quoted: 17,000 lbs scoured California, 40¢@50¢; 25,000 lbs Eastern Oregon, 20¢@22¢; 15,000 lbs fine Wyoming, 15¢@50,000 lbs Territory, 18¢@23¢; 10,000 lbs washed fleeces, 35¢@40¢; 8,000 lbs No. 1 washed, 35¢; 10,000 lbs quarter blood combed, 36¢; 12,000 lbs X and XX, 3¢@32¢; 25,000 lbs short extra pulled, 21¢@40¢; 40,000 lbs Texas fall, 18¢@23¢; 30,000 lbs Texas fall, 17¢; 10,000 lbs spring, 17¢; 5,000 lbs fine unwashed, 20¢; 10,000 lbs Australian, 64¢; 500 lbs Montevideo, 26½¢; 10,000 lbs Dinkoi combed, 27¢; 10,000 lbs Dinkoi combed, 24¢; 300 bags Texas and Territories, 47¢@48¢.

Boston sold 2,860,000 lbs domestic, including 134,000 lbs California and Oregon, and 759,200 lbs foreign, at fair prices.

Philadelphia reports a good attendance of buyers and sales of 678,000 lbs.

Miscellaneous.

NEW YORK, Feb. 20.—Considerable grain has been exported, but breadstuffs as a rule are not active. The reduced Chicago elevator rates are approved here.

The decline in bar silver has some significance in the wheat interest, because it may cheapen the Indian crop near market abroad.

Lima beans sold freely, and advanced to \$2.60 at close. White were quoted at from \$2.50@2.60.

Raisins are going out steadily in jobbing way, the under grades bringing good prices, extras being scarce.

Mustard seed is entirely nominal, at from 3¼¢@4½¢.

Honey has sold at 7½¢ for large cans, State and Florida small packages at from 6¢@8¢.

Hops move only in a peddling sort of way at old prices.

Hides are not materially changed, with sales of 6700 California.

Chicago Orange Market.

CHICAGO, Feb. 17.—The weather, which has been very cold for some time, has moderated considerably this week and there are hopes that there will be no more of it this year. Florida oranges are becoming scarce and the receipts are becoming smaller, while the receipts of fruit from California, though not large at present, are increasing and will become heavier as the weather gets warmer. Desirable fruit of all kinds are firmly held. Choice small oranges, which meet with good demand, are scarce. Ordinary grades, as a rule, are slow, still there is some sale for them. Following are the prices quoted today: California Riverside, \$3 and \$3.75; California Navel, \$5.50 and \$6.25; California, other kinds, \$3 and \$3.25.

Local Markets.

BAGS—The demand for Calcuttas is slack, due chiefly to more unfavorable crop weather. With warm rains soon, it is claimed that the inquiry will improve. Standard size June-July delivery are held at 7½¢@8¢.

BARLEY—The market has been steadily gaining in strength with a very strong closing on yesterday. Trading on Call in futures was more active at advancing prices. Sales on Call yesterday were as follows:

Morning Session: Buyer season—200 tons No. 1 feed, 86½¢; 100, 86½¢; 200, 86½¢; 100, 86½¢; 1500, 86½¢; 100, 86½¢; 200, 86½¢; 100, 86½¢; 200, 86½¢; 500, 86½¢; 1000, 86½¢; 200, 86½¢.

600, 86½¢. Buyer 1888—100 tons No. 1 feed, 92½¢; 200, 92½¢; 100, 92½¢; 500, 92½¢ ½ ctl. Afternoon Session: Buyer season—100 tons No. 1 feed, 86½¢; 500, 86½¢; 1000, 86½¢. Buyer 1888—100 tons No. 1 feed, 93¢ ½ ctl.

BUTTER—The market is easier under heavier supplies of both Eastern and Californian. The demand the past few days was slower, owing to warmer weather. Some sales had to be made at less than quoted so as to clean up consignments.

CHEESE—Choice mild is very firm at full prices with another advance obtainable. The demand is exceedingly good.

EGGS—The lower market is causing a larger consumption, but as the weather is warmer consignments have to be worked off quickly so as to prevent their spoiling. The market appears steadier at the decline.

FLOUR—The market is steadier for Californian, but easier for Oregon and Washington.

WHEAT—The market has been gradually strengthening the past week in a quiet way. Buyers are operating cautiously so as not to cause prices to go up too suddenly. On Call trading the past week was more active, and at advancing prices. Yesterday's sales were as follows:

Morning Session: Buyer season—100 tons No. 1 white, \$1.39 ½; 100, \$1.39 ½; 100, \$1.39 ½ ½ ctl. Afternoon Session: Buyer season—100 tons No. 1 white, \$1.39 ½ ½ ctl.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Feb. 19, '87.	July 1 '87 to Feb. 18, '88.
Flour, qr. sks.	3,100,290	2,341,150
Wheat, cts.	10,095,023	6,227,841
Barley, cts.	1,874,719	1,761,201
Oats, cts.	113,028	138,982
Potatoes, sks.	657,162	824,181
Corn, sks.	69,502	157,073
Rye, sks.	18,954	15,605
Buckwheat, sks.	5,253	2,732
Beans, sks.	378,276	350,682
Bran, sks.	323,575	337,867
Hay, tons.	68,354	81,833
Salt, tons.	15,773	11,160
Wool, bls.	45,164	39,700
Hides, No.	71,289	67,132
Raisins, 20-lb boxes.	132,685	103,218
Quicksilver, flasks.	11,307	19,887
Hops, bls.	12,618	14,664

The receipts of certain articles of produce from Oregon, Washington Territory and other distant points, for the same period, compare as follows:

	July 1 '86 to Feb. 19, '87.	July 1 '87 to Feb. 18, '88.
Flour, sks.	96,853	175,051
Wheat, cts.	402,651	695,875
Barley, cts.	4,977	75
Oats, cts.	274,660	160,835
Corn, cts.	76,315	12,590
Wool, bales.	9,060	7,331
Bran, sks.	27,918	46,648
Hops, bales.	754	373
Hides, No.	21,994	22,889
Rye, cts.	757	757
Potatoes, sks.	59,978	27,306

Cereals.

J. E. Beerbohm's London Evening Corn Trade List of Jan. 27, in its weekly review, says: Some additional official reports regarding the Indian wheat crop have been published this week, which give the following results: In the Central Provinces the general prospects were very favorable, both as regards the area sown and the condition of the crop; area last year, 4,267,949 acres. In the Northwest Provinces and Oudh the prospects on the whole were fairly promising, the area sown being much the same as last year, viz., 4,962,942 acres. In the Punjab the want of rain appears to have caused a smaller area to be sown than in the previous year, when 5,943,400 acres were under wheat, and although the outlook at the end of December was fairly good, rain was required. In the Bombay Presidency the area sown was larger in some but smaller in other districts, the result on the whole being a slight decrease compared with the previous crop, which was produced from 2,860,454 acres; the condition, however, was on the whole good. The above-named Provinces produce two-thirds of the total wheat crop in India, and it will be seen that on the whole the outlook was good, but not by any means brilliant; the area sown appears to be about the same as in the previous year. Last week the shipments of wheat from India were only 6000 qrs. against 97,000 qrs. in the corresponding week last year; and according to last postal advices from Bombay and Calcutta there was a continued scarcity of cargo, and consequently a very dull freight market, the tonnage supply being quite in excess of the demand.

The Russian wheat crop of 1887 is now officially reported at 223,600,000 bu., not including Russian Poland, which had in 1886 a wheat crop of 30,141,000 bu.

The United Kingdom's supplies of wheat and flour from Sept. 1, 1887, to Feb. 5, 1888, have been equal to 96,722,220 bu. of wheat, comprised in 34,626,587 bu. of wheat of her own production and 62,195,632 bu. of foreign, including 19,658,024 bu., or about 30 per cent, in the form of flour, and 42,537,608 bu., 70 per cent, in wheat in the berry. The wheat crop of the United Kingdom in 1887 is probably about 76,490,576 bu., from 2,387,518 acres area, or 32 bu. per acre. The quantity already delivered to February 5th is probably about one-half that grown in 1887 that is available for food. The quantity on passage to February 1st for the United Kingdom was 11,296,000 bu. The consumption of the United Kingdom, with its 37,500,000 of population, at 5½ bu. per capita, is about 206,250,000 bu. for bread, and for feeding 2,387,518 acres, at 2½ bu., 5,371,915 bu., or about 211,621,915 bu. total annual requirements.

Eastern advices do not report any material change in the condition of crop prospects. The visible sup-

ply of wheat is being steadily reduced, that reported on Saturday last being slightly over 29,500,000 bushels, against about 61,000,000 bushels at the like time in 1887. The export movement is light, but the home consumption is very heavy. It now looks as if the supply on August 1st of this year will be less than for years, which necessarily will have a favorable effect on prices.

Oregon advices report a free movement of wheat up to Saturday, when under an improving market abroad holders were firmer in their views and not disposed to sell. The shipments to this port are very heavy in both wheat and flour. The export movements are of large proportion. Crop prospects in both Oregon and Washington Territory are reported to be good.

In this State wheat is growing quite scarce under a continued free export movement and large home demand. Choice grades of both milling and shipping are hard to get; the bulk being poor to fair with at times some parcels of good; the better grades being bought for export. The crop prospects are not so good in many sections owing to strong winds having sapped much of the moisture out of the ground. Rains even now are wanted in nearly all sections. In the local market, trading the past week was more or less restricted by the light obtainable supply of the better grades. That called choice is only good, while that called good is only fair.

In barley the market showed more activity the past week for the better grades of chevalier and brewing, under a good shipping demand. The East is drawing quite freely of bright brewing, which is getting scarce. Choice feed is doing better, and as for that, all grades show an appreciation in values. The consumption of both brewing and feed in this State is reported to be large. A large proportion of the barley for feed was either rolled or ground, for cattle and fattening hogs. The crop prospects are not as good as they were a few days ago.

Corn weakened off for fair to good, but held strong for choice. Receipts continue fair, as does the call.

Choice milling oats are scarce, but other grades are in liberal supply, with an easy tone reported. Parcels, to save expenses, can be had on wharf for less money than quoted. The consumption is reported to be good considering how cheap barley is in comparison.

Rye and buckwheat hold steady, with only a fair demand reported.

Feedstuff.

The market for ground feed shows very few changes. Bran and middlings are steady, while barley is firmer. Feedmeal is fairly steady.

Hay rules very strong. Short pasture continues in seller's favor. The supply of choice is about exhausted, while even good grades are quite scarce. Poor to fair grades constitute the bulk offering. Straw is in good demand. It is taken for chop feed purposes.

Fruits.

Choice apples are reported to be growing scarce, which strengthens other kinds.

Oranges are coming to hand more freely. The quality is improving. Poor oranges are slow and sold chiefly to peddlers. Good to choice oranges meet with a quick market for local consumption and shipping up North. Heavy shipments by rail to the East are reported. Only the best selected are being sent by several of the largest shippers.

Limes and lemons are meeting with a freer call, owing to warmer weather, but as the supply is large, prices are not quoted higher.

In dried fruits, there is a good coast demand for apples. Peaches and apricots are in good request, with prices tending up. Sales of some choice, bright peach are reported as high as 11¢ against 10¢ four weeks ago. Apricots are scarce. Plums are in good supply, but prunes are scarce, as are nectarines.

Some Turkish prunes in large hogheads have come to hand, but owing to irregular quality and general unattractive appearance, sell slow even at the low price of 5¢ per lb., Californian being taken in preference at a much higher price.

Liver raisins are about out of market. Choice loose Muscates are getting scarce. The stock of all kinds is very light, not enough to meet the home trade.

Live-Stock.

The market is strong at full prices for stall-fed bullocks and extra choice grass-fed, but weak for poor to fair and also for bullocks called good. The consumption is lighter. The supply coming in is chiefly from distant points; even Oregon is sending us both bullocks and sheep. Sheep are not quite so firm, owing to the lessened consumption and a slightly increased supply offering on the market. Veal and spring lambs are scarce and fetch good prices. Packers are out of the market for hogs, owing to the extreme high prices being against them. Several packing firms are buying, but they sell the meat to Chinamen and butchers. For this purpose large hogs are not wanted, only block hogs are required. There is a good call for stock hogs, the price being governed by the kind or breed. In milch cows, there is a good call, with fair prices paid for those in good condition and good milkers. In horses there are no changes to note; common workhorses are slow and hard to sell. The following are wanted and fetch full prices: General utility, single-footers and matched teams.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed, and one-half from the price of grass-fed, that is animals running at large).

BEEF—Stall-fed, 8½¢@9¢ per lb.; grass-fed, extra, 7½¢@8¢ per lb.; first quality, 7¢@ — per lb.; second quality, 6½¢@7¢ per lb.; third quality, 5½¢@6½¢ per lb.

VEAL—Choice, 12½¢@15¢ per lb.; fair to good, 8¢@10¢ per lb.

MUTTON—Wethers, 9¢@10¢ per lb.; ewes, 9¢@9½¢ per lb.; lamb-spring, 15¢@17½¢ per lb.

HOGS—On foot, grain-fed, 6½¢@6¾¢ per lb.; dressed 9¢@10¢ per lb.; soft, 5½¢@6¢ per lb.; dressed, 7¢@10¢ per lb. Stock hogs, 3½¢@5½¢ per lb.

Vegetables.

Receipts of potatoes continue free, causing buyers to bid down, so as to have their wants met. Although prices are shaded, yet a lower range is almost certain unless receipts fall off. Oregon is sending us liberal supplies, considerably in excess of last year at this time.

Heavy receipts of onions caused the market to shade off, with a weak feeling at the close. The

more choice good keepers are taken to fill distant orders.

Mushrooms are in free receipt. Asparagus and tomatoes come in sparingly. It is claimed that the warm belt will begin to ship quite freely next month of early vegetables. Cabbages are taken for distant shipments. The market holds firm. In root vegetables, there is nothing new to report.

Miscellaneous.

Owing to the light supply of disengaged tonnage in port, charters rule firm at last week's advance.

Shipments of dressed turkeys, geese and chickens continue to come to hand from the West. Turkeys are lower as are geese, but large, well-conditioned hens and roosters are steady; ducks are firm.

In hops there has been more inquiry for choice grades, which are hard to get. Only poor to fair are said to be obtainable. Eastern mail advices report choice being in demand.

In wools there is nothing much doing, owing to light stocks and very poor assortments. Clips of medium fine to fine in good condition, healthy, lively and clean, will sell well this year.

Bradstreet's, a leading authority at the East, gives a long table of the average rate per cent of duty on dutiable imports entered into this country for consumption, from which the following are taken:

	1880.	1881.	1882.	1883.
Hops	18.84	34.26	24.26	10.62
Clothing wool	54.79	54.72	55.64	56.28
Combing wool	46.92	46.07	46.92	51.22
Carpet wool	26.99	27.75	27.95	27.82
Total wool	44.38	41.30	37.14	36.92
Hops	18.84	1885.	1886.	1887.
Clothing wool	18.38	39.11	49.52	42.52
Combing wool	44.92	45.32	56.10	55.20
Carpet wool	42.65	42.87	44.38	42.91
Total wool	32.88	33.69	36.67	35.10

From the above, which are taken from the United States official record at Washington, it does not show that the grade of wool clothing, grown chiefly in this State, has suffered very much by the change in duty on March 3, 1883. Had prices of wool at the East and abroad ruled as high as in the first 3 years given above, the ad valorem duty would have shown a much larger increase for the last 3 years than given above.

Beans are strong at full prices, with choice to extra choice of all kinds wanted to fill Eastern orders. The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way	301,346	189,829
In port, disengaged	59,101	116,323
In port, engaged	45,234	18,103

Totals, 405,681 324,255
To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, Feb. 22, 1888.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Feb. 22, 1888.

SELF-OILING ENGINES.

Made in ten sizes, from two to sixty-horse power, and carried in stock for prompt delivery.

"ECONOMY"
PORTABLE
BOILERS.

BYRON JACKSON,
625 Sixth St., San Francisco, Cal.

For quantities of water not less than 100 gallons per minute, and for lifts not exceeding 100 feet, there is no better pump than that illustrated in the annexed engraving. It is very simple, durable, and economical. I make them in sizes from 2-inch, 100 gallons per minute, to 24-inch, with a capacity of 14,000 gallons per minute, and am prepared to build larger sizes to order. They must be set within 20 feet of the water; will draw it that far and force it up 90 feet. They are very satisfactory in wells not over 100 feet deep.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Raising a large proportion of my seed enables me to warrant its freshness and purity, as see my Vegetable and Flower Seed Catalogue for 1888, FREE for every son and daughter of Adam. It is liberally illustrated with engravings made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Cory Corn, and a score of other valuable vegetables, I invite the patronage of the public.
JAMES J. H. GREGORY, Marblehead, Mass.

Proprietors GEO. F. SILVESTER SEED HOUSE, 315 and 317 Washington St., San Francisco Cal.

OUR MANUAL OF EVERYTHING FOR THE GARDEN

is this season the grandest ever issued, containing three colored plates and superb illustrations of everything that is new, useful and rare in Seeds and Plants, together with plain directions of "How to grow them," by PETER HENDERSON. This Manual, which is a book of 140 pages, we mail to any address on receipt of 25 cents (in stamps). To all so remitting 25 cents for the Manual, we will, at the same time, send free by mail, in addition, their choice of any one of the following novelties, the price of either of which is 25 cents: One packet of the new Green and Gold Watermelon, or one packet of new Succession Cabbage, or one packet of new Zebra Zinnia, or one packet of Butterfly Pansy (see illustration), or one packet of new Mammoth Verbena, or one plant of the beautiful Moonflower, on the distinct understanding, however, that those ordering will state in what paper they saw this advertisement.

2 Natural Size.

PETER HENDERSON & CO. 35 & 37 Cortlandt St., NEW YORK.

Our "SOUTH BEND" Chilled Plows JOHN DEERE MOLINE PLOWS

CANNOT BE EQUALED FOR

Lightness of Craft, Quality of Work, Ease of Handling and Adjustment, and General Construction.

WARRANTED TO GIVE PERFECT SATISFACTION.

Look for the Name, "South Bend Chilled Plow," on the Beam, and take no other.

THIS CUT REPRESENTS OUR Nos. 1 and 1 B ONE-HORSE PLOW.

THE LEADING PLOWS ON THE PACIFIC COAST.

We take pleasure in calling special attention to our recent improvements in the construction of Plows, which consists of a brace crossing and WELDED SOLIDLY TO THE STANDARD, extending down and bolted to the land side, affording a firm brace to the standard and giving much greater strength than will be found in any other set-up handle plow. It also extends up and bolts to the handle with two T bolts, producing the best braced and finest plow made.

KEYSTONE 2-LEVER DISC HARROW.

THE KEYSTONE DISC HARROW has met with wonderful favor ever since its introduction. It is made with two levers to set the cutters at different angles while the machine is in motion, and to relieve it from clogging by throwing either gang back. It is the only Harrow made with flexible frame so the cutters can adapt themselves to the uneven surface of the ground. The discs are made of steel. The boxes are chilled-hardened to prevent cutting on the axle. It has revolving scrapers, which not only keep themselves clean, but clean the discs.

We have had a Special Size made for Orchard and Vineyard Work (viz., 5 feet), which suits the purpose for which it is intended better than any implement of its kind in the market.

PRICES:

5 FEET, 16 INCH DISCS.....	EACH, \$55 00

Which the Cuts Represent. Patented October 19, 1886.

First Premium Awarded at Mechanics' Fair, 1887.

These Plows have been in market for the past two seasons, and those that use them would not do without them at any price. All claim to save from \$2 to \$2.50 per day over any other plow. Not only for orchards and vineyards, but also for field plowing, where a two-horse single plow is used.

The Plow cuts 18 inches, weighs 160 pounds, and two horses will pull it as easily as a 12-inch plow, and does better work than a single plow. No trees are barked and sticks in vineyards pulled over where my Patent Double-trees and Singletrees are used. For Extra Shares send to me.

I ALSO MANUFACTURE ALL STYLES OF

CARTS, BUGGIES, SPRING WAGONS, CARRIAGES

AND ALL KINDS OF

VINEYARD AND AGRICULTURAL IMPLEMENTS.

Send for Testimonials and Circulars. Address

Distinguished Horticulturists.

As a souvenir of the recent meeting of the American Horticultural Society in this State, we give on this page portraits of the president and secretary of the organization from photographs taken during the session at San Jose. These two gentlemen, from the prominent part they took in the meetings and excursions, be-

deep and systematic thinker. His extempore addresses are easy and pleasing. He is pre-eminently a ready man, one who can shape and mold circumstances and conditions, and is excellently adapted to the important public work which is placed upon him by his horticultural friends. These qualities won for him the chiefship of the horticultural departments of the New Orleans Exposition and showed him to be

he has chosen that he has won honors and positions not by seeking them but by having them seek him. He is professor of horticulture and superintendent of parks at De Pauw University, Greencastle, Indiana, and from what we know of his method of instruction we are sure that young men who enjoy his teaching are fortunate. His secretaryship was inherited by the American Society from its prede-

Mules for Australia.

We have alluded to the mule as a neglected resource of California. We have a certain number of good jacks and grow some good mules—probably as fine as can be found anywhere, but there is a chance to greatly increase the mule product of the State. We have hitherto had special reference to mules for home

PARKER EARLE, President.

PROF. W. H. RAGAN, Secretary.

OFFICERS OF THE AMERICAN HORTICULTURAL SOCIETY.

came known to thousands of our citizens, and our presentation of their portraits will introduce them to thousands more. To those who know them only by the sight of their features, however, we would say that their acquaintance is but slight, for both gentlemen are so well informed and so able and pleasing in conversation that any favorable impression made by sight is immeasurably deepened by personal converse with them.

Parker Earle, president of the American Horticultural Society, is a resident of Cobden, Illinois. He is a practical horticulturist and largely interested in the growth and shipment to distant markets of small fruits and vegetables. He has had the advantage of a thorough education and is richly endowed with natural talent. His formal addresses are models of style and are marked by breadth of view and grasp of essentials which show him to be a

the man to lead the American Horticultural Society, which was organized at that exposition as a superstructure upon the excellent foundation known as the Mississippi Valley Horticultural Society, which had led a flourishing existence for several years. Mr. Earle is a man of middle life, full of force and vigor, and earnestly devoted to the elevation of the horticultural interest, commercially, intellectually, and (considering his ringing utterances on honesty in fruit-packing in the San Jose address which we published) we may also say morally.

Prof. W. H. Ragan, the secretary of the American Society, is also a man exceedingly well qualified for his work and almost heroic in the zeal and assiduity with which he discharges it. He is a self-made man, as the saying goes, and, without early advantages, has so educated himself in the lines of thought and effort which

cessor, the Mississippi Valley Society, so that, for a number of years, he has been known in the capacity in which he appeared in California. We have long admired the perseverance and tact which he has devoted to the building up of the organization, and extending its membership and usefulness. His labors are appreciated, as can be learned from the expressions of speakers at the meetings, and as was also signified by the presentation of a well filled purse at the close of the Riverside meeting. Prof. Ragan is a constant student of horticulture as well as a practical worker therein, and his published papers are notably excellent.

Our esteemed visitors, the American horticulturists, have nearly all returned to their homes. The next meeting of the Society will be held in Texas, and it is hoped that many of the California members may attend.

use, because for certain kinds of work they are exceedingly desirable, and prices for good mules have been high. It now appears that the mule as an item of export to various Pacific ports may amount to considerable. The China steamer took out in one lot last week 70 most carefully selected mules, the lot being described by horsemen who saw them as the finest mules ever seen in one band in this State. They were selected by Henry Washburn of this city for F. L. Brady, the agent sent to this State by the Continental Railway Company of Australia. The 70 mules were picked up here and there in the sections visited by Mr. Washburn, and his selection is said to have been very close. They weigh on an average 1250 pounds and range in age from four to six years. They are from 16 to 17 hands high, with short backs and large shoulders, and especially adapted to the work required.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Green Valley, Sonoma County.

EDITORS PRESS:—This is indeed the poorest time of the year for agricultural items. No one has large pumpkins, potatoes, or other productions to report, except an occasional ten-foot sucker on a plum or peach tree, which the real estate agents exhibit as a proof of the wonderful fertility of our soil and climate.

Pruning is the principal occupation at present. Some grape-growers think it is injurious for grapevines to be pruned before frosty weather is over for the season; others have their pruning finished. There is a great demand for hired help around here, especially the kind that might be called skilled labor.

Skilled farm labor may be an unknown quantity to many, yet it is a fact that it takes a man longer to learn how to handle horses, farm implements and machinery, how to prune vines and fruit trees, pack fruit and do chores, than learn any other trade, and many men who could learn to be good mechanics in a few years cannot learn to be good farm hands in a lifetime.

A great many fruit trees were planted this year; one man is reported as having set out a hundred acres to peaches, but most planting is done in small quantities. Clings were in more demand than any other variety and soonest sold out.

Some farmers when contemplating the little bundle of fruit trees a hundred dollars would buy, and then remembered what amount of produce they sold and work they expended to raise the produce for a hundred dollars, came to the conclusion that some crops pay better than others.

During the warm, moist weather of the last month the grass has made a rapid growth. Early-sown grain looks well and stock is thriving. The few cases here and in the rest of the county where sheep and lambs were reported to be dying during the cold spell can all be traced to flocks which were half starved during the preceding summer. Sheep and other domestic animals which are in good order at the approach of winter have no trouble to tide over the little inclement weather and short feed of a California winter. While the owners of thousands of sheep in Sonoma county "which could not be sold at a dollar apiece this winter," were going around howling for protection to their industry; while Sonoma county butchers were buying dressed muttons in San Francisco for six or seven dollars apiece, and paying half a dollar freight on them besides, the barns of Sonoma county farmers were filled with hay for which there was no sale. Sonoma county wheat was being shipped to Europe and sold for less than cost, and Sonoma county flock-masters were feeding themselves and their hired help on Chicago corned beef at the rate of 12½ cents per pound, and such beef! If they could but see a Chicago steer before canning time, they would sooner eat one of their own poor starving sheep, and that is putting it pretty strong.

Some orchardists around here claim that in nature the shedding leaves and other causes slowly form a slight elevation of the soil around a growing tree, while in an orchard plowing and the washing away by rains tend to work the soil away from the tree and expose the roots. To obviate this they only plow toward the tree and then try to level the soil as much as possible with cultivators. One point in favor of this plan is that it affords a much better drainage for heavy late spring rains which are said to be the cause of blight, curled leaf, dropping fruit, etc.

A young friend of mine has been investigating the history of early fruit-tree introduction in Green valley with the following results. The first trees were planted here in 1851 and were seedlings. In '52 or '53 four or five of the old settlers got small lots of grafted trees for which they paid \$1.50 and \$2 each, but most of the old orchards were planted in '54 with trees brought from Oregon.

In the orchard of C. Winkler he was shown a large, healthy peach tree planted in '53, an apple tree measured 57 inches in circumference, and Mr. Winkler said he had often picked over a ton of apples from a single tree. J. Purrington said he had counted 40 boxes of apples put in the bin from one tree, while the ground was covered with bruised ones. Major Sullivan said he had the largest tree in the valley and had shipped 40 boxes of first-class apples from it to San Francisco one season. There is a prevailing idea that trees in California are short-lived and do not grow as stately as in other countries. Major Sullivan has a black walnut planted from the seed 23 years ago this spring. The main trunk of this tree runs straight up till almost the very top, which overtops some very tall eucalyptus trees, and is twice as high as the old black oaks on the place. The trunk of the tree is over two feet in diameter, without a side branch, and nearly the same thickness some 20 feet from the ground. It produces many sacks of nuts yearly. The crown has an immense spread, and it is as beautiful and majestic a tree as any Eastern-State man ever saw.

A GRANGER.

Crops and Cultures on Bouldin Island.

EDITORS PRESS:—Never having read any extended description of this (to me) interesting part of the country, I will attempt to give your readers a faint glimpse of the wonders and strange sights of this land of the mosquito and Chinaman, better known as the "tule" regions of Sacramento and San Joaquin counties.

This immense tract of swamp land extends from Stockton on the south down both banks of the San Joaquin river to its junction with the Sacramento, thence up the last-named stream to a point far above the capital city, and contains within its limits several million acres of the most fertile soil on the Pacific Coast.

Up to the present time, however, but a very small portion of this tule land has been reclaimed and brought under cultivation, but the time will come when every acre will be occupied, and all this dreary waste become the home of many thousands of thrifty people, where now are seen scarce anything but broad lagoons and waving cat-tail rushes as far as eye can reach.

Going ashore at Bouldin island from the steamer City of Stockton at 10 o'clock P. M. one dark night in July last, I was met and warmly received by a large and enthusiastic delegation of the aboriginal settlers of this small but enterprising port, who for genuine hospitality and strict attention to business can be successfully pitted against "skeeters" from any part of the known world.

One of my fellow-passengers of the thin-skinned genus made the attempt to go ashore to take a brief view of the town by lamp-light, but before reaching the end of the gangplank came rushing back crying out that he wouldn't "stop off" there for the best ranch on the island.

However, with more faith in the toughness of my "hide" and a strong desire to explore the interior of this mysterious land, I concluded to spend the night here and see what might be revealed by the light of day.

The next morning, bright and early, I chartered a horse and what the owner called a "jerk cart" (I found out before night why it was so named), and with copious directions went forth on my journey around, across and over this great garden-patch called Bouldin island, in honor of the Bouldin brothers, pioneers of Western San Joaquin county.

I found the island completely encircled by a very substantial-looking levee, from 10 to 20 feet high and extending in curved and zigzag lines for a distance of 28 miles, thus forming a secure and lasting barrier against the raging waters of the two great rivers, the San Joaquin and the Mokelumne, whose channels, with the aid of what is called "Potato slough," form the boundaries of this valuable tract.

The island contains nearly 30,000 acres of the richest land on the coast, and almost the entire surface of it is under the highest cultivation. As an illustration of what can be done on this reclaimed land in the line of vegetables, I was shown one place where the owner measured off one acre in a field of 200, and on digging the crop found he had 240 sacks of choice Early Rose potatoes, but this was on new ground and was above the average of the island at large.

The greater portion of Bouldin is devoted to the production of potatoes, beans and onions, although there are several large hay ranches where great quantities of barley and alfalfa hay are grown; five crops of alfalfa and clover are quite common here in one season. Other portions are planted to small fruits, blackberries, strawberries, currants and the like, all of which thrive well and bear heavily here.

There is one feature about this part of the country that surprised me more than any other, and that was that irrigation has not only been found profitable but practicable here. The reader must bear in mind that this whole island, prior to reclamation, was almost a dead level, covered at high tide to a depth of two to four feet by the ever-changing waters of the surrounding rivers.

Now, it seems that as soon as this overflow is shut off by the levees this tule land will dry out as quickly as what we call the upland away back in the interior away from the water. Taking advantage of the rising tide, the farmers put in sluices or waterways through the levees at low-water mark, and, fitting tide-gates to them, they have perfect control over the water and can irrigate their crops at pleasure.

They mostly depend upon irrigation, by seepage from small ditches out in all directions through their fields, as it has been demonstrated that flooding the land while the crops are growing is almost sure to kill the vegetation, due principally to the hot sun scalding the plant and baking the ground.

To any one accustomed to the small farms of the Eastern States, or even to those who have followed wheat-raising exclusively in California, it seems almost miraculous to see the immense number of acres planted to vegetables and fruit in some parts of this wonderful country.

Here can be found many fields of potatoes from 100 to 200 acres each, and beans and onions almost in the same ratio. Indeed, unless a man has at least 100 acres of "garden truck," he is hardly counted in as one of the farmers of Bouldin island.

Nearly all of the labor here is done by Chi-

nese. In many cases they rent the land from the white owners, who mostly live in San Francisco or Stockton. In looking across these vast fields, hundreds of Chinamen can be seen, working in gangs of 25 or 30, reminding one of the pictures I have seen of the slaves in the cotton-fields of the Southern States in antebellum days.

I hear but little said about driving out these coolies who work on the tule land. I have a very decided opinion that if some of the most blatant Chinese haters could be compelled to take the places of these Chinamen here for just one week, they, "the howlers," would be content to let the "Johns" fight the mosquitoes and take the pay, which is poor enough at best.

But I have spun this article out far beyond the limits I intended, and will postpone a notice of some other equally interesting points near by to another article. W. W.

Napa County Notes.

EDITORS PRESS:—The opening season is, for the whole of Napa county, one of promise, not only to the farmer, but to the merchant and artisan as well. The cold snap in January was followed by warm and gentle rains that caused vegetation of all kinds to rapidly forge ahead. Our total rainfall at Napa City, for the season, is 12 inches. Very little has run off in the ditches or larger water-courses. Early-sown grain is looking very fine indeed, and the later sown is doing well. Some farmers finished seeding a week or two ago. Many are busy at work, hoping to have their grain crops all in by the end of next week. But every year the acreage devoted to wheat and other grain decreases, and fruit trees and vines are planted instead.

Vineyard and Orchard.

Our vineyardists have been busy for some time pruning and preparing to plow their extensive yards. This season many yards will come into bearing, new ones will be planted and old ones enlarged. Large quantities of wine are now being shipped from various points in Napa valley to San Francisco and other cities and towns in this State and those east of the Rockies. Several of our wine-makers obtained diplomas for their products at the last Mechanics' Fair in San Francisco, and that has greatly stimulated our producers. A finer quality of wine than that made in this valley cannot be procured.

The number of fruit trees of all varieties grown in this section of the State that have been sold here this season exceeds by far that of any former year. Very early in the fall it was evident that the stock of French prunes would soon be exhausted, and long since the trees were at a premium.

Peaches, pears and apples, cherries and apricots do so well with us, we are so near market, and prices last season were so satisfactory, the business of fruit-growing has received great impetus, and the prophecy that as the upper portion of Napa valley is almost entirely devoted to grape-growing, so the lower part will be given up to fruit-producing, is being fulfilled. As regards shipping our fruit, we have facilities surpassed by those of no other locality.

Small Fruits.

Berries of various kinds, which are raised in Napa valley to some considerable extent, and the larger fruits, can be placed on board our river steamboats at night, and early the next morning, fresh as when first gathered, are placed on the San Francisco market.

Only a few years since it was thought the small fruits could not be raised here successfully unless they were irrigated. It has been found that strawberries, raspberries and blackberries grow to perfection, and gradually the area devoted to them is enlarging. Certain it is the first two berries mentioned are among the most profitable fruits grown here, for they are always in good demand at good prices. Currants and gooseberries are grown to some extent, and are sold in the local markets or are shipped to San Francisco.

Canning.

Our well-equipped cannery stands all ready for some man who understands the business to open it at once. It can be bought for a small figure, or could probably be rented on easy terms. Excellent fruit in great variety can be procured in the valley. We annually ship large quantities to Oakland and San Jose canneries. Napa valley fruit has obtained a wide and merited reputation. Our cannery is situated near the bank of Napa river, and directly in front of it runs the track of the S. P. R. R.

Various Matters.

Olive culture is, in time, to be one of the prominent industries of our county. A large number of the trees have been planted this season. They grow well in any portion of the county, as has been proved by experiments in the past. Orchards three and four years old have made a very fine growth.

It is reported that a large addition to the force of men for some time employed on the San Francisco & Clear Lake railroad will be made at an early date and the work of grading vigorously prosecuted. Several miles have already been graded. The completion of this road means much for this county and more for Lake. Our own resources are but partially developed, while those of our sister county,

varied and large, are realized by but few persons.

In Napa City a war has been declared upon acacia trees, as it was found that, as elsewhere in the State, they were breeders of the cottony cushion scale. Locust trees were also attacked and of late many of these trees, that have attained quite a large growth, have been purchased by San Francisco parties for shipbuilding purposes, the price paid being at the rate of \$30 per ton; about three cords to the ton. This demand comes in good time. In the place of these trees removed others of greater attractiveness will be planted. Eucalyptus trees, popular with the masses a decade ago, were some time since condemned on account of their robbing the soil of so much nutriment. Now locust trees must go. Elms and maples are growing in popularity. An effort is making to plant both sides of the main county road, from Napa City up the entire length of this valley, with shade trees; the road will be nicely graded and macadamized. This plan fully carried out, we shall have one of the finest and longest drives in the State. So you see our county is forging ahead in the way of improvements and general prosperity. New-comers arrive frequently and purchase farms of greater or less extent, and more are expected once the weather becomes settled. The real estate firms of Napa City are to send a man East in a day or two to present our advantages to the people of States not blessed with so lovely a climate as we enjoy, for we are as anxious to have our population increase as all other sections of our favored State. Our lands are held at reasonable figures and will certainly never be lower. A. W. R.

Napa, Feb. 20, 1888.

SWINE YARD.

A Large Packing Enterprise.

All efforts to increase home production of meat products to supplant importations are interesting to local stock-growers. The Oakland Enquirer gives the following account of an enterprise to be established on the east side of the Bay of San Francisco:

The plans of the Chicago Packing & Provision Company are being matured very rapidly, and the contract has been already let for the erection of the company's main building on the ten-acre tract, between Butchertown and Posen station, which was bought of George W. Grayson. Some of the brick has arrived and the foundation is being laid. The building will be built entirely of brick, the difference between the cost of lumber and brick being now so small that the directors have decided to use brick. It will be an imposing building, four stories high and 250 feet long by 171 feet deep. It will stand on the east side of the railroad.

In arrangement the building will be like the model packing-houses of Chicago. There will be an inclined plane up which the pigs will be driven into the third story. From this floor they are snatched up, one by one, to the fourth floor, where they are slaughtered, soured into the scalding tanks, run through the scraper and their entrails removed. They are dropped down to the floor where the chilling-room is situated, cut up, and, finally, when they reach the cellar, the porkers are barreled ready for export.

The establishment will have a capacity for killing 2000 hogs a day, but as it is anticipated that it will at first be difficult to obtain that many pigs, the attention of the company will be largely devoted at first to beef-packing and beef-canning. Most of the machinery will be manufactured in San Francisco by Hinckley, Spiers & Hayes, but the wonderful scraping machine, which denudes a big porker of all his bristles in a twinkling, will have to be bought in Chicago, as it is a patented invention. Mr. Boyer, who came out to superintend the erection of the building, is now in Chicago making this purchase. All the machinery when set up will cost at least \$30,000. A force of 500 men will be employed when the establishment is in full blast.

The authorized capital of the company is \$500,000, of which \$200,000 has been subscribed. The plant which is to be erected will cost \$110,000. Mr. J. P. McElroy, from whom this information is obtained, states that it is not true, as reported, that Senator Jones is a large stockholder in the company. Mr. W. Selover invests \$50,000, and among the Oakland stockholders are G. W. Grayson, H. D. Blaisdell, J. S. Emery, Pierce & Co., F. M. Smith, J. P. McElroy, D. R. Burns, A. J. Snyder, J. M. Foy, Lannigan Brothers, W. W. Camron, J. H. Joyce, D. D. Hayes, A. S. McDonald, Hinckley, Spiers & Hayes, M. B. Curtis and E. A. Bushnell. In San Francisco, Strauss & Derby and S. Solman & Co. are among the stockholders.

The calculation of the company is that by the employment of labor-saving machinery and improved processes as much as 25 per cent can be saved on the methods of pork-packing in use on this coast.

A question which the company has considered long and anxiously is that of the supply of hogs. It is admitted that the supply is limited, but it is believed that it will become equal to the demand when farmers are assured of a good market all the year round. The price of

hogs sometimes drops here to two and one-half cents a pound, whereas, in Chicago, it is from four to five cents at all times. Eastern hogs are generally fed on corn, and it has been asserted that good corn cannot be raised here because so little corn is grown. This the company does not believe. It holds that hogs can be raised on alfalfa and put in condition on barley. Moreover, in the coast valleys good crops of corn can be raised if a market is assured.

HORTICULTURE.

Rare Fruits in Santa Barbara.

The following article by Prof. H. C. Ford of Santa Barbara was read at the recent meeting of the American Horticultural Society at Riverside by Mr. H. K. Bradbury:

That portion of Santa Barbara county lying between the Santa Ynez range of mountains and the Santa Barbara channel, with an east and west trend of the shoreline, having a southern exposure, with protections on land from the north winds in a mountain-wall from 3000 to 4000 feet in height, and on the other a chain of outlying islands that breaks the force of the summer trades, together with the close proximity of a body of water which maintains a uniform temperature of 62 degrees, renders this district fitted for the production of certain fruits, some of which are not generally supposed to thrive without protection within the limits of the United States. The temperature of this region seldom falls below 40 degrees or rises above 90 degrees, with an average rainfall of 17 inches. The cherimoyer, white sapote, avocado, date, banana and guava will not thrive where there is much frost, while Japan persimmons, pomegranates and loquats will bear a greater degree of cold, and consequently will find a wider range of growth in our country.

The cherimoyer (*Anona cherimolia*) is a native of Peru, and Humboldt, on his visit there, denominated it as one of the most delicious fruits of the earth. It was introduced into this region about 25 years ago. The parent tree, now standing on the grounds of A. Packard, Esq., has attained its full height of 16 feet, and has produced abundant fruit for many years in such perfection that the seeds have readily germinated, and trees thus propagated have been in successful bearing in several Santa Barbara gardens. The leaves are oval and pointed at both ends; flowers solitary, very fragrant and having a greenish color. Good specimens of the fruit are three or four inches in diameter, often heart-shaped, brown or nearly black when fully ripe. The flesh, in which 30 or 40 brown seeds are found, is soft, sweet and pleasant to the taste, being highly esteemed in its own land both by natives and foreigners. Like many other tropical fruits, it is most palatable when near decay. By many persons in this locality it is pronounced excellent, while others speak of it with indifference. Apparently it has no particular season for ripening in this neighborhood, yet the best specimens seem to be found at the April and May exhibitions of fruit.

In the grounds once occupied by the Mission gardens is a tree about two feet in diameter, with sturdy, upright branches forming a beautiful head of dark-green leaves. This is the white sapote (*Casimiroa Edulis*) and planted about 90 years ago by one of the Mission fathers; as near as can be ascertained, there is another tree of the same species growing in a garden in the lower part of the city of Santa Barbara, that came from seed received from Mexico planted about 45 years ago. It is growing both wild and cultivated in the States of Sinaloa and Durango, and elsewhere in Mexico, and is known there as the Zapote blanco. It belongs to the Rutaceæ and is more nearly allied to the orange than any other American plant. Its leaves are palmate, three to four parted with glistening upper surface; flowers small, greenish-yellow, growing in clusters with short peduncles on the old wood. Here the tree is usually in flower during January, often earlier, the fruit maturing in March or April. It varies from half an inch to an inch in diameter, pale yellow in color, and is not agreeable to the taste until in a soft state. It has a rich sub-acid flavor, our native Californians being exceedingly fond of the fruit. The older tree is about 25 feet high and has about the same spread of branches, while the younger is nearly as large, both forming fine heads of dense evergreen foliage, making it desirable as an ornamental tree for street or other planting, and would no doubt bear the climatic conditions of many other localities.

A tree of the tropical species, Alligator Pear, or Avocado (*Laurus persea*), is flourishing on the grounds of Mrs. F. Sawyer of Montecito. It was planted by Mr. S. L. Bond, 16 years ago, and has borne fruit for the past three years, which has appeared at our horticultural exhibitions. This tree is almost 20 feet in height, and appears in a thriving condition; the bark is smooth; leaves, oblong, with prominent veins; flowers, yellowish-green; fruit, purple in color, with the dimensions of a medium-sized pear, but more oval in shape. It contains a kernel inclosed in a soft rind, and yellowish pulp. The latter has the delicate, rich flavor of the peach, yet to me it tastes much more gratifying. In the West Indies, the inhabitants, on account of its richness, apply some spices, or acid, such as lime juice mixed with sugar. Of the three varieties

there grown, red, purple and green, the latter seems to be the favorite. In its native habitat it is eaten with avidity, not alone by man, but by birds and quadrupeds. The seeds of the fruit raised here are sufficiently perfected as to possess the germinating property. A small tree that has not yet borne fruit is flourishing in the garden of Judge Ord, in the city of Santa Barbara.

The date palm (*Phoenix dactylifera*) has perfected its fruit on the estate of the late W. W. Hollister for the past three years, fine branches of dates from this plantation having been exhibited at New Orleans at the late exposition, at the State Fair at Sacramento, at Los Angeles, and at the local exhibitions of the Santa Barbara Horticultural Society. These palms are now about 16 years old. They are carefully cultivated and irrigated several times during the drier portions of the year. The suckers that spring from the base of the trunk in the earlier years of the palm are annually removed. This palm being dioecious, it is necessary to hang the staminate flowers over the pistillate blooms in order to insure proper fructification, when the male and female trees are not planted in close proximity. Palms of this species have fruited in a few other localities in the State, but the product has not been as satisfactory as at the place under consideration. That the raising of dates for market will ever be a profitable industry in this special district or any other locality in California, is a problem for horticulturists to solve, but the results already obtained certainly render further experimentation desirable.

Among the tropical fruits that find here suitable conditions is the guava (*Psidium pyrifera*), examples of which are found in numerous Santa Barbara gardens. In its wild state in the West Indies it is a large shrub, but in cultivation it attains the dimensions of a tree five or six inches in diameter of trunk. The wood is exceedingly hard and tough, the leaves are about three inches long in pairs opposite each other, the flowers white with an agreeable perfume. The fruit is from one to three inches in diameter, having a smooth skin and a peculiar musky odor that is disagreeable to most persons. The seeds are contained in a flesh-colored pulp that is sweet, aromatic and very palatable, the pleasant taste lingering some time after eating it. It is used as a dessert fruit, and is preserved with sugar. The jelly made from this fruit has long been universally esteemed. Excellent products from home-grown fruit have been prepared by Santa Barbara housewives. To insure success in the preparation of the jelly, partially ripened fruit should be used.

The strawberry guava (*Psidium cattleianum*) is a variety that is now being planted quite extensively, being a more hardy species. It is a smaller fruit than the preceding, being less than an inch long, purple in color and of a rich flavor, somewhat resembling strawberries. This tree attains the height of 20 feet at full maturity.

The banana (*Musa Sapientum*) has been planted in almost every garden in our neighborhood, and fine branches of fruit have been perfected. It is not claimed that the fruit reaches so high a degree of perfection as in the tropics, but certainly excellent, well-ripened and flavored specimens are not uncommon, and it is believed that with more care as to situations, and by planting in large groups with high fertilization and proper irrigation, much better results may be attained. One grower in Montecito asserted that on every day of the 365 his family was supplied with ripe fruit from his plantation, principally from the *Musa Cavendishii*, the dwarf species.

The noble Abyssinian banana, *Musa Ensete*, is being quite widely planted for its superb tropical appearance in the landscape, but its fruit is pulpy and of no value.

Of other fruits drawn from sub-tropical regions, the Granadilla, *Passiflora Edulis* Water lemon, purple when fully ripe and pleasing to many tastes; the Tuna, *Opuntia tuna*, a refreshing fruit introduced by the Franciscan fathers and much esteemed by the native Californians, and the Eugenia, *Eugenia Myrtifolia*, from Australia, a highly ornamental tree with bright green foliage and a pleasant flavored fruit about the size of a cherry, may be mentioned in this list.

The Loquat, *Eriobotrya Japonica*, which Rhind in his "Vegetable Kingdom" ranks as a tropical fruit, is produced here at as great perfection as in its home climate. Being a native of Japan, it also thrives in a region of our Southern States bordering the Gulf of Mexico, as well as throughout Central and Southern California. It is in blossom in the early winter months, and by March and April the fruit is to be obtained in our markets, where it finds ready purchasers. Ripening at a time when other fruits are comparatively scarce, with its delightful and refreshing flavor, it promises to become still more popular. Efforts are being made to introduce a new variety from Japan that is said to be much larger in size than now planted, having more pulp, with smaller seeds. Belonging to the Pomaceæ, it may be grafted on any species of this genus. The long, dark green and rigid leaves, the deliciously fragrant flowers and the golden clusters of fruit, render it a favorite in our ornamental planting. The fruit will bear shipping and would no doubt find favor in our Eastern markets.

The pomegranate (*Punica granatum*) seems to have been first introduced by the Mission fathers to this region, and there are still living a number of trees of great age in the Mission

gardens. The tree at maturity is from 15 to 20 feet in height, having numerous slender branches often armed with thorns. The leaves are opposite, about three inches long and of a beautiful green. The flowers are produced at the end of the branches on the new shoots; the calyx is very thick and fruity, and of a fine red color, the petals being crimped and scarlet. The beauty of the tree, not taking the fruit into account, has caused it to be planted in many of our gardens. The fruit is a large berry, covered with a hard, leathery coat and crowned with the tube of the calyx, contributing to its singular and beautiful appearance. A large number of seeds are contained in the crimson-colored pulp, which has a slightly sub-acid flavor, agreeable and refreshing, although it requires some dexterity to separate it from its leathery covering without getting some of the juice or flavor of the latter in the mouth, which, owing to this skin being very rich in tannin, is quite astringent and bitter. It is ripened here in October, but if not then gathered will remain on the tree for several months in good condition. To bring the fruit to its greatest perfection, careful cultivation is required; in fact, a neglect of this will be paid in a penalty of barren trees. Fine specimens are always shown at our autumn exhibitions, and it is occasionally found in our markets. With proper attention it might be profitably grown.

I will briefly refer to the Japan persimmon (*Diospyros Kaki*), which is raised in this district with the most satisfactory development. This fruit is rapidly and justly growing in popular favor. Natives of the Southern States, who have been accustomed to our native persimmon, are enthusiastic when they taste the Japan fruit. Its astringent quality entirely disappears when the pulp becomes soft. It is easily transported when picked at the proper stage, and doubtless it could be shipped to advantage to Eastern markets, where its splendid color would certainly make a unique adornment for the table. It is now sold in our markets at five cents per pound, but often commands a higher rate. This fruit can be grown in any portion of the United States where the temperature does not fall below 14 degrees above zero.

The Lichi of China, *Hovenia dulcis* of Japan, and *Carica papaya* of Peru have been introduced, but the trees are not yet old enough to produce fruit. It need not be stated that the conditions favorable to the growth of such fruits as we have under consideration are also congenial to the whole citrus family as well as the fig and the olive. Add to these the whole range of temperate climate fruits. Where is the land that can furnish a greater variety of such productions grown in the open air than California?

SHEEP AND WOOL.

Manure Factories on Waste Land.

EDITORS PRESS:—"Feed the land and it will feed you." But how to make the land furnish the feed is the enigma. To buy fertilizers is a move forward that our California farmers are slow to make. To follow the Eastern practice of sowing some heavy-growing grass and plowing it under is not practicable save on moist lands or those lying under the line of the ditch. In the course of an evening's conversation with that veteran Angora goat-breeder, N. Gilmore of El Dorado, El Dorado Co., he gave me a solution of this question, which, as his modesty and want of time prevent his writing it up for the readers of the RURAL, I will try and give it instead.

In England the farmers hire sheep and turn them on to their fields to eat what would otherwise be waste and convert it into a prime fertilizer. Our California ranchers do better. The header clips but the top off of the grain; then the sheep are turned in at so much a head to fatten on the stubble, and the rancher goes on year after year cutting grain from the same fields, crediting his large and continuous yields to the original fertility of the soil, though a moment's thought will show him it is the returning to the soil of the stubble in the form of an exceedingly rich and concentrated fertilizer that keeps his soil up to its virgin strength. Now all ranches do not grow wheat, but almost all mountain ranches have more or less waste land that is thickly covered with brush; much of this land is comparatively new and consequently poor. To fertilize this land from the brush growing on it, and at the same time secure on the ranch a supply of manure equal to guano for the better land, requires but a small outlay of money and gives larger returns for the amount invested than can be realized from a like amount placed in any other way. Fence in the waste land with a six-strand barbed-wire fence, which, if properly built, will effectually keep out dogs and coyotes. Stock the inclosure with as many goats and no more than it will sustain. In the center of the inclosure build a shed with movable slat floors. The droppings will fall through the slats and thus keep the goats clean. The floor can be raised at any time and a bonanza in fertilizing material removed. If you doubt its value you can go to any successful Italian gardener, see how, when his onion-bed is all ready for the onion sets, he rakes into the surface a light dressing of goat manure and watch

the results. The profit, however, is not confined to the manure. The goats in themselves pay well under the circumstances. What they eat costs nothing, so that all that is realized from them over the original cost is clear profit. The best Angora goats can be bought for \$25; common, 75 cents to \$1.50. A thoroughbred Angora will yield:

Value of carcass.....	\$1 50
Value of mohair.....	1 00
Value of skin mat.....	5 00—\$7 50

Cost of preparing skin for mat.....2 00

Gives as profit on each goat.....	\$5 50
While the manure is worth.....	5 00

Or for a two-year-old goat.....\$10 50

How can you do better on land that at present is returning less than nothing? If you say "goat meat is only eaten by foreigners," I would call your attention to the fact that for a year past "a kid dinner" is the dinner in New York's best families. To eat it is to love it. Would the foothill mountain rancher but try the goat, keeping just what his land will carry in good condition, and his fields will soon return him ten-fold for his labor.

E. H. SCHAEFFLE.

Murphys, Cal., Feb. 15, 1888.

POULTRY YARD.

Different Breeds for Different Uses.

EDITORS PRESS:—Have you ever known an intelligent and honest breeder of Herefords claim that in butter-making qualities they were equal to the Jerseys? I think not, and yet we are constantly told that the table varieties of poultry under the same treatment lay equally well or better than the egg-laying strains of fowls. I have been raising fowls for 20 years, and so far I have found no one whose experience under the same circumstances varies from my own. When I want eggs I take the Brown Leghorn, not your scrub Leghorn of untraceable parentage, but a few of the cream of the Leghorns that will all score over 90 points and then I find them unlike the table varieties. They refuse to put on fat, but shell out the eggs in such quantities as to convince the most skeptical. If I desire a larger egg and am not particular about so continuous a layer, the Minorca fills the bill. When I want a fowl for my table I take one of my 12-pound Buff Cochins or the game-flavored Langshan, though the Cochin is preferred, as he has no dark pinfeathers to mar the skin. Many prefer the bright yellow-skinned Leghorns for the table, but the quantity is not there any more than the eggs are in the Buff Cochin. All fowls are good in their places, none the best all places.

E. H. SCHAEFFLE.

Murphys, Cal., Feb. 15, 1888.

EGGS BY WEIGHT.—With regard to the oft-mooted question of selling eggs by count or by weight, the *Rural Messenger* remarks: All forms of meat are sold by the pound. But when we come to eggs, the richest and most concentrated form of meat, the universal custom is to sell by the dozen, regardless of the fact that there is something more than a pound difference in the weight, and the quality of matter varies in a dozen eggs of different breeds. Of Guinea-hens and Bantam eggs about 16 are required to the pound, but the eggs of the pure Brahmas, Cochins and other large breeds weigh over two pounds to the dozen, or six eggs to the pound. Here is a difference of about ten eggs, or say 90 cents, in favor of the breeder of small varieties of fowls, and a loss of more than a pound of the best form of meat to the purchaser of the small eggs when he buys by the dozen. It is clear enough that this is not quite fair for the breeder of large eggs nor the consumer of small ones. The only equitable way would be to sell by weight, giving the purchaser his choice between large and small eggs. As it is now, the breeders of large sorts of fowls are placed at a disadvantage in order to compete with those who handle smaller breeds.

PERILS OF THE CHICKEN ROOST.—Among the many difficulties and disadvantages attending the raising of poultry, the losses by predatory animals in some cases enters as a factor of no mean proportions. In exposed situations, a thieving skunk or wildcat will clean out the entire establishment by regularly repeated raids, if not killed or effectually barred out. Mr. J. J. Jones of the Alhambra Poultry Yards is perhaps as carefully protected by wire fences as one would consider necessary, yet a weak place was found through which a wildcat contrived to squeeze, a few nights ago, and select, as they generally do, one of the finest and most valuable fowls in the inclosure, which he transferred to some more convenient spot for final disposition. Then Mr. Jones went for that animal with traps judiciously spread around where he would be most likely to make their acquaintance. In the morning he found several of them had been interviewed and sprung, and in one, locked in vigorous embrace, was the neatly amputated toe of the wildcat, the balance of his anatomy having escaped. Worse luck for him next time.—*Martinez Gazette*.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Sonoma County Granges.

Members of the Order in Sonoma county are alive to the work that is to be done. From Sebastopol Grange we have words of progress and improvement. Saturday next, March 3d, they will confer the third and fourth degrees on a class of eight new members. The usual and necessary Harvest Feast will be spread and enjoyed. Report has it that the Worthy Overseer of the State Grange, Brother E. W. Davis, will be present.

Bennett Valley Grange is also having a boom. Another class of eight members are now ready to obtain the mysteries of the Order as taught therein.

Santa Rosa Grange is also growing in membership. The first and second degrees will be conferred at the next meeting. The section-work and discussions in Santa Rosa Grange are drawing well. The attendance is largely increased, and a new interest seems manifest.

Brother L. J. Hawkins, the Assistant Steward of Santa Rosa Grange, met an untimely death February 14th, by a pistol-shot from his own hands, whether accidental or suicidal is unknown, as he was alone when shot. He was buried by the Odd Fellows, but the members of Santa Rosa Grange were in attendance in large numbers.

Brother Hawkins was an enthusiastic Patron, and his death leaves a vacancy in the ranks of the Order that will be difficult to fill. Bro. O. V. Ort, an enthusiastic and vigorous worker in the Grange cause, has been elected Assistant Steward of Santa Rosa Grange, to fill the vacancy caused by the death of Brother L. J. Hawkins.

From Two Rock Grange we hear but little, but all that we hear is of a favorable nature.

It is painful to report that in the flourishing city of Healdsburg there is no Subordinate Grange. There is not a more flourishing agricultural city in this State than Healdsburg. The farmers thereabout are thrifty, intelligent and progressive, and yet they have no Grange. What has been said of Healdsburg can as well and truthfully be said of Petaluma, Sonoma and Cloverdale. It is hoped that our new District Lecturer, S. T. Coulter, and our worthy Overseer, E. W. Davis, will not long allow these thrifty neighbors to be without the advantages of a Subordinate Grange in each locality named.

[Official Notice.]

Important Meeting of Officers.

The newly appointed Deputy Lecturers are requested to meet at the office of the Secretary of the State Grange, 220 Market street, S. F., at 10 A. M. Friday, April 6th, together with all officers and Past Masters of the State Grange and their wives who are Matrons. This meeting is for a conference concerning matters relating to the Good of the Order, and to devise plans for the future work and progress of the Grange.

Among other subjects to be presented is that of arranging the time of holding picnics in different parts of the State, in such order as to make it convenient for State officers and other speakers and Patrons to visit the same in rotation.

It is hoped that every officer will respond promptly and come prepared with suggestions for the Good of the Order and fully prepared for effective work.

W. L. OVERHISER, Master.

A. T. DEWEY, Secretary.

San Francisco, Feb. 28, 1888.

Grange Election.

CERES GRANGE.—V. E. Bangs, M.; M. J. Hall, O.; Mrs. H. M. Whitmore, L.; P. P. Siles, S.; H. W. Brouse, A. S.; Mrs. E. Carner, Chap.; M. M. Williams, Treas.; Mrs. A. Chapin, Sec.; Mrs. Annie Whitmore, G. K.; Miss Nettie Brouse, Pomona; Miss Susie Bangs, Flora; Mrs. M. J. Hall, Ceres; Miss Sarah Carner, L. A. S.; Mrs. R. M. Williams, Organist.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Grange and the Order.

SELECT DEPUTY LECTURERS.—Different counties have recommended the names of those they prefer the Master of the State Grange should appoint as Deputy Lecturers. But quite a number of counties are yet to be heard from. This is an important matter, Patrons. The Masters of every county should see to it that the recommendations are no longer delayed.

MEMORIAL RESOLUTIONS on the death of Sister Margaret Coates were passed by San Jose Grange at its meeting on the 18th ult.

The Worthy Master's Squirrel-Smoker.

If Bro. Overhiser shows as much zeal in keeping the Grange alive as he does in exterminating squirrels he will prove a grand success. It is well known that this brother never does anything by halves. He has the biggest smoker in the land, and he does not care what the tariff is on tobacco; he proposes to smoke all the same, and to the destruction of every squirrel in his section. He has a sheet-iron cylinder, six feet long and one foot in diameter, attached to the hind end of a spring wagon. There is a rubber hose, one and a half inches in diameter and twelve feet long, one end coupled to the cylinder, within eighteen inches of the bottom, and the other end attached to a pair of bellows fastened in front of the wagon. The sides and front end of the wagon are boarded up four feet high to hold the fuel which consists of straw and barn-yard litter, to which is added sulphur or crude brimstone. I told the brother there would be no loss in this experiment for if the thing did not kill squirrels it could be easily converted into a telescope or a huge sausage-filler.

It was taken into the field, where there was a regular nest or village of squirrels, and inserted into one of the holes and the fire and blower started. Within fifteen minutes smoke was seen issuing from 25 to 30 holes which were filled with dirt. One of these holes, by measurement, was found to be 60 feet from the machine. Such pressure was put upon the smoke that it could be seen issuing from the ground where there was no sign of a hole.

I heard the brother offer to take contracts by the acre from his neighbors, to exterminate every living thing that burrows in the ground. I cannot imagine how this thing ever entered his fertile brain, unless he had been dreaming of the rabbit drives and tomale picnics they have had lately in Tulare county.—D. F. in Patron.

San Joaquin Pomona Grange.

Bro. Flint, W. L. S. G., chanced to be near Lodi on business February 23d, and learning that the Pomona Grange was in session, made them a visit. A part of his report is as follows:

"I found a goodly number of the substantial Patrons of this section present. I was much pleased to see so many take an active part in the proceedings, and especially the sisters, who showed a readiness in debate and aptness to supply or suggest words to motions or resolutions that relieved them of their harshness and caused them to read much more smoothly.

"The principal thing discussed was the constitutionality of raising the dues to the State Grange, which was changed at the last State Grange from ten cents per quarter to twenty cents. One member, who made a vigorous speech in opposition to the raise, has a fine farm, elegant house and attractive surroundings. When the Master of the State Grange asked him if he did not belong to an Order to which he paid \$12 dues per year, he vanished as would the tallow-dip in the presence of the god of day.

"With the efficient assistance of Bro. Pixley, I proceeded to install the officers of San Joaquin Pomona Grange, No. 3. Bro. Overhiser welcomed the new Master, Bro. Elliott, to his chair, and as each one was installed and introduced, he or she made a neat and appropriate speech."

Their next meeting will be held at Stockton, the third Saturday in March at 10 A. M., and in the afternoon they will pay a fraternal visit to Stockton Grange.

A SPECIAL MEETING of the Executive Committee of the California State Grange is hereby called to meet at the office of the Secretary, 220 Market street, San Francisco, at one P. M. on Wednesday, the 4th day of April, for the transaction of such business as may be brought before it relating to the interests of the Order. The regular semi-annual meeting will be held on Friday, April 6, 1888.

THE PICNIC SEASON.—The picnics held by the P. of H. are not to be excelled by any other gatherings of the kind. Everybody likes them. They are almost invariably pleasant and beneficial to the Order and the community in which they are given. Let us hear from every Grange on this subject. Announce your time and place early.

BUTTE MOUNTAIN POMONA GRANGE starts very auspiciously, with 58 charter members from Sutter and Yuba counties. It was organized in November last, but the roll has only just been closed.

The Word Granger.

The word "granger" is by no means a new one, although the significance as adopted by the Order is somewhat changed. In an old work called Henry Best's Farming Book, published in England in 1641, occurs the following sentence: "His tenants, the graingers are tyed to come themselves and winde the wool; they have a fatte weather and a fatte lambe killed, and a dinner provided for their paines."

Old English names like Roger de la Grange, or Geoffrey de la Grange, or John le Granger, remind us that *grange* was also commonly used at one time for a farmstead, it being in reality nothing more than our *granary*.

Piers Plowman portrays the Good Samaritan thus:

"His wounds he washed,
Embawmed hym, and bound his head,
And led hym forth on 'Lyard'
To 'lex Christi' a graunge
Wel Sixe mile or sevene
Beside the newe market."

Fronting the "Trust" Bandits.

The Sutter Farmer speaks a stirring and timely word as to dealing with the "trust" robbers—as follows:

There is scarcely a commodity, especially if it approaches within hailing distance of a necessity, that has not been driven into a "corner" by combination or monopoly which sails under the new name of "trust." As a rose by any other name smells just as sweet, so a heartless monopoly by any other name grinds just as fine and bears just as hard as if sailing under its appropriate colors. This trust business has assumed such prodigious proportions as to engage the attention of the leading press of the country and of Congress, and we are forcibly reminded of the first years that succeeded the closing of the late war, when the business of the country was run in the interest of cliques and rings that had fastened themselves like leeches upon the Government and its industries. There was but one remedy, and the people were not long in finding it; organization had to be met with organization. It called into existence the Grange movement and the numberless organizations for economic purposes, among the farmers and the great middle classes. The onslaught was fierce and costly, but the result was never in doubt and ended in teaching the monopoly combinations that the people, when fairly aroused, were irresistible.

Congress may pass laws and send out investigating committees, but the remedy will be slow and uncertain unless the great industrial classes come together and combine their strength. The people must meet trust with trust, organization with organization, and agree to abstain from using an article that has been cornered, no matter what it is. Such resolutions promulgated and well observed will have more terrors for the monopolists than all the proposed legislation, for, be it remembered, that the millions made in these trusts have their influence on Congress and Legislatures. While the subject 25 years ago was new and the common people uneducated in such things and inexperienced in fighting organized capital and numbers, it educated them for the future, until they are quite capable to detect the wolf, though dressed in sheep's clothing or called by another name. The lion is not yet chained, and, knowing his strength, will refuse to be bound by monopoly fetters. Organization and a union of effort is the remedy, and we know of no other, but economy and self-denial are powerful aids.

Burial of Judge Russell.

The funeral of Joel Russell took place at Haywards on Thursday of last week. Flags at half-mast and heavily bordered with crape told of the people's sorrow, and the Congregational church was not large enough to accommodate those who gathered from near and far to testify their respect and affection for the departed.

The remains were taken to the church about 2 o'clock. The exercises were opened by Rev. W. W. Madge. Mr. Henderson, who had spent with Judge Russell the last day of his life, followed. Then came Rev. Mr. Morris of San Francisco, and finally Dr. R. H. McDonald. There was fine singing by Mmes. Kelsey and Hathaway, Misses Baxter, Cherry and Linekin, and Messrs. Baxter and Eby.

Among the many and beautiful floral tributes were a pillow, on which was inscribed "Rest," from Eden Grange, and a heart of white flowers, imbedded in violets, from the W. C. T. U. The funeral was in charge of Eucalyptus Lodge of Masons, of which the deceased was a member, and all appeared in their regalia. The pall-bearers were C. Winton, O. Deonis, H. W. Rice, H. Smyth, Mr. Henderson, Dr. R. H. McDonald, Rev. Mr. Morris, S. D. Warren—the first four Masons and the others Prohibitionists.

At the conclusion of the exercises, the long procession made its way to Lone Tree cemetery, a lovely burial-ground overlooking the valley, where the Worshipful Master, H. W. Meek, assisted by the officers and members of his Lodge, impressively performed the beautiful Masonic burial service.

The Canning Industry and Tin Plate.

A fortnight since we printed the petition, telegraphed by leading canners to the Congressmen from the Pacific Coast, that the latter use their best endeavors to have the duty on tin plate removed. Regarding this matter, the *Oregonian* well says: The tariff on tin plate (one and four-tenths cents per pound, equal to about 30 per cent) is one of many cases where the protective principle is applied where there is nothing to protect, and the result in reality is a limitation upon manufacture. There is no tin-plate industry worthy of the name in the United States, so the effect of the revenue is to add 30 per cent to the cost of tin, without any corresponding benefit whatever. The aggregate of this 30 per-cent increase is shown by the customs' reports to be about \$4,500,000 per year.

The magnitude of the tin-plate importation is due largely to the necessity American farmers, fruit-growers, fishermen, etc., are under of preserving their products. The canning industry provides a means whereby many articles perishable under ordinary methods of packing may be preserved permanently. It provides a means whereby producers of perishable products can reach distant markets and have the demand for the commodities that they have for sale extended through the 12 months of the year. This great canning industry, one of the most important in the country, affecting a wide range of dependent industries, is, in the aggregate, taxed to the extent of the tin-plate tariff to "protect" an industry which has no existence in fact, and only a poor chance of existence in the future. * * * It is hardly necessary to say that the millions which the Government annually derives from this source of revenue are altogether needless, since the Government has more money than it knows what to do with.

Congress ought, by all means, to put tin on the free list. By so doing it would cut \$4,500,000 from the revenue at a single stroke, save the consumers of the country a corresponding amount, and promote an industry whose benefits are universal.

WHOLESALE NEIGHBORS.—Did you ever notice, asks the *Pittsburg Stockman*, what a wonderful influence one good farmer in a township or valley has upon all the other farmers in the vicinity? Take, for example, a section where the land is naturally a little thin, where one generation after another have eked out a scanty living from the time of the first settlement, and let a good, systematic, energetic farmer settle on an average piece of land and begin stirring things up—first treating the soil as it should be treated, enriching it with fertilizers and rotation of crops—and see the effect. How naturally everybody falls into line, and at least imitates the example of the new-comer. Such a farmer is worth more to a neighborhood than all the old fogies that can be gotten together. It would not be a bad idea for those who have charge of the agricultural interests of the different States to place exemplary farmers in districts where the people are slow to make improvements, or to make the best of the advantages which naturally surround them. Such a scheme would certainly "rattle the dry bones" that are standing in the way of progress in many a community.

UNJUST DISCRIMINATION BY RAILROADS.—On the 23d of February the Inter-State Commerce Commission promulgated an elaborate opinion in the case of George H. Rice of Marietta, O., vs. several railroads, charging them, among other things, with discrimination in favor of the Standard Oil Company. The case of each defendant was considered separately, and in that of the Louisville & Nashville railroad an order was entered that the defendants cease unjust discrimination; that they cease to make tank-rates when tanks differ in capacity, and that they conform the charges on tank cars and barrel shipments to the rule that the tank is to be considered a part of the car itself, and for whatever is carried in it the charge ought to be the same by the hundred pounds as is made on the transportation of barrels of oil in carload lots in other cars. In the case of the Iron Mountain road the finding is that the defendant made excessive rates on barrel shipments, and an order was entered that its charges be made to conform to the rule.

New Freight Rates East.

The Transcontinental Association of Railways has issued its new schedule of rates. The rate on corn and beans to the Missouri river points is 60 cents per cental.

On live-stock rates the new tariff makes very material reduction in the carload schedule, though the rates on less than carload lots have been increased. The old rates to the Missouri river for horses and mules a carload was \$400; for cattle, \$300; hogs and sheep, \$280. The new rates are \$250, \$200, and \$170 respectively. Rates to the Mississippi river and Chicago common points are reduced in similar proportions.

Barley and malt, carloads, to Missouri river points, to St. Louis and common points, and Chicago and common points, all 60 cents per 100 pounds. The rate on canned goods, carloads, will be \$1 25 per 100 pounds to Missouri river, New York City, and all intermediates. Potatoes 80 cents per 100 pounds to Missouri river, St. Louis, and Chicago, continued, as is also rate on vegetables, carloads. Rate on wine in wood will be \$1 25 to all points.

Palm Valley—"The Land of the Afternoon."

Five miles south of the Southern Pacific railroad, and just east of Mt. San Jacinto, in San Diego county, lies one of the most remarkable valleys in California. The valley is quite limited in extent but almost unlimited in its productive capacity. It is really a "tropical valley" in which planting and harvesting can be carried on every month in the year. It is only within a few months that much attention has been drawn to this locality. It has been heretofore known chiefly by the small Indian reservation which has been for many years located upon it. The Indians have planted there several small patches of vines and a few fig trees and vegetables whose extraordinary growth and superior yield has brought to light the remarkable value of the soil which overlies this valley. The character of the climate is such as to bring forward all kinds of fruits and vegetables much earlier than they can be placed in the market from any other locality. This has been fully proven by the little that has already been done in that direction.

In regard to its soil, Prof. Hilgard of the State University writes as follows: "Commenting on the analysis made of your soil from Palm valley, I would say that the result is a surprise to me, as it is rare that a soil of so sandy a nature is so rich in the ingredients of plant food. In its contents of the primarily important mineral ingredients, it stands on a level with the best soils in the State, and if of sufficient depth it is hard to say what crop it would not be good for. It contains but an insignificant amount of alkali, and that of a bland nature; in so light a soil, moreover, even a larger amount would be of little consequence. Its moisture absorption is, however, quite light, so that if heavily cropped this soil will probably require plenty of water." Fortunately, the conditions of water are fully supplied, there being an abundance in the immediate vicinity obtainable from several sources—a plentiful supply for the present having already been brought upon the tract. The land requires but a trifling amount of labor to place it in perfect condition for convenient irrigation. The climate is all that could be expected for such a location. For fully eight months it is all that could be desired. During the balance of the year it is fully as agreeable as most of the notable health resorts in Southern California.

A strong company has been formed, with abundance of capital, which is under the management of liberal, intelligent and experienced men, to develop this locality. A large amount of land has already been sold to parties who are now making substantial improvements. The company itself is also engaged in improvements on a large scale. Arrangements have been made and the land is now being prepared to set out, in the immediate vicinity of the town-site, the largest orange orchard in the State, if not in the world. As already said, water has been brought to the tract in abundance. A railroad is now being constructed from the Southern Pacific, five miles distance directly through the center of the valley, by which travelers and visitors will soon have easy access. The company has already erected at Palm Springs station, at the junction of the branch with the main road, a building to accommodate persons going into the valley. Near the entrance to the valley there is a well-known medicinal spring which has long been used by the Indians, and which is now utilized by visitors, a very convenient hotel having been erected for that purpose by Dr. Massey. Religious services are also held here every Sabbath by a clergyman who has lately come into the valley on account of his health, and purchased a 30-acre tract of land.

At the upper end of the valley, where the canyon rises abruptly up the mountain-side, is found one of the most remarkable growths of fan and other palms known, perhaps, on the continent. The accompanying illustration has been made from a photograph taken in this grove. The entire grove numbers some five or six hundred trees, and it is said that nearly all the fan palms in other parts of the State originate from seed or otherwise from this growth of

fan palms. We shall have occasion hereafter to make further and more particular reference to the new and interesting locality of Palm Valley, which has been not inaptly styled "the land of the afternoon."

Fruit-Growers' Convention.

The Ninth State Convention of Fruit-Growers, to be held under the auspices of the State Board of Horticulture, will convene at Santa Barbara on Monday, April 9, 1888, and will continue in session four days. The Santa Barbara County Horticultural Society, the citizens of Santa Barbara and the members of the State Board cordially invite fruit-growers, and those interested in kindred pursuits, to be present at said convention and participate in its deliberations.

Every effort will be made to insure a large attendance, and it is to be hoped the meeting will be one of interest and profit to all.

An exhibition of fruits, etc., will be made by the people of Santa Barbara and vicinity. There will also be a grand flower show by the ladies of Santa Barbara, which will be free to all who will attend.

There will be an excursion to Ellwood, at which place will be conveyances to take the members to the head of "Ellwood canyon" and to the Beach Bluffs. They will also be shown the Cooper Olive-Oil Works, etc.

All those having new fruits, and inventions

In View of Fairs to Come.

As the stir of preparation for the district and county fairs of 1888 is already beginning to be heard, we throw out a few hints which have occurred to us from time to time as likely to promote the success of their management.

Referring to the awards at Marysville last autumn, the *Oroville Register* made some remarks which are worthy of serious consideration outside the 13th Agricultural District:

"The managers of the fair ought to revise their premium list and strike out about one-half of it another year. All those things that prove a good advertisement to the exhibitor, such as goods from stores, need no premium; a medal or a framed diploma would cost less, and prove of more lasting value than a small amount in coin. When a fair gives the same sum for an exhibit of silver-plated ware that it does for the best exhibit of citrus fruits, and when a larger premium is offered for an exhibit of boots and shoes than for the best exhibit of dried fruits, there is something wrong. Such things as citrus fruits, dried fruits, hams and bacon cured in the locality, etc., that are of interest to one-third the land-owners in the district and are certain to be of great and lasting value to many persons, should be fostered by large and valuable premiums, while those of little or no importance ought to be cut off without any. It

Meeting of the State Horticultural Society.

The regular February meeting was held at the rooms of the State Board of Horticulture, on Friday, the 24th. S. J. Stabler was called to the chair. There were present as visitors Prof. J. L. Budd of Iowa, Gen. Bidwell of Chico, Dr. C. C. Parry, the botanist, and others.

The Tariff on Fruits.

Letters from Pacific Coast representatives in Congress were read in response to copies of a memorial sent them by the secretary of the society. The memorial favored the maintenance of the present tariff on foreign fruits.

Congressman Morrow wrote: "I beg leave to say I am in favor of maintaining the present tariff, and if the opportunity presented I would even favor an increase on some of the articles. I believe in the principle of protection for the reason that it has proven to be beneficial to the best interests of the country. I will see that your resolutions are brought to the attention of Congress, and I am sure they will have some influence in showing the importance of the fruit industry in California."

Senator Dolph of Oregon wrote in response: "In any revision of the existing tariff laws, I shall endeavor, so far as possible, to protect all the important industries of the Pacific Coast; and shall be glad to co-operate with the California senators in the

matter referred to in the memorial."

Congressman Felton said he indorsed the resolutions heartily. "As you are aware," he continued, "I, being an old Californian, am somewhat conversant with the industries of our country, and consequently have my opinion as to what would be the effect of any change affecting their prices. As all of my interests, both material and personal, are centered in California and its people, it goes without saying that anything interesting to that State and people will have my earnest attention."

Congressman McKenna said that he favored all the politics urged. Senator Jones of Nevada said he was in thorough accord with the spirit and letter of this memorial, and promised his best efforts in favor of the California fruit-growers. Senator Stanford acknowledged the receipt of the memorial, and

promised to present it in the Senate. Senator Mitchell simply acknowledged receipt.

Discussion.

Work in the orchard being pressing at this season, the attendance at the meeting was small and the subject of fruit-shipping was postponed until the March shipping.

Prof. J. L. Budd, on invitation, gave an interesting talk on Russian fruit varieties and the possibility of some of them proving of much value in California. We expect to give the facts at another time. Prof. Budd's remarks led to a discussion, in which several took part.

Secretary Wickson announced with regret the death at his home, at Haywards, of Joel Russell, an old and honored member of the society. A committee, consisting of E. J. Wickson, Dr. E. Kimball and W. C. Blackwood, was appointed to take appropriate action in behalf of the society.

All members were urged to attend the next Fruit-growers' Convention, to begin at Santa Barbara April 9th.

ENOUGH TO FEED ALL BRITAIN.—Minnesota and Dakota, with 915,000 people in 1880, and, perhaps, 1,500,000 now, produced more wheat last year than Great Britain and Ireland with 35,000,000 people. The British islands comprise about 121,000 square miles, and devote to wheat growing only 2,400,000 acres, about one acre for 15 inhabitants. Minnesota and Dakota have about 6,000,000 acres of wheat, or about four acres for every inhabitant, and with a good yield could easily sell for export as much as Great Britain and Ireland produce. Yet the British crop this year is considered a good one, notwithstanding the hot drought, which reduced the yield to about 30 bushels to the acre. With thorough farming, the lands now cultivated for wheat in Dakota and Minnesota would supply nearly as much as the entire population of the British islands consume. —*London Economist*.

FAN PALM GROVE AT THE ENTRANCE TO PALM VALLEY, SAN DIEGO COUNTY.

of value to horticulturists, are requested to exhibit them at this meeting.

At the opening of the convention a committee will be appointed who will, just before adjournment of every day's session, report the business and program for the following day.

A great many very valuable papers on horticulture, etc., by the most prominent horticulturists of the State, will be presented, and it is expected that this meeting will be the largest and best ever held in the State.

ELLWOOD COOPER, President.

B. M. LELONG, Secretary.

Warts on Horses.

Mr. E. H. Rodman of Stockton, seeing the inquiry of D. T. Hall in regard to granulations in the ear of his mare, writes us that if it is only warts fresh laid will take them off. About two years ago a horse which he was taking care of for Geo. A. McKenzie had one wart on his neck, another on his side where the harness seemed to chafe it and make it bleed whenever the horse was used, and two more about the flank. The one on his side was about the size of a walnut. Mrs. McKenzie having seen in a paper that fresh lard would remove the warts, Mr. R. obtained some leaf lard, tried it out and used it on the warts but a short time before they disappeared, leaving a bare place on the side. These places, however, are now all covered with hair, and one could hardly tell where the warts had been.

THE USE OF VINEGAR.—Experiments have shown that even so small a quantity of vinegar as one part in 5000 appreciably diminishes the action of saliva upon starch. One part in 1000 renders it very slow, and twice the latter quantity arrests it altogether. From this it is evident, says our cotemporary, that vinegar pickles, salads and other preparations in which vinegar is used are unwholesome, especially when taken with farinaceous food, such as bread and other preparations.

would be a good plan, instead of giving everybody premiums, to make some real competition by giving premiums only to the most deserving."

Recognizing the committee's need of courage, and even sternness, in resisting the good-natured inclination to give all sorts of premiums and please everybody, we heartily indorse the above doctrine. To award \$5 for an embroidered quilt, \$2 50 for a juvenile "charm string," and merely "honorable mention" to a fine exhibit of raisins, does not tend to encourage important industries.

Again, a dozen substantial premiums accomplish more than a hundred trivial ones. Exhibitors are striving for the honor quite as much as for the money. If each one gets a premium, the foremost gains but little by his excellence. Cut down the number of prizes and increase their value—that will provoke competition.

We have in former years remarked upon the lack of judgment shown in offering such disproportionate sums in purses for fast horses to the neglect and belittling of the more legitimate agricultural interests.

The result of recent Eastern experiments in cutting down the appropriations for the speed-ring, and augmenting those for the premium-list proper, has only gone to strengthen our conviction that racing, not to say gambling, is not necessary to the successful conduct of agricultural fairs.

Add to these improvements the utter exclusion from the grounds of pool-sellers and whisky-venders, and comparative perfection would be at hand.

SHORTHORN SALE.—Offerings of cattle by auction continue. Our advertising columns contain another announcement by Killip & Co., of 50 head of purebred Shorthorns, bulls, cows and heifers of popular families, the property of Joseph Combs of Missouri. These cattle are described as superior, and the offering will no doubt attract much attention.

The Whisperer.

If we bid thee dwell apart,
Tending some ideal smart;
In a sick and coward heart;

In self-worship wrapped alone,
Dreaming thy poor griefs are grown
More than other men have known;

Dwelling in some cloudy sphere,
Though God's work is waiting here,
And God deigneth to be near;

If he bid thee bow before
Crowned mind, and nothing more,
The great idol men adore;

Though his words seem true and wise,
Soul, I say to thee, Arise,
He is a Demon in disguise!

—Adelaide A. Procter.

A Queer Race.

Our host was a genial, generous-hearted American, passionately fond of horses and all appertaining to them, attending most meetings during the season, and breeding a little in an amateur way at his country-house, where we were then located.

He had one fault which constantly drove his wife and pretty daughter to the verge of distraction; that was, he could not be an hour in any man's company who chanced to interest him on any subject whatever, without giving that individual a cordial invitation to his house for the annual house party in the fall. This naturally brought a discordant element into the circle at times.

Last fall the disturbing atom was a Colonel Ford—not a bad sort of fellow in himself, perhaps, but one decidedly out of place in the society that surrounded him just then.

No matter what the subject under discussion was, he always had an opinion upon it; a very decided, egotistical opinion, delivered in a blatant tone with a domineering air.

In course of time I discovered I had a firm friend and a kindred spirit in my dislike to the colonel, in my host's pretty daughter, Miss Jennie, a thorough American girl, full of fun and mischief, and quite capable of carrying out any scheme that might enter into her curly little head.

When Colonel Ford made his appearance at Valley House he was surprised to find a well-fitted training stable and all the paraphernalia pertaining to an expensive hobby carried out to the full by a wealthy man. The very first night he arrived the Colonel had telegraphed for his groom to bring along "Verdant," and from that time he never ceased boring us to death about his mare. The mare was certainly a fine piece of horseflesh and had performed very creditably in public; but surely that was no excuse for her owner forever badgering every one to make a match with him.

One day at dinner, to which I had the good fortune to escort Miss Jennie, the conversation turned upon a very fast colt belonging to a friend of mine living a few hundred miles north of Valley House. I had just concluded my remarks when Colonel Ford burst out:

"I tell you I'll back my bay mare 'Verdant' any distance under a mile and a half for \$1000 against any living quadruped in this State."

I looked across at him rather indignantly, not desiring any wager upon the matter, when Miss Jennie chirruped: "Is that so, Colonel? What about weights?"

"My dear young lady, catch weights, of course. Have you a match to propose? if so, I would be delighted!"

Miss Jennie laughed saucily, looked at me, and, giving me a slight tap with her foot under the table, said:

"I leave my case in your hands. I want to match my pig 'Peek-a-boo' against the Colonel's 'Verdant,' distance three hundred yards, to be run two weeks from to day."

Of course the table roared with merriment, the Colonel turned first crimson and then white with rage, tried to laugh, but could not, and finally said:

"Very funny, Miss Jennie, very funny indeed."

During the merriment Miss Jennie whispered a few words to me, and I said:

"I do not see anything funny, Colonel; you offered repeatedly to back 'Verdant' against anything in the State; Miss Jennie takes you up, and I am empowered by her to draw up articles of agreement and deposit the \$1000 in any one's hands you may suggest."

The Colonel was staggered for a moment, but recovered himself and said:

"Well, if it is serious let her go. I appoint Tom Carswell, here, for holder, and will increase it to \$5000 if you or any one want to go the limit."

Our host jumped into the pool: "I'll take \$1000."

Carswell said: "I guess my thousand is as good as another's."

George Hoyland took another, and I increased

mine to \$2000. Articles were drawn up, signed, and for the next few days every one was trying to find out what Miss Jennie and I were after with that pig.

Notwithstanding the rigid surveillance we were subjected to, we succeeded in keeping our secret, and every morning at daybreak a tap would come at my door, and, dressing quickly, I would find a cup of coffee and Miss Jennie awaiting me downstairs.

"Peek-a-boo" was one of those long, lank, hungry, scrub porkers that can run like the wind when they like. We fed him once a day on a bushel of corn; he was placed in a crate with a sliding-door of bars, he saw the corn dumped into a trough, and was then carted, hungry and squealing, to the 300-yard limit. Here the word "go" was shouted, the door opened, and piggy went down the homestretch like a flash of porcine lightning.

Even the first day he went straight along without an error; and after a spell of 12 days he was a phenomenon; say "go," open the door, and away he would start; commence pouring the corn into the trough as he came nearer, and he spurted in the last 50 yards like a professional pedestrian. Then he was taken back to his sty, and by the time the household awoke to the duties and pleasures of the day, Miss Jennie and I would be completing our toilettes a little later than the rest.

Greatly to the Colonel's annoyance, some one put a prominent advertisement of the race into the papers, and friends from far and near came round to see the fun. House and grounds were thrown open to the public, and the place was thronged with eager people to see Miss Jennie's roan porker "Peek-a-boo" meet the colonel's bay mare "Verdant."

At 6 o'clock P. M. the saddling bell rang out; ladies began to group on the grand stand specially erected for the occasion. Again the bell, and "Verdant" came out looking like a picture. She took a short canter past the stand, and then turning, passed it again, going to the starting-post. As she neared the post, "Peek-a-boo" was carried out in his pen, squealing lustily as usual, and I noticed the mare lay her ears back and kick somewhat viciously, as if the music did not suit her.

"Oh, ho!" I thought, "here's a new development."

The starter asked if we were ready. I looked up the course and saw the man with the corn in his arms at the trough. I took hold of the trap-door and nodded; the flag fell, "Go," I thundered. "Peek-a-boo" shot out with a demoniacal squeal, darted in among the mare's legs. "Verdant" reared, nearly falling backward, turned round once, and shot off like a rocket to find "Peek-a-boo" beat her on her merits, literally outrunning her, and was munching his corn contentedly when she came up.

The Colonel swore dreadfully. We offered to repeat the wager, but he was "froze out." We won the \$5000, and the Colonel made an excuse and left the Valley House two days later.

"Peek-a-boo" hereafter is to live in clover. He is to feed on the fat of the land and die a natural death, his placid porcine temperament never to be troubled by fear of butcher or shambles; for him the horrible knife and scalding-tub will hold no terrors. He will see his brothers led out to slaughter and will live along to a good old age, with the promise from his fair mistress that when he dies his head will be stuffed and mounted as the finest hog in Iowa.

Happy pig!

And Miss Jennie?

Ah! dear reader, it is a most prosaic ending. Miss Jennie was happily married this spring, and my share of the plunder went toward buying her wedding present. She had noticed the strange dislike "Verdant" had to pigs one day when the mare was leaving the stable for exercise, and on that knowledge took up the Colonel's bombastic wager by challenging him to run the mare in "a queer race."

THE PANTHER GAVE WAY.—In the mountains, about 30 miles southeast of San Jacinto, lives Quitman Reed. A little while ago all the household were down with measles except Miss Mamie Travis, an Ohio girl of 17 years, who had occasion, the *Register* says, to go about a mile from the house to where Mr. Reed had a horse staked out. When half-way there, at a bend in the trail, she came face to face with a mountain lion. The beast was as much surprised as she, and for a moment they stood gazing at each other. The girl, with her hair standing on end and her heart beating like a trip-hammer, was debating with herself whether to turn and fly for the house or try to climb a tree; but the latter seemed too difficult. They stood and glared at each other for a few seconds, which to the young lady seemed like hours, the lion crouching on the ground, his tail mopping the earth, and keeping up all the while a low growl that sounded like a freight-train in the distance. It was growing monotonous. The girl, never taking her eye off the lion, reached down, picked up a medium-sized stone, and, with all the strength she could muster, threw it at the beast. This was indeed a surprise to the animal, and, instead of springing forward as was expected, he gave a loud growl and disappeared in the brush. The brave young lady, instead of turning back to the house after the lion had disappeared, continued on her journey a half mile further to where the horse was picketed and returned with the animal to the house, where she related her thrilling experience with the wild beast.

The Other Side.

EDITORS PRESS:—I noticed in your paper of last week that some one had sent you Mrs. Corbin's letter to Senator Blair, with its remonstrance against woman suffrage.

I forward you by this mail the *Woman's Journal* for January 28th, containing an answer to this letter, believing it will be of interest to many of your readers, who like myself can see no reason why expressing our convictions, by dropping a slip of paper into a box, should be more hurtful to ourselves and the race in general than to stand by with aching hearts and helpless hands, while drunkards and quondam convicts vote to legalize the dramshop and dens of vice for the physical and moral death of our youth.

If we saw our sons burning to death in some terrible fire and made no effort to save, we would be called inhuman. But when we see them daily being drawn to their ruin and beg to have our hands untied that we may draw them from the fire, we are told to return to our homes to cook and sew—that these (and raising more sons for destruction) are women's sole duties in life. As one of many women, I thank you for what you are doing for the sex—aye! for the race. N. B. D.

Suisun, Feb. 21, 1888.

The following is the article from the *Woman's Journal* to which our correspondent alludes:

Mrs. Caroline F. Corbin of Chicago published a few years ago a pamphlet against equal rights for women. It was entitled "Letters from a Chimney Corner." The same lady has now issued an "Open Letter to Senator Blair," in which she takes him to task, not in the gentlest manner, for advocating the extension of suffrage to women.

Mrs. Corbin says that marriage is a partnership, and that "the question is whether each partner shall keep to that line of labor which nature has marked out." This is begging the question at the start. The precise point at issue is whether there is anything contrary to nature in a woman's dropping a slip of paper into a box, or any incompatibility between rearing a family properly and taking an intelligent interest in public questions. The advocates of woman suffrage believe that the two things could and should go together. The best wife and mother is the one who can be an intelligent companion to her husband and a broad-minded teacher to her children.

It has been said to be impossible to find any new argument for or against woman suffrage; but Mrs. Corbin has found one that is both new and extraordinary. She represents that since men cannot be the mothers or nurses of children, therefore, unless they are required to do all the voting to represent both themselves and the other half of the human race, men will be simply drones in the human hive. She says:

"If men are not capable of managing the affairs of the State according to the highest and best ideas of the race—that is, of both men and women—will you permit me respectfully to inquire what proper and adequate share of this world's work they can perform? What is their natural place in the order of society? Are they mere hewers of wood and drawers of water? They cannot bear citizens; they cannot care for them in infancy and rear them to manhood. If they cannot govern them with wisdom and justice when they are produced ready-made to their hands, what is their reason for being?"

And she adds somewhat tartly:

"When a man stands up in the United States Senate and makes such a statement as that in regard to the men of this Republic, it appears to me that he compromises his own self-respect and the respect due to the dignified and honorable body to which he has been elevated."

When men conduct business and commerce, are the bread-winners, as a rule, and do half the voting, they may reasonably be thought to take their share of the world's works, even though they cannot, as men alone, contribute to the Government "the highest and best ideas of both men and women." To say that they cannot do this is no more a slur upon their mental and moral capacity than it would be a slur upon their musical capacity to say that they cannot contribute to a chorus the soprano as well as the bass. As a well-known advocate of woman suffrage has said:

"The eternal and ineradicable distinction of sex is one principal reason why women, in a representative government, should be directly represented. If lawyers alone cannot safely be trusted to make laws for mechanics; if merchants alone cannot legislate for farmers; if white men alone cannot do justice to the negroes; if every well-defined class in society is entitled to its own authoritative expression through the ballot, surely women, who are the wives and sisters and mothers of men, should give expression to the domestic interests from the feminine point of view. If a blacksmith cannot fairly represent a physician, how much less can a man represent a woman!"

As a matter of experience, it is exactly these domestic interests, the interests of the home, that we find habitually neglected by purely masculine legislation.

Mrs. Corbin says that "if women vote they must hold office." She seems to imply that all women must hold office, whether they will or no; whereas not one voter in a hundred ever holds office, and no one is obliged to take office against his will. Mrs. Corbin points out that it would be inconvenient for the mother of a young family to go to Congress. Undoubtedly. The mother of a young family would not be likely to be asked to go to Congress, and would not be likely to consent if she were asked. But she might have a very definite idea as to the sort of a man she wanted to send to Congress

to represent her and her children, and there is no reason why her opinion should not be counted along with those of her husband, father and brother. Many men are occupied with engrossing business cares which would make it inconvenient for them to go to Congress, and they do not go; but they do not lose their votes on that account. House-mothers would simply belong in the same category.

Mrs. Corbin says that woman suffrage will increase the number of unmarried women. Yet in the Eastern States, where women cannot vote, spinsters abound; and in the Western Territories, where they have been voting for years, unmarried women are as rare as white blackbirds. Woman suffrage may not especially promote matrimony, but it plainly does not hinder it.

We are often assured that women have no natural taste for politics, and that the more sensible a woman is the more averse she is to taking any part in them. Yet Mrs. Corbin expresses the fear that "many, and those not of the weak and ignorant, but of the most gifted and intellectual, will be tempted to forego marriage and motherhood" for the sake of an unimpeded political career. Kilkenny arguments again! If women are naturally averse to politics, it is not likely that many will plunge into them to the exclusion of all other interests; and in any case, nature may be trusted to look out for herself. Girls who are in love would not generally refuse to marry because of the remote chance that one in a thousand of them might some day receive a nomination to Congress and be obliged to decline it on account of family cares.

Mrs. Corbin says:

"The direct tendency of woman suffrage would be to form such a class of women as held high court in Greece in the days preceding its downfall.... Are American men prepared to relegate the wives and mothers of this Republic to a secondary and subservient place, and share the political leadership of this great and free country with an oligarchy of Aspasias?"

It is the advocates of woman suffrage, by the way, who object to having the wives and mothers of the Republic "relegated to a secondary and subservient place," and classed politically with children, idiots and criminals. But, seriously, woman suffrage is the last thing that would conduce to a reign of Aspasias; and it is hard to see how any sensible person can entertain such an idea. The great majority of women are not bad, but good, and good women are not famous for liking bad ones. The idea that the mass of American wives and mothers would either elect bad women to office, or suffer them to be elected, is almost too absurd for serious discussion.

It must be remembered, also, that at the time when courtesans "held high court" at Athens, good women were strictly secluded and kept in ignorance. The only way in which a woman could gain any freedom or any education was by breaking entirely with the proprieties. It is a system like that, not the system of equal rights, that puts a premium on vice. In countries where women have most freedom and most education, they are generally most virtuous. Give a woman a legitimate means of influencing politics and she is the less likely to have recourse to an illegitimate one.

In closing her article, Mrs. Corbin says that "there are other and weightier arguments against woman suffrage" than those she has mentioned. They should be weightier ones, indeed, to justify the denial of suffrage. As Mary Stuart said when her rebel barons offered to pledge their word and honor for her safety, "These are too slight and unsolid; add at least a handful of thistledown to give them weight in the balance!" A. S. B.

Heroic Little Cripples.

The burning of the New York hospital for crippled children, terrible as it was and lamentable for the life lost, has furnished a chapter in the heroism of children which their elders may study with profit.

The spectacle of one little boy, wan and crippled by hip disease, taking a paralyzed companion in his arms and carrying him to safety, and of a little girl, who, after sounding the alarm of fire, went from safety back to the danger in which her bed-ridden mate lay helpless, and "joined hands" to meet death together, must inspire the dullest pulses to a keener and kindlier beat.

Great disasters and resulting panics are unfortunately not rare, but none has ever furnished, among adults, so many examples of presence of mind and unselfish thoughtfulness as others as that which suddenly summoned the exhibition of these qualities among the sick and crippled children in the burning hospital.

It would be a bad world that was not moved in all its ranks by the story. The little heroes have builded better than they knew, for they have drawn attention to the soldier that is in the souls sheltered by the distorted and paralyzed bodies of the little ones whom God has compensated for lack of physical symmetry, in abounding beauty of the spirit.

Henceforth no call will rouse the charitable to such good giving as that made in behalf of others who have with these little ones a common endowment of weakness and misfortune. And upon the lintel of every door behind which they are safely sheltered will be the ineffable inscription of God's blessing upon these weakest of His creatures who have wrought the mightiest for the forlorn and the stricken.—*ANA.*

Control Your Temper.

[Written for the RURAL PRESS by ENGLISH WOMAN.]

Some people say our tempers are not in our own power; we are made with different dispositions, and if mine is not amiable it is more my misfortune than my fault. This is wrong, for we all have the power to correct ourselves if we will. It is true we have got all equally happy dispositions, but virtue consists in cultivating every good inclination and correcting every evil. If you are born with a bad temper you can certainly improve it with education and reason, and if you have a good one while young do not suppose you will always be able to keep it without great care and attention. There are three kinds of temper—the passionate, peevish, and obstinate. Some people are even subject to all three by turns. With regard to the first, it is so odious, especially in a woman, that one would think shame alone would be enough to keep her from it; it is as bad as intoxication, and she ought to be as much ashamed of one as the other, for a woman in a passion is a disgusting sight. It is a fact that passionate people can control themselves, and do, when they are in the company of those they fear or wish to please, and they know it will not justify them to say they were in a passion, because it is an insolence to even speak when we are in a passion. Therefore, when you find your passion rising, either be silent or leave the room, for you are neither fit to reason nor listen to reason; use yourself to disappoint your anger, and you will soon find it will be so weak that you can manage it completely. Some one once said the only way to be angry and sin not is to be angry at nothing but sin; and sure it is, there is a noble and generous kind of anger, a proper and necessary part of our natures in which there is nothing degrading. Peevishness is still more degrading than passion, and will destroy more happiness, for it shows itself more frequently than passion and disgusts us more if possible, because it shows a low and little mind that indulges in self-love. Sullenness is perhaps the worst form of temper, for it may end in melancholy, revenge and even insanity. Some people believe it is the strongest minded in the house who gets her own way. I think it oftener requires a stronger will to give in, or at least the person who does so has a stronger power over her will and temper than she who gets her way. I think temper destroys more happiness than anything in the world, and it is as much a woman's duty to govern her temper as it is her house; in fact, she cannot govern the latter unless she has a perfect control over the former.

Reading for Rest.

Nothing is more restful to the mind than a wisely selected work of travels, description, or a judiciously chosen romance. The romances most common are too weak and their wit sinks too near to the line of silliness to offer much repose to a person familiar with the best writers, and the effect of such productions is to deprave the taste or to excite irritation. A restful book to a tired brain must produce in the mind of the reader a sense of satisfaction with moderate stimulus. A tame moral essay, a story in which all behave well, go to sleep every night at nine and rise every morning at five to listen to the birds sing, will not suffice; and, on the other hand, a narrative that requires the closest analysis and which appears to be constructed upon the principle of leaving the readers in doubt as to the character of the heroes, is but a piece of intellectual dissection in disguise, and would better be read for work than for rest.

Everything that relates to history, science, philosophy and the deeper studies of human nature should be handled as work. Yet nature rewards the worker by making in the end what at first was difficult a charm to him; so that the specialist must be upon his guard lest he neglect the work of reading what he knows he needs for the more congenial occupation of reading what to others would be work, but to him has become pleasure. The life of Charles Darwin, just published, shows that he brought on a practical "atrophy of the brain," utterly changed his tastes, and became the slave of lines of association to which he had surrendered himself wholly.

What is work for one person may be rest for another; and it is equally important to consider that what may be work for a person at one time may be rest at another. Newspapers require no work, and he who reads them exclusively will in a few years be unable to do intellectual work. Many books of a literary character require little or no work. Books made to sell belong generally to the class that can be read as fast as the eye can discern the letters. Every person should select his standard authors without regard to their popularity. It is rare that a really good book to be mastered by work has a large sale. Restful books from their very nature may become popular, except among those who make utility their god and restrict the definition of utility to what can be turned to practical use, or has a technical or commercial value, and those whose intellects are so small, and sensibilities so abnormally large, that they need exhausting excitement to hallucinate them into the belief that they are happy.—Rev. J. M. Buckley in the *Chautauquan*.

GERMAN MILLERS.—It is stated that 743,881 persons are employed in the food-producing industries of Germany, and of this number 118,000 are described as millers.

YOUNG FOLKS' COLUMN.

Aunt Susie's Piece-Box.

[Written for the RURAL PRESS.]

DEAR GIRLS OF THE RURAL:—Some of you surely must be old enough to do, or at least help with, the weekly mending which comes, "rain or shine," to every family, and I want to tell you about the piece-box I made for myself that saves me much time.

I was brought up to "have a place for everything, and everything in its place," and the love of order impressed upon me when a young girl has followed me through life, and when I was crowded for room to keep my pieces for mending, cut-out work, patterns, etc., I called my "woman's wit" to my aid and invented a "piece-box," which I will describe to you. I bought an empty cracker-box of my grocer for 20 cents, five yards of dark calico, and five yards of cretonne, dark ground with roses and leaves. I covered the inside of the box smoothly with calico on the bottom, then took a piece large and long enough for the sides and ends, and near the top of this I basted on a strip about nine inches wide which I had hemmed on the machine; this I made into pockets by putting a box-pleat for each one, so there would be room for it to give at the bottom where I stitched it. Then I put on a narrow band to divide the pockets—some are large, some small—and I measured so they would come right at the corners. This I fastened to the box with tacks and didn't pound my fingers once! The cover I lined inside with calico, and took a double piece, stitched together about two inches wide, and tacked it on with rather small tacks in loops, some larger than others. I made two rows of these loops. The outside of box and lid I covered with cretonne, put some straw on the cover first with a piece of strong cloth firmly tacked on to hold it in place; then I had leather hinges nailed on and put a box-pleating around the edge of cover. I put on a strap to open it by, and one on each side to lift it by on sweeping days. I cut my patterns over out of light-brown paper, folded them neatly, and marked each one and slipped them in the loops on the inside of cover, and also some small rolls of pieces; then sorted my buttons, tapes, etc., and soon had all the pockets full, and in the bottom of the box I keep larger rolls of pieces, garments to be mended, and cut-out work, and I can sit by this box and do a good deal of sewing in the time it would take to hunt through piece-bags, and go here and there for what I might need.

Now, girls, I am sure your mothers will let you have a box like this, and if you have a big brother get on the good side of him and then he will fix the hinges and straps for you, and perhaps even tack on the pleating. If a cracker-box is larger than you need, take a smaller one, and make it as gay and pretty as your taste and purse allow, and then see how much mending you can do, and so give your mothers a little extra time for rest or reading.

Mend neatly. Turn square corners to the patches, and see that they go the right way of the cloth. Sew the buttons on firmly and wind them well, then the boys won't be forever coming to get a button sewed on, and won't have a chance to say "girls can't do much, any way." You know boys think they belong to the "Lords of Creation," and are inclined to snub their sisters if a chance offers.

Have a wooden ball or china egg to mend the stockings on, and do it neatly, making basket work of your crossed threads till the "gaping wound" is filled in, and run the thin places, especially to the boys' stockings, as somehow their heels and toes have a most dreadful way of coming through.

I am sure you will take more comfort in sewing and accomplish more if you make a piece-box, and wishing you all success with it and with your sewing, believe me to be your loving

AUNT SUSIE.

Arctic Flora.

The polar flowers seldom have any perfume, and the few that exhibit this delightful quality, however feeble, are, I think, from that class that have crept over the cold border marked by the Arctic circle; or, in short, none of the 50 mentioned—Eskimo flowers, we might call them in a popular way—have any appreciable odor.

The colors of these boreal blossoms are generally of the cold tints, as if in harmony with the chilly surroundings, instead of the warm hues that would break in upon the desolation with double effect by sheer contrast where so few cheering sights are to be seen. White and light yellow predominate, and these color-seem associated with frosts and cold weather, for it appears that those flowers we call "everlastings," and which are the longest to defy the dippings of the coming winter weather, are mostly tinted like the northern snows and yellow northern lights.

It is in the depths of old ocean that we find some of the largest expressions of plant life in the polar zone. Here, within a short distance of shore, are colossal kelps and other life that grow throughout the year; of course, vegetating the most in the short summer months.

Land plants, as already stated, are pigmies compared with those of the sea, or even the corresponding class in lower latitudes, and this dwarfed condition, a naturalist tells us, is not

due so much to the intense cold in the Arctic winter as to the fact that they do not get enough warmth in summer to develop them perfectly. Dr. Joseph Hooker mentions it as a rare property of one of the graminæ (the grasses), *Trisetum Subspicatum*, that it is the only Polar species known which is equally an inhabitant of the Arctic and Antarctic regions.—From "Flowers of the Snow," by Fred'k Schwatka, in "Woman," January.

GOOD HEALTH.

Celery as Food and Medicine.

Numerous cures of rheumatism by the use of celery have recently been announced in English papers; but the following, more in detail, is given on the authority of the *New York Times*:—"New discoveries—or what claim to be discoveries—of the healing virtues of plants are continually being made. One of the latest is that celery is a cure for rheumatism; indeed it is asserted that the disease is impossible if the vegetable be cooked and freely eaten. The fact that it is always put on the table raw, prevents its therapeutic powers from being known. The celery should be cut into bits, boiled in water until soft, and the water drunk by the patient. Put new milk, with a little flour and nutmeg, into a saucepan with the boiled celery, serve it warm with pieces of toast, eat it with potatoes and the painful ailment will soon yield. Such is the declaration of a physician who has again and again tried the experiment, and with uniform success. He adds that cold or damp never produces but simply develops the disease, of which acid blood is the primary and sustaining cause, and that while the blood is alkaline there can be neither rheumatism nor gout. English statistics show that in one year (1876) 2640 persons died of rheumatism, and every case, it is claimed, might have been cured or prevented by adoption of the remedy mentioned. At least two-thirds of the cases named heart disease are ascribed to rheumatism and its agonizing ally, gout. Smallpox, so much dreaded, is not half so destructive as rheumatism, which, it is maintained by many physicians, can be prevented by obeying nature's laws in diet. But if you have incurred it, boiled celery is pronounced unhesitatingly to be a specific."

The proper way to eat celery is to have it cooked as a vegetable after the manner above described. The writer makes constant use of it in this way. Try it once and you would sooner do without any vegetable, with the single exception of the potato, rather than celery. Cooked celery is a delicious dish for the table, and the most conducive to health of any vegetable which can be mentioned.

A CIGARETTE VICTIM.—The *Fresno Republican* mentions a case of cigarette poisoning reported to that paper by a physician. The facts are vouched for as such, and names only are suppressed. The report is as follows: Some days ago the physician mentioned was called to the bedside of a young man about 17 years of age, who was apparently suffering from a disease that differed in all its symptoms from anything the doctor had ever met with in his practice. He learned, however, that the lad was an inveterate cigarette-smoker, and realizing that he was a victim of that habit, began at once to combat the results of the poison instilled into the system by cigarettes. Day by day the young man grew worse, and paralysis was plainly noticeable, as it attacked one set of nerves after another. His sufferings were horrible to witness, but all the physician's skill was unable to successfully cope with the poison with which his system was saturated. Finally he died, a splendid specimen of physical manhood, every organ healthy, killed by cigarettes. There was absolutely nothing else the matter with the boy, and ordinarily he should have lived to a good old age. This is a true statement of the case, and not overdrawn in any particular, and should be a warning to every young man. Cigarette-smoking means certain death if indulged in to any extent by young people.

RUSSIAN SANITATION.—There seems to be a great neglect of public health in Russia. In an aggregate population of 100,000,000, according to Dr. Bubnoff, there are only about 5000 medical men, while no working sanitary system can be said to exist in the empire. In some districts the death rate ranges from 60 to 80 per 1000, and in spite of a high birth rate the population of the country is increasing only at the rate of one per cent. That a frightful penalty in human lives is paid for neglect of public health is shown by the fact that of the total of some 2,800,000 yearly deaths, something like 1,000,000 may fairly be traced to preventable causes.

THE DYSPEPTIC'S IDEAL.—A medical man mentions that like his father and paternal grandfather, he always had the power of voluntarily ejecting food or fluid from the stomach at any time. When troubled with acidity or nausea, the stomach is emptied at will without the slightest difficulty, and may be washed out with several glasses of water. At college this faculty was used for gain, large doses of narcotic poisons being swallowed for wagers, and afterward immediately expelled. An investigation is suggested to determine the cause of this gift, or what voluntary muscles account for it.

DOMESTIC ECONOMY.

Orange Cake.

EDITORS PRESS:—In answer to Mrs. Bucknall's request I send the following recipes taken from the *Ladies' Home Journal*, and tested. Three cups sugar, three-quarters cup butter, one cup sweet milk, four cups flour, five eggs, juice and a little grated rind of one orange. Break the yolks of eggs in a large bowl, add the sugar, butter and orange juice and beat till light and creamy; then add the milk, the whites of the eggs beaten to a stiff froth, and the flour into which has been sifted one teaspoon of soda and two of cream of tartar. Bake in four deep jelly-cake tins. Going to go between the layers and on top: White of one egg, one cup of granulated sugar, juice of one orange. Put the sugar on the stove with just enough water to moisten it. (If you put too much the icing will be thin and run.) Let this boil till it is clear and will spin a thread. Have the white of egg beaten light; then let some one drip the sugar while you beat, and continue beating till it is thick and white; stir in the orange juice; if it thins too much, add pulverized sugar till it is thick enough. This makes a very large and delicious cake. I. H. Danville, Cal.

PUFF PASTE.—Put one pound of flour on your pastry slab, make a hole in the center, in which put the yolk of one egg and the juice of a lemon, with a pinch of salt; mix it with cold water (iced in summer if convenient) into a softish, flexible paste; with the right hand dry it off a little with flour until you have well cleared the paste from the slab, but do not work it more than you can possibly help; let remain two minutes upon the slab, then have a pound of fresh butter from which you have squeezed all the buttermilk out in a cloth, bringing it to the same consistency as the paste, upon which place it; press it out with the hand, then fold over the edges of the paste so as to hide the butter, and roll it with a rolling-pin to the thickness of a quarter of an inch, thus making it about two feet in length; fold over one-third, over which pass the rolling-pin; then fold over the other third, thus forming a square, place it with the ends top and bottom before you, shaking a little flour both under and over, and repeat the rolls and turns twice again as before; flour a baking-sheet, upon which lay it upon ice or in some cool place (in summer it would be almost impossible to make this paste well without ice) for half an hour. Then roll out twice more, turning it as before, place again upon the ice a quarter of an hour, give it two more rolls, making seven in all, and it is ready for use when required, rolling it whatever thickness according to what you intend making. Upward of a hundred different kinds of cakes may be made from this paste.

APPLE FRITTERS.—Mix one pound of flour with half a pint of milk or water, then half a pound of butter melted in a stewpan; mix well together with a wooden spoon very smooth. Thin it a little with water, whip the whites of three eggs very stiff, stir it gently; have six apples peeled, cut in slices about a quarter of an inch thick, the cores taken out with a cutter; dip each piece in the batter, and fry in hot lard about six minutes; to fry well, the fat should not be too hot at first, but get hotter as it proceeds. They should be crisp, and of a nice golden color. Serve on a napkin, and sift sugar over them.

SPANISH CREAM.—Take half a box of gelatine, over with water, and let stand about half an hour. Take one quart of milk and let it boil up once or twice. Beat five eggs very light, and add sufficient sugar to sweeten them, and mix well together. Add the melted gelatine to the boiling milk, and when perfectly dissolved pour it upon the sugar and eggs. Return it to the fire for a few minutes, stirring all the time. Season with vanilla and pour into molds. Serve with cream.

DOUGHNUTS.—One pint of milk, one-half cup shortening, half butter, half lard, two cups sugar, one-half cup potato yeast, two eggs, flour for a batter; mix at noon; after supper, or when light, stir in flour until the spoon will stand alone; in the morning turn out on the moldin' board, mold enough to cut in shape, and let rise again. Have the fat smoking hot, and the doughnuts light enough to stay on the top of the fat, not go to the bottom of kettle.

WHITE BEAN SOUP.—Soak one quart of beans over night, drain off the water, put the beans in a stock pot with one carrot, one onion, one tablespoonful of prepared seasoning, three quarts of water. Let them simmer four hours, then strain through a colander, stirring it over the stove, and remove the scum while boiling. When finished, add a pat of good butter, a little sugar and a little chopped parsley. Serve with fried crust of bread.

SHORT PASTE.—Pat a pound of best flour upon your pastry slab, make hole in center, in which put an ounce of salt, half a pound of fresh butter and sufficient water to form a stiff paste; mix well together and it is ready for use where directed.

JELLY ROLL.—Three cups of sugar, one cup of butter, five cups of flour, one cup of milk, five eggs, one teaspoon of soda, two teaspoons of cream tartar; bake in thin sheets, spread with currant jelly, and roll when cold.

The Week.

Aside from the north wind, which still has raged at times, the week has been a succession of magnificent days, and they have been used to their utmost by our busy farmers. Every available team and hand has been at work, and the amount accomplished in plowing, sowing and harrowing, in orchard plowing and pruning, and in planting vines and trees, which still continues, has been enormous. Though the clear weather has facilitated this kind of work, a higher temperature and rather more rain would have pleased our stockmen who are waiting for grass to grow. It has been rather a hard winter for the stock-feeder, for he delights in "growing weather," warm and wet,

and his resources have been considerably taxed in securing high-priced hay and feed to hold out until the grass gets some body to it. The hope now is for heavy spring rains which will hold the feed late to make up for the early deficiencies. The general opinion is that this will be a year with such a springtime, arguing from the cold of the winter. There have been years with a vast amount of water in April.

Business activity continues. Real estate enterprises are progressing. Politics are just beginning to warm up. There promises to be plenty to keep the mind employed this year.

The Tariff Issue in Congress.

Probably before another issue of the PRESS is printed, the tariff question will take definite form in Congress. Mr. Mills, who heads the tariff reformers, who are supposed to be working on the line marked out in President Cleveland's message, has been long at work on a bill to accomplish the changes contemplated, and this bill is expected to come before the Ways and Means committee before the end of this week. It has been announced that the Mills bill will contain all the features which California producers have been working against; that is, it will mean free wool and free fruit and fruit products, etc. That such a clean sweep as that will be insisted on cannot, of course, be fully known until the bill leaves the hands of the builders now employed upon it. This reform bill will be met by another representing the protective idea which is now in preparation by Mr. Randall of Pennsylvania, and the telegraph announced that on Tuesday Mr. Randall was considering the articles which are specially produced in California, and which the Mills bill assails, such as almonds, walnuts, oranges, raisins, etc. Mr. Randall is reported to have asked Mr. Morrow whether any reduction could be made in these articles, in the estimation of the people of California. He was informed that the tariff on these articles was not too high, and that the horticulturists and viticulturists in California would not consent to any reductions. It is stated that Mr. Randall's bill will leave the tariff on these articles as it is now.

Thus it appears that the issue as it relates to our chief industries is to be squarely made; but it will be fought, not on its merits, but in view of all the contingencies of an approaching political campaign. This fact introduces many uncertain quantities, and there seems nothing to do but to wait and see what sort of a football game will be played by the politicians with the interests of our industries, which are now growing and promising.

Help to Handle the Fruit.

So far as we heard, the use of the help of the school children during the busy season of fruit canning and drying last summer, was a great aid to the employers and of considerable financial advantage to the children. We believe that children working under the care of their parents will prove of growing importance in this State. It is a vastly different proposition from taking a lot of street Arabs from San Francisco for use on the ranch. In towns in the interior where there are canneries and driers and in orchards near towns where the children can go home at night, there will be plenty of work for them in peeling, cutting and spreading fruit. The use of them can be still further extended by building cheap houses or hiring tents in which families from the towns can be housed during the picking and cutting season. To give the children a chance at this kind of work, the summer vacation of the schools should be lengthened. We are interested in seeing the announcement from Petaluma that: "The public schools will be closed for three months during the summer. This will give an opportunity for the pupils to assist the fruit-canning company during the season, and distribute the hundreds of dollars earned among the youthful workers."

ANIMAL PESTS.—The Ukiah Dispatch says that the Ukiah Scalp Association during the first year of its existence paid for 6 coyote scalps (\$20 each), 20 wildcat scalps (\$2 each), 15 fox scalps (\$1 each), and 2 eagle scalps (\$2 each), and now the ranges within its bounds are pretty well cleaned out of the sheep and lamb-devouring species.

A Proposed Railroad Trust.

It is said that Jay Gould has in contemplation a gigantic railroad consolidation which will embrace a system of roads extending from the city of New York to San Francisco. Mr. Gould's aim is to establish a continental line under his exclusive control. He sees that the California railroad magnates have built a line of their own from San Francisco to the Gulf of Mexico, and threaten the business of his southwestern system. The great operator also views with alarm the efforts of the Vanderbilts to control a line across the continent, operating the New York Central, Lake Shore & Michigan Southern, the Chicago & Northwestern and its extensions by the Fremont & Elkhorn and Missouri Valley railroad west of the Missouri river for more than 500 miles, their destination being fixed at San Francisco.

Another enterprise has for its object the concentration into a great trust, as far as possible, of all the railroads between Chicago and the Rocky mountains and between the British boundary and Indian Territory. The outline of the plan is to elect a chairman for the trust and a board of control, consisting of one representative from each of the members of the trust, this board of control to have entire supervision of the interests of the various roads. The rate-making power is to be lodged with this board of control, and all changes in rates and all questions pertaining to competition business are to be adjudicated by this committee. The capitalization of this trust, if it is carried out, will mount up to the total of fully \$2,500,000,000.

This project, if carried out, will constitute the most gigantic trust scheme which was ever undertaken in any country or in any age. It is thought by some, however, that so heavy an aggregation of capital and corporate interests could not be made to hold together, and even if it should succeed for a time, it would soon come in contact with the law and Interstate Commission. Others think that both law and commission would prove but broken reeds when antagonized by such gigantic moneyed and personal influences.

Whatever may be the outcome of this movement, the possibility of such a combination may well challenge the attention of the country and its lawmakers. Let us make no mistake as to the possibility of such a scheme in the present era of great "trusts" and mammoth combinations. As our laws now stand, the project is no doubt feasible, and by no means improbable, and the people may as well face the contingency and put themselves in position to meet it.

In the meantime it might be the part of wisdom to look around and see what can be done in the way of legislation to circumvent such combinations. Webster once said: "All things are possible with the American people." No matter what may be our wrongs or danger, no matter how impotent our present laws and constitutions may be to meet the threatened danger, the power lies with the people to right the wrong or remove the danger. The people have the power to change constitutions so that laws may be enacted to meet any possible danger to the great mass of the community.

The railroad systems of the United States have been and are of immense benefit to the country at large. By them vast territories have been opened up to industry and civilization, which would otherwise have remained comparatively unpeopled to the present day. But this is no reason why they should be allowed to dominate the general business interests of the country in which they have no other part nor lot than those of a common carrier; but it is a good argument against senseless abuse of them. Railroads are essential factors in carrying on the immense internal commerce of the country; but they are creatures of law. They exist only by the will of the people. The people gave and the people can take away. So long as they perform their legitimate functions in a lawful way their rights will be held sacred by the majority; but when they overstep their functions as common carriers and seek to put aside all competition and fix arbitrary rates, exercising a power which would destroy even a United States Congress, the people have an undoubted right to step in and interfere—so far, at least, as to secure fair competition.

Combinations such as those above alluded to would have more power in taxing the people than the United States Congress. True, the

power might not be used; but the history of the past makes it highly probable that it would be. The present danger of such a possibility renders it expedient that if our laws are not now adequate to deal with such threatened danger, no time should be lost in placing Congress in a position fully adequate to meet the possible contingency.

Bogus Olive Oil.

We have an idea that there is not a little bogus olive oil being put up in this city, the bottles being given brands which would lead one to think the oil the product of California olive trees. This is a bad fraud, not only on the people who really think they are getting a pure article because it has a home label, but, as this stuff goes East, it will deceive Eastern people, whom we expect to make good buyers of our legitimate products. If this thing goes far we shall have to secure an enactment in behalf of our olive-growers, which will put a stop to some of our "four-story-brick" olive orchards of San Francisco.

Incidental to the Senate investigation of the cotton-seed oil trust in Washington, the following, of interest to California, occurred, Trustee John Scott being the witness: "Is not some of this cotton-seed oil sold as olive oil?" "I understand that ubiquitous Frenchmen and versatile Italians put it on the market as such; we don't." "How much of this oil is exported, to come back to us as olive oil?" "About 27½ per cent of the product."

This statement is rather ambiguous. One can hardly tell whether the witness meant to say that more than a quarter of the cotton-seed oil exported came back to us as olive oil or whether more than a quarter of the importation of olive oil was bogus. It does not, however, matter very much, perhaps. It is clear that a large amount of bogus oil starts in Europe; and if this is so, who can tell how much more is put up in this country with imported or with bogus French labels? Probably vastly more than is shipped twice across the Atlantic. It is much the same as with bogus wine. It is far cheaper and easier to import branded corks and labels than to ship bogus wine here. These matters will have to receive the most careful and energetic consideration of Californians. There is a passion here now for the olive. It is possible it may cool down considerably unless a good system of protecting the genuine product is devised. As the product increases the need becomes more imperative. We hope the coming convention at Santa Barbara may start some action in this direction.

THE STATE BOARD OF TRADE continues to receive many callers at its rooms, which are becoming so crowded with exhibits that the committee is again looking for more spacious quarters. They are also still distributing great quantities of printed matter, both to visitors and to inquirers by mail. Among the latest contributions is a superb display of nuts and dried and preserved fruits, sent down by Gen. Bidwell from Rancho Chico, comprising Ne Plus Ultra almonds, I X L almonds, mammoth hard-shell almonds, Languedoc almonds, paper-shell almonds, nonpareil almonds, pecans, California black walnuts, English walnuts, Eastern black walnuts, peanuts, Hungarian prunes, French prunes, apricots, green-gage plums, purple Duane plums, evaporated apples, lye-peeled Muir peaches, cling-stone peaches and raisins.

POSTAGE RATES ON SEEDS.—It is announced by telegraph from Washington that the Senate Committee on Postoffices has been informed by the American Seedsmen's Association that the new Postal Convention with Canada is likely to throw the seed-growing business into the hands of Canadian growers almost entirely. The Postal Convention permits Canadians to mail seeds, plants and scions to any point in this country for four cents per pound, while the United States seedsmen must pay 16 cents per pound. The committee thinks that the complaint is well founded, and will suggest a reduction of domestic postal rates on such matters.

LIVERMORE STALLION SHOW.—This show, which is growing in size and interest year by year, will be held on March 10th. The area of competing country is extended. Stallions from Alameda, Contra Costa, San Joaquin and Santa Clara counties are now to be allowed to compete for the premiums.

The Rabbit-Drive.

The species of hare familiarly known as "jack-rabbit" has long been a troublesome neighbor and pensioner of the California farmer. Hound, gun and poison failed measurably to reduce the numbers of the prolific parasites that laid waste alfalfa-field, vineyard and orchard, and endeavoring to fance out their devouring hordes seemed much like trying to "dam the Nile with bulrushes." The problem was a serious one when the first organized attempt to thin the pests by corralling and clubbing them was made near Pixley, as described in the *RURAL PRESS* of Nov. 26, 1887.

The success of this experiment was so marked and the business of the hunt so exciting that the rabbit-drive at once bounded into popularity, and within the space of less than four months has become one of the institutions of the upper San Joaquin valley.

In our Tulare and Kern county notes we have noticed these round-ups repeatedly; and in our issues for January 14th and 28th gave somewhat extended accounts of the manner of conducting them. "The sport to be gotten out of a rabbit-drive," says the *Tulare Register*, "can never be understood by those who have not participated in one. The hopping, dodging, flying rabbits; the whirlwind of swinging clubs; the shouting of men and boys; the shrieking of the ladies when a jack, fleeing for his life, scoots between their feet; the 'shooting' of other ladies who are the sole occupants of the buggies; the sound of tramping horses and rattling vehicles—all these make a scene to be witnessed, not described. All professions and vocations were represented, doctors, ministers, teachers, merchants, lawyers, real estate men, butchers, newspaper men, etc., clear through from the farmer to the hod-carrier. Old men, whose limbs had long since lost their vigor, tottered along, with the fires of youth rekindled in their eyes, straining every nerve to keep up with the procession, while the nimble 'kid' plunged into the weeds and bearded the jack in his lair. Everything and everybody was on the run, and also on the yell. Wings a half mile each in length, made of wire screen, had been placed in the form of a V, with a circular corral at the apex. Into this corral the doomed rabbits were driven and the gates closed.

"And here, at least so far as the writer is concerned, the sport ended. It is true we got in and tapped a few maimed rabbits on the head, trying to console ourselves with the thought that it was a humane act, but there wasn't any fun in it.

"We really think that if the gate were locked when the rabbits have entered, and the crowd informed that the festivities were over, it would be a great improvement over the present method. The farm-hands could take care of the rabbits after they were corralled. It is a question whether the benefit derived from the destruction of these pests is not after all more than offset by the evil character-influences emanating from this arena of cruelty and destruction. During the drive the passions called into play are of a far different character to those aroused by the work in the corral. The former are the same as those that influence the hunter in quest of game. The rabbit is given a chance, however slim, for his liberty. But in the slaughter-pen, if there is any of the brute nature in the human make-up (and there seems to be some), it finds ample opportunity to display itself. It is not a pleasing sight, that of

boys and girls maiming, beating and clubbing to death defenseless animals, even though they be jack-rabbits. These pests must be killed, it is true, and we don't say that an anæsthetic should be administered before life is taken, but we do not believe that children should do the killing."

By the courtesy of Messrs. Pillsbury & Ellsworth (who kindly sent us the photograph from which our cut is made) we are to-day enabled to show our readers how things looked inside the corral at Dry Creek after 2500 of the nimble nuisances had been knocked in the head. The thick-strewn bodies of the slain, the motley throng of drivers, old and young, male and female, afoot, on horseback, and in vehicles, and the portable wire-woven fence, whose limits proved so fatal to the timid depredators, will in turn engage attention.

It appears that a practical method of dealing with the jack-rabbit has been devised at last, and a source of much anxiety and loss virtually disposed of. But it is desirable to keep before the mind of California that the drive would not be applicable were our "rabbits" very rabbits, instead of what they actually are, a species of hare. The drive would avail little in rabbit-ravaged Australia, because the coney is a burrower, and could no more be herded, penned

Photo by A. J. Jones, Tulare.

AFTER A RABBIT-DRIVE—IN THE CORRAL.

up and summarily dispatched than could our ground squirrels. "The rabbit," says the *Encyclopædia Britannica*, "is sharply separated from the hare by the fact that it brings forth its young naked, blind and helpless; to compensate for this it digs a deep burrow in the earth in which they are born and reared, while the young of the hare are born clothed with fur and able to take care of themselves in the mere shallow depression or 'form' in which they are born. * * * It breeds from four to eight times a year, bringing forth each time from three to eight young."

Let us look to it, then, that the Old-World, "sure-enough" rabbit is never turned loose on this Pacific Coast to honeycomb and plunder its fertile acres.

A CONTRACTOR for wood-cutting at Reno has been forced to give up his job, as he cannot find men to do the work, although the country is full of tramps begging for meals and spare dimes to spend in saloons.

A BAND of horses owned by Miss Kittie Wilkins of Idaho ran before the last blizzard for 200 miles, until they found a sheltered place. None were lost.

THE Texas umbrella tree is becoming a great favorite in Merced and is deemed about as nearly perfect as a deciduous tree can be for shade purposes.

It is claimed that the first sheep imported into the United States were brought to Jamestown, Va., in 1609, and to Massachusetts in 1633.

REDDING, by decision of the Supreme Court, is confirmed as county-seat of Shasta.

QUERIES AND REPLIES.

The Glanders.

EDITORS PRESS:—Having heard and read much recently regarding the spread of glanders, both in California and Nevada, I deem it one of the most important topics of the present day to discuss. Not being familiar with the disease, and believing the *RURAL PRESS* to be the best authority on the Pacific Coast on all subjects pertaining to stock, farming, etc., I beg leave to ask a few questions regarding it.

- 1st. Is the glanders a disease of itself, or is it the culmination of other diseases similar to dropsy?
- 2d. How long would it be, after a horse had become contaminated with the disease, before an ordinary person of good judgment could detect it? (One reason why I ask the last question is I have heard it said that "any fool can tell when a horse has the glanders by the smell.")
- 3d. How long would it be after one horse had taken the disease before another would be liable to take it, by associating with him or feeding in the same stall where he had been kept?
- 4th. Does the swelling commence low down under the jaw in the form of a lump and increase upward, or does it commence up next to the throat on both sides?
- 5th. Is there any danger of a horse becoming diseased by drinking at a tank where glandered horses are in the habit of drinking?
- 6th. Where the disease is known to exist in a community, is it not the duty of the county authorities to take some action to stop the spread of it and abate the nuisance?

SUBSCRIBER.

We have had so many statements from com-

called glanders if the seat of the disorder is in the nasal cavities, throat, lungs, etc., and farcy when it is in the skin, the tissues immediately under it (cellular) and the lymphatic vessels and glands (organs carrying a white fluid called lymph). In these instances it is known as *button farcy*. The disease may appear in two principal forms: the acute or the chronic. But to be more precise, it is better to have a separate description of the malady for each type, viz.: Acute glanders, chronic glanders, acute farcy and chronic farcy."

2. How may glanders be detected?—This question can best be answered by a description of the symptoms of the disease: First, there is an increase in temperature; the thermometer registering from 105 to 109, and there are sensations of cold manifested by rigors (shivering); a serious inflammation of the nasal cavities takes place, their mucous membranes become of a dark-copper color with red or dark spots, due to the effusion of blood, then they become purple, and the red spots or patches, by a gradual but rapid process, form "pit-like, ragged edged ulcers" (Williams), which may extend as far as the throat (inside). A discharge takes place from the nostrils at the beginning or a very few days after, and it is occasionally streaked with blood. In some cases there is hemorrhage from the same source. The glands under and beneath the jaw (the submaxillaries) swell and become hard; the lips, the wings of the nose and the anterior part of the head also occasionally swell, and we frequently see cord-like enlargements of the lymphatic vessels appear upon the cheeks.

There is often a short cough, and if the lungs become affected, as is often the case, the respiration becomes shorter and difficult. Acute glanders may appear primarily, but it generally follows the chronic form.

Farcy manifests itself by fever followed by swelling of the legs, and so far simulates dropsy that there is a disease called "water farcy." The disease which our correspondent has in his mind seems to be farcy, which is said sometimes to occur as a sequel to exhaustive disease. Glanders is, however, in itself an aggressive disease, and its characteristic mark is the peculiar ulcer in the nostril, and the other symptoms described above.

3. Progress of glanders.—Though the two forms of disease have been alluded to as somewhat distinct, they are but one disease, as is proved from the fact that you can inoculate with glanders virus and produce farcy and vice versa. The period of incubation, or time elapsing between the exposure to the disease and its attacks, is variable. By direct inoculation, it may be but a few days or a couple of weeks, and by an ordinary exposure it may last from one to seven weeks, and even two months or more. In addition to the symptoms given above, the following notes for popular use in the detection of the disease were recently given in the *RURAL* by Dr. Clausen of San Francisco:

The symptoms of fully developed glanders are: Discharges of yellowish-greenish secretions, a mixture of mucus and pus, sometimes intermixed with thin streaks of blood from one or both nostrils, more frequently from the left side. The nasal mucous membrane of the flowing side usually shows ulcers of different forms and sizes with torn edges. If the patient is strong and vigorous, some ulcers may heal and form star shaped, more pale-colored scars. The obduction shows often these ulcers on larynx and tracheæ and tubercles in the lungs. The submaxillary gland of the corresponding side is swollen and adheres to the jaw. A dull cough is sometimes observable.

We have to classify this disease into chronic and acute forms.

The first develops slowly. The afflicted animal may for a good while appear to be in good condition, be a good feeder, showing at times only a slight cough and slight discharge from the nose, etc. The owner generally overlooks these slight suspicious symptoms, lets the animal run or work with other stock and facilitates further infection.

The acute form develops with great force and rapidity. The patient shows high fever, great stupor and all symptoms of the chronic form in a high degree, and terminates in a short time with death. Mules or donkeys especially incline to this form.

Farcy symptoms are: Edematous swellings on some part of the body, mainly the legs,

petent veterinarians during the last few years concerning the inception and progress of the disease known as glanders and the ways in which it may be communicated, that we supposed the subject pretty well understood by our readers. However, the subject is of such importance that we attempt a compilation from authorities in good standing about in the line indicated by our subscriber in his questions.

1. Is glanders a disease? Paul Paquin, veterinarian at the Missouri Agricultural Col-

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

Manifestations of Glanders in Different Stages.

lege, writes: "Glanders is a constitutional, fatal disease, originating directly in the equine and asinine species (horse, mule and ass) and transmissible, especially by inoculation, to man, dogs, cats, sheep, goats, etc., and not to cattle nor pigs, nor fowls. It is due to an animal poison, which gains entrance into the animal system, or, as some very able authors claim, is generated within it. The disease is

forming small pustules, "farcy-buds," of the size of a ten-cent piece, which, after breaking, form ulcers, discharging a thin putrid secretion. The lymphatic vessels in the surroundings become swollen and painful and appear like a cord lying under the skin. The lymphatic glands in the neighborhood become also swollen and painful.

4. The swelling.—Concerning the swelling, in addition to what has been given, it may be added that Dr. Whittlesey of Los Angeles remarks that the swelling is a safer indication of the disease than the discharge from the nostril considered by itself. He says it is always on the same side as the discharge, always distinctly limited, hard, and varying in size from a peanut to a hen's egg. At first it is movable under the skin and painful to the touch, but in old-standing cases it becomes fast to the jaw and appears more like a bony tumor. It never forms pus nor breaks unless irritated by medical treatment.

5. Communication of the disease.—This disease is contagious but not infectious, i. e., it does not transmit itself by the virus being carried through the air from a diseased animal to a healthy one. However, as it is discovered that minute organized corpuscles or cells or bodies, which cannot be detected by the naked eye, float in the air, just as minute living bodies, perceptible with certain instruments only, float in the water, we may justly presume that at a short distance, and under other favorable circumstances, cells containing glandular virus might leave an affected subject and be taken into the respiratory organs by a healthy one in the act of respiration. It is at least certainly possible for the affection to reproduce itself by dry farcy or glanders matter rising in the form of dust from places where it has been deposited, and no doubt that a large number of the supposed spontaneous cases are due to this cause, for, under favorable circumstances, such virus, when moistened or diluted, has caused the disease, as experiments prove. The vitality of the poison is preserved weeks, months, and even sometimes a year. It may, however, be destroyed by boiling water, exposure to the weather, the cold, and even the light. No doubt whatever, public water-troughs and hitching-posts are the chief means for distributing the disease.

6. Duty.—It is the duty of the supervisors to stamp out the disease at any wise cost. It is against the law to have or to sell a glandered animal. The Penal Code makes it a misdemeanor to neglect or to refuse to kill such an animal by the owner or the person in charge.

To make some symptoms more easily detected we reproduce from Mayhew the engravings on this page.

Fig. 1 is the slight clear discharge which may occasion no particular alarm at first.

Fig. 2 is the discharge still clear, but becoming incrustated on the hair over which it flows. Subsequently threads of white mucus appear in the discharge.

Fig. 3 is the full stream of unwholesome pus. The clear fluid has disappeared. At this time it may be taken for nasal gleet, but the smell of glanders is peculiar, and in glanders the discharge is obviously impure, while that of nasal gleet is thick and creamy, and more pungent in its smell than that of glanders.

Fig. 4 is the final state of the discharge; discolored, carrying pieces of bone or membrane, clots of blood, etc.

Fig. 5 shows the way to examine the nostrils for the ulcers. Let the sunlight fall on the up-turned nostril. Keep out of the way of any ejection by snorting, for the disease is often fatal to men. Open the nostril as shown. Do not pay any attention to the part marked 1, but look for the appearances upon the membrane marked 2. If on this membrane any irregular or ragged patches are conspicuous, if these patches are darker toward their edges than in their centers, and if they, nevertheless, seem shallow, pallid, moist and sore, the animal may be rejected as glandered.

Stump-Pulling.

Will some reader please give us an article on stump-pulling on the lands next the foothills—the trees that have large tap-roots running into tough clay; also the cost of a stump-puller, the power necessary to work it and where it can be purchased? A SUBSCRIBER.

Pennington, Sutter Co.

AROUND Truckee, Nevada county, this State, the principal industries are the manufacture of lumber and articles made therefrom, the cutting of wood, etc. The condition of trade in these lines is flattering in the extreme. The mills have now large contracts ahead which will insure their running to their full capacity. The railroad company is letting contracts for wood to any one who will undertake to fill them.

FLOURING-MILLS IN WASHINGTON TERRITORY.—There are 64 flouring mills in Washington Territory, with an estimated capacity of 3885 barrels per day. To this number Walla Walla county contributes seven, with an aggregate capacity of 985 barrels per day. Five of these are located at Walla Walla City, one at Prescott, and one at Waitsburg.

A COLUSA COUNTY SUBSCRIBER, remitting for another year in advance, adds: "I have taken the PACIFIC RURAL PRESS for about 15 years, and it is getting larger, and has better reading matter in it every year."

Notes on Santa Clara Valley.

EDITORS PRESS:—Since my last communication the weather has been more favorable for buggy traveling, and I have embraced the opportunity of visiting many of your old patrons in the Santa Clara valley, as well as scores of our brethren who recently bade adieu to the vigorous climes east of the Rocky mountains, and have cast their lot in this favored land. I find, with remarkably few exceptions, that newcomers are gratified with the contrast that greets their entrance to this section. And while no excitement seems to pervade the real estate market, numerous transfers are daily reported at what a year or two ago would have been regarded as simply fabulous prices.

It is now a rare instance to hear of a tract of valley land barren of fruit trees or other improvements, within a radius of ten miles of either San Jose or Santa Clara, being sold short of \$200 per acre; while the same quality of lands planted to fruits and commencing to bear are rated on the average of \$500 per acre. It is not surprising that the "tenderfoot," as he superficially gazes over the situation, is somewhat perplexed to know how such prices can be regarded as legitimate. He knows that the same land in Illinois, Iowa or Missouri will not pay interest on a third of this sum, and are therefore worth corresponding prices. But a closer study and actual observation convince him that the lands, regardless of climatic considerations, are not so unreasonably high-priced after all. Having a regard for my reputation for truth and veracity, I will let the figures obtained from several of the famous fruit and vine growers of the valley speak for themselves. The 130-acre prune orchard of Messrs. Handy & Chrisman between Los Gatos and Saratoga is reported to have yielded last year a net return of 10 per cent on \$2500 per acre. Messrs. Capt. W. Warren, Farwell, Van Fleet and many others in the same neighborhood are prepared to furnish figures (that won't lie) which convince the most incredulous that with ruling markets, the certainty of crops and large average yield, land here is cheaper than it was 20 years ago without such advantages as exist at present.

If any doubt should still linger in the mind as to the wealth-producing power of lands in this valley, I think that a visit to the model vineyard and winery of J. B. J. Portal, Esq., three miles west of Santa Clara, will be effectual in dispelling the same. Your correspondent recently spent a very pleasant hour with Mr. Portal at his plantation, and takes the liberty of jotting down a few of the facts gathered, trusting they may prove of interest to others who are struggling up the hill of success in the path made by him; for let it be remembered, he is the acknowledged pioneer wine-maker (on a large scale) of Santa Clara valley. He began 20 years ago, and much is due him for the aid he has rendered science by the constant experiments he has made in the introduction of numerous varieties of the grape, and in the manufacture of wines. And so well has he succeeded that now he is able to report a demand in England and France for all his manufacture at most satisfactory prices. The vineyard consists of 200 acres and is one of the best cultivated I have seen. I was informed that his manufacture the last season aggregated 400,000 gallons, and that all has been engaged. The delivery at the railway depot commenced three months ago at the rate of two carloads per day, and will still require at the same rate two months more to empty his warehouse. Mr. Portal owns an elegant residence, which, together with the winery, storehouses, machinery, etc., entailed an outlay of about \$100,000, rather a large sum, yet no more than time has already demonstrated he was justified in expending on it, as he refused last year to convey his title to an English syndicate for the consideration of \$200,000. He has always been enthusiastic on the subject of vine-growing and wine-making in California, and advancing years seem not to have had the effect to diminish his ardor and public spirit, and accordingly he intends to visit Paris this year to perfect arrangements for the shipment of California wines. More of such men as Mr. Portal would soon put our State in the van of all competitors.

A call later at the winery of Mr. J. P. Pierce, Santa Clara, gave me an opportunity of inspection of a comparatively new but quite successful establishment, the capacity of which is 150,000 gallons. The manufacture of this year was 125,000 gallons wine and 3000 brandy. The product of the last two years, 275,000 gallons, is in storage at the winery and will be held for an advance. Mr. Pierce has a vineyard of 160 acres of first quality vines, and he is classed among the public-spirited men of Santa Clara.

Mr. A. Block, adjoining Mr. Pierce, is another of those men to whom California owes something for her advancement in horticulture. He owns a pear orchard of about 90 acres, and he is an authority on the propagation of fruits. Mr. Block's homestead, when formerly owned by L. A. Gould, furnished fruit for the first shipment east of the Rocky mountains from this State.

Near Campbell's Station I was shown a cherry tree on the farm of Mrs. McGlinchey that yielded last year about 1000 pounds of cherries which were sold for \$78. The expense of picking, etc., left a net income of \$70. The tree is estimated to be about 20 years old. At 100 such trees to the acre, figuring interest at

ten per cent, a single acre of land would represent a good yearly income.

This valley is becoming famous in another sense besides the production of its choice fruits, which is one of the chief attractions for all who seek a home here. In my travels I have found quite a number who have abandoned professional life and sought and found a more congenial pursuit in the culture of fruits. Among such I have met some whose ancestry figured conspicuously in our national history.

Near Saratoga live two daughters of John Brown of Harper's Ferry notoriety. The youngest, Mrs. Fablinger, whom I met, appears to be about 30 years of age, fair in appearance, and agreeable in conversation. Regarding the sons, I learned that one now resides at Mendocino, two in Los Angeles, and a fourth in Ohio.

Winchester, of rifle fame, has a descendant bearing his name, residing on a fruit farm in this valley, while the still more illustrious Grant is represented by a Dent, and this does not fill a tithe of the roll-call.

But why should any hesitate to engage in such pleasant and profitable occupation? Those of lesser fame, though perhaps of equal talent, number legion here. A few days since I was pleased with the meeting of S. H. Bigland, Esq., an English ex-journalist, located in the romantic region lying between Los Gatos and Saratoga, where he with his family has decided to end the balance of his days amid the perfumes of fruit blossoms and the enchantment of beautiful valley and mountain scenery.

It might appear a little remarkable that those whose thoughts have hitherto been directed in other and very different channels should so readily adapt themselves to horticulture in California. Without stopping to discuss the reason, I would state that in numerous instances I have noticed that the amateur who chooses fruit-growing from a love of it, no matter what may have been his former occupation, succeeds better, as a rule, than those who have been plodding along at the business for a lifetime, regarding their work more as a task than as an ever-varying pleasure. The place of the Ellsworth Bros., Saratoga, affords an example in question. Six years ago they took charge of a 60 acre tract of unimproved land with a limited capital and no experience in agricultural affairs. To-day they can point with pride to their accomplishment—a fine orchard and vineyard and 10,000 gallons of wine made from their own vines.

It may be of interest to note that the culture of fruits has fired the genius of inventors to the extent that numerous patent cultivators have appeared from time to time, some of which I had the pleasure of examining. Each has certain merits which the orchardist is better capable of passing judgment upon than the writer. Forbes & Son, Guberville, claim to have manufactured 50 and sold the same; W. H. Roberts, Meridian, reports having made 300, which have given high satisfaction to customers; while John Morgan, north of Santa Clara, claims to have brought something before the people that excels. I am sure all these gentlemen deserve the patronage of the community for their enterprise, and this they will doubtless receive.

I recently called on Mr. H. G. Keesling, the principal importer of the Langshan breed of poultry in the country. Some of his stock cost him \$10 each, the pure offspring of which he is selling at half that price, and a large number of American stock of Langshan descent he offers at \$2.

There is no surer index of the taste and culture of a community than the interest manifested in the buildings erected for educational purposes, and no section of the State can surpass this in the character of the schoolhouses of either town or country. As a rule, they are elegant and commodious. And now the people of Lincoln district, near Saratoga, point with just pride toward their building under construction, which will probably rank, when finished, as the finest outside any town in the country. The young people of this and the Collins districts have united on a proposition to erect a 30x60-foot hall for social purposes, which, together with an elegant church edifice in that neighborhood, is calculated to furnish attractions sufficient without too frequent resort to the towns, which do not always inculcate the highest code of morals.

Northwest of Santa Clara is found the finest garden soil in the valley. Upward of 1500 acres of land are annually devoted to vegetable seed production, and so successful has the experiment proved that fortunes are being derived from the business, and I am informed that the extensive seed gardens of Connecticut, by reason of inability to compete, are about to become a thing of the past. Berry culture is also engaged in to a great extent in this section, which is known as the artesian belt. Hon. I. A. Wilcox, whose fine farm is situated in the district, informs me the soil is specially adapted to prunes, of which he is planting largely. At the same time he has a large acreage of strawberries, of which fruit he ships tons annually. Mr. Wilcox's place is the pioneer berry farm, and was long known as the experimental gardens. This gentleman imported the first fruit trees into California, and was largely instrumental in instituting the American Horticultural Society, which has rendered such invaluable aid to science during the brief career of its existence.

In a future communication I will furnish the RURAL PRESS with some facts on olive culture, which I have gleaned from observation and from E. E. Goodrich, proprietor of the Quito

farm, and others engaged in this new California industry. The subject is awakening such widespread interest of late from the fact of California's special adaptability to its production, and excellent market which pure oil commands, that any light furnished on the subject cannot prove other than welcome to many.

Santa Clara, Feb. 18, 1888.

Squirrel Poison.

The Salinas Index publishes the following recipe which is said to be the best squirrel poison in existence. D. Monroe, who sends it to Mr. Williams, has completely cleared the Peach Tree ranch of squirrels by the use of this compound, which he says is a "dead sure shot every time." After being prepared, a small quantity of the wheat is dropped into the holes and is eaten with avidity by the squirrels.

140 lbs. good wheat.
12 ozs. strychnine.
1 oz. cyanide of potassium.
1 oz. carbonate of baryta.
2 lbs. of flour.
6 lbs. of honey.
2 lbs. sugar (white).
3 gallons of lukewarm water.

Mixing.

1st. Powder the three poisons with pestle and mortar to flour and mix thoroughly with the flour.
2d. Dissolve the honey and sugar with the water thoroughly.

3d. Put the wheat in a tight box or tub and mix the liquid of water, sugar and honey thoroughly; then empty out on a piece of canvas for the purpose in the sun, and spread out in the thickness of two or three inches.

4th. Sprinkle the poison over the wheat thus spread out and stir thoroughly through and then let stand for an hour in the sun; then stir again until the wheat becomes thoroughly dry, when it is ready for use.

CAUTION: In pulverizing the poisons the operator should place a sponge over his mouth, as there might be danger of inhaling some while handling.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Our Agents.

Everything for the Garden

Is the comprehensive title of Peter Henderson & Co.'s Catalogue advertised in our columns. It is a handsomely bound book of 140 pages, illustrated by three colored plates, containing hundreds of illustrations of flowers, fruits and vegetables, improved implements, etc. The "instructions for culture" are written by Peter Henderson, the well-known authority on everything pertaining to garden work. This book, "Everything for the Garden," is mailed on receipt of 25 cents, which is about half its cost, on the understanding, however, that parties ordering will say in what paper it was seen advertised.

Gabilan Rancho.

Containing 7665 acres, situated near Salinas City, Monterey County, is offered for sale. For particulars address J. C. HOAG, 312 Van Ness avenue, San Francisco, or TYLER BEACH, San Jose, Cal.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

GORGEOUS in its coat of many colors—blue, green and orange, crimson and gold—comes the catalogue of J. O. Vaughan's great Chicago seed store; and its 80 quarto pages are not only illustrated by countless admirable engravings, but also embellished with several full-page chromolithographs of choice melons, floral novelties and climbing plants.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and on liberal terms. Address J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

100,000 Fruit Trees for Sale

At reduced prices, consisting of Apple, Pear, Peach, Apricot, French Prune, Walnut and other trees. Palms, Grevillas, Monterey Cypress, etc. Trees are guaranteed to be absolutely free from scale or other insects. MILTON THOMAS, P. O. Box 304, Los Angeles, Cal.

THE LOUISIANA TRACT!

SITUATE ONE MILE FROM THE FLOURISHING City of Sacramento,

With a Population of 30,000, and

$\frac{1}{4}$ MILE from Terminus of an ELECTRIC RAILWAY, now in course of construction.

A. S. BALDWIN.

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES
At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. One hundred and seventy-five acres at Palermo are now being set out in the choicest varieties of Florida Orange Trees. Maps and further particulars of

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land? DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?

DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10 acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

BRIGGS, FERGUSON & CO., General Agents,

314 California Street, - - - - - San Francisco, Cal.

OR RIVERSIDE, CAL.

WEST COAST LAND COMPANY.

CONTINUED EXTRAORDINARY SUCCESS. 26,000 Acres sold in 17 months in subdivisions averaging about 80 acres, to over 300 families, and amounting to \$700,000. 38,000 acres to be closed out this year without any general advance in prices.

Location—San Luis Obispo County, at present terminus of the Southern Pacific Railway. A GRAND NATURAL PARK, and in climate, location, quality and price, far surpassing any other section of the State. Specially adapted to the production of wheat, oats, barley, olives, raisins, wine and all deciduous fruits.

RICH SOIL, NO WASTE, SUFFICIENT RAINFALL, NO IRRIGATION.

Average price \$25 an acre; terms five years, 6 per cent. These lands are selling rapidly, and parties interested in having a home in one of the finest sections of the State and on the through overland railway, should examine and select at once. Take S. P. Railway at San Francisco, to Templeton in 8 hours. Apply to or address

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

SAN LORENZO PICK UPS.—Hayward *Journal*, Feb. 25: The Grangers here were never livelier than this week. The dry north wind frightened them somewhat and seed-sowers and harrows were in demand. All look for a shower to follow the gale. Almonds are in blossom, though they are two weeks late, probably caused by the cold snap. Apricot buds are bursting, and in another week will be in full bloom. Plows are going steadily in all the orchards, turning under a large crop of weeds that are growing fast.

Butte.

FIG-PLANTING.—Gridley *Herald*: Among the many ranchers of this vicinity who have very sensibly concluded to raise something besides wheat is George M. Lewis. He has set out 100 fig trees of the White Adriatic variety. It is said these trees will yield a profitable crop at the age of five years, and he set out yearlings.

CITRUS TREES.—Wm. Dunstone writes the Oroville *Register*, under date of Wyandotte, Feb. 13: During the cold weather of last month the thermometer was probably lower than at any time since January, 1884. I think the *Record-Union* is correct in referring to the last-named season as a precedent. I think my lime trees are killed to the ground. Lemon trees are injured; but I do not think that any serious damage has been done to my orange trees, although a portion of the fruit was rendered unmarketable. In examining the orange trees it appears to me that most vigorous trees are the least injured. Trees that have not been growing well are more injured. In all my experience with trees I think that no other trees show so readily nor in so great a degree the result of neglect as a citrus tree, and that no tree gives a better response to good treatment. It appears to follow that orange trees should have room, manure and cultivation. Some appear to think that in case of late growth the new wood is liable to be killed when winter sets in. I do not think so, because our coldest weather does not come until December or January, and by that time the young growth is mature enough to stand the cold without serious damage.

Calaveras.

GRAPES.—San Andreas *Citizen*: The finest grapes brought to this market last season were grown on the ranch of J. Zwinge, about three and one-half miles from this town. They were of the Black Hamburg and Black Alexandria varieties, and were very large and well flavored. Mr. Zwinge has a large number of rooted cuttings of the above kinds, besides a number of others of choice varieties.

El Dorado.

LATE SOWING.—Fairplay *Cor. Republican*, Feb. 18: We are having splendid weather for farming now, and although it seems late, a great many of the farmers are just sowing their grain. It is very probable that which is sowed now will look better in a few months than that which was sowed before the cold weather.

Lassen.

MOUNTAIN VALLEYS.—Cor. Susanville *Mail*: On the 4th day of February, 1888, I was riding along the stage-road from Reno to Susanville, and in passing the shores of Honey lake I saw 20 or more teams in the fields plowing, harrowing and drilling in grain. Our farmers were out in force putting in crops, seemingly unconscious of the fact that it was midwinter, and that we live away up here in the mountains, in a country so little known in the great world that the few who have heard of it imagine that we live such close neighbors to the eternal drifts of snow that our winter must last all the year. Who in the civilized world but has heard of these beautiful mountain valleys which lie snugly at the feet of the great Sierras, looking toward the broad deserts of the east? I looked up to the huge drifts of snow away up on the mountains to the left, then upon the busy farmers plowing and sowing in midwinter at their very feet, then out upon the broad valley to the right, where lay hundreds of thousands of acres of uncultivated public lands, which are to be the best agricultural lands in the world when properly irrigated, and, being farther from the snow-drifts, are warmer and more congenial for winter farming than the lands already under cultivation.

Los Angeles.

CANNERY FOR POMONA.—*Progress*, Feb. 23: There is cause for rejoicing among the deciduous fruit-growers in these parts, inasmuch as a home market for their products may now be had here. Last week J. H. Mertz, of Sedalia, Mo., arrived in Pomona, and, impressed with the fact that this is a first class location for a fruit-canning factory, at once wrote to C. C. Morse, a former fruit-canner at Windsor, Mo., who is now in Southern California, to come to Pomona. Messrs. Mertz and Morse immediately decided to build a cannery here, provided they had aid from the Pomona citizens. A subscription paper was started and in less than 30 hours a sum of money was subscribed sufficient for buying lots one and two in block 22, and presenting the same to the cannery company for the erection of the factory, evaporator, etc. The papers were signed by Messrs. Mertz and Morse and a committee of our business men yesterday.

CAPISTRANO MATTERS.—Cor. Santa Ana

Standard, Feb. 20: Small grain crops are all in and looking well, with a good prospect for an abundant yield. Orange-picking has commenced and we can boast of a heavy crop and as fine-flavored oranges as can be found in this State. Stockmen are happy and "treat" everybody they meet. The hills are covered with luxuriant grass and it fattens one to look at them. Lambing season is at hand. Thousands of the pretty little beasts are seen on every hand. Beemen from Trabuca and Mission Vieja report a good outlook for honey this season.

Napa.

THRIFTY VINES.—Napa *Register*, Feb. 24: L. W. Spielman, proprietor of the Tule ranch, a few miles west of Monticello, sends us three or four cuttings of Rose of Peru, one of which measured 19 feet in length, and all were over 18 feet. This is the growth of one season only, and speaks well for the soil of the hills bordering Berryessa valley for grape-growing. To show that his vines fruit well, and that the climate is favorable for fruit-drying, Mr. Spielman also forwards to us a box of as fine raisins as can be procured in the market of the Moscat of Alexandria; also samples of dried apples and prunes that cannot be excelled, all cured in the open air.

San Diego.

SAN JACINTO THRIVING.—Cor. Union, Feb. 14: The glorious weather of the past week, following the late rains, is carpeting the San Jacinto valley with green. Thousands of acres are covered with fresh filaree, bunch-grass and bur-clover; the cattle are glad, the horses not sad, and the song of the turtle is heard in the land. A trip along the principal avenues shows the farmers everywhere busy with teams and plows, planting all sorts of crops, putting out orchards and vineyards, preparing for hedges and building sites.

CHEAP FUEL is one of the blessings of San Jacinto. There is a broad belt of cottonwood timber skirting the valley on the north, the great trees standing thick on the ground. In the center stands a sawmill, gnashing its relentless teeth over the fallen giants. The people frequently get their fuel for nothing, by taking limbs, dead trees and bark. Excellent wood may be obtained for 50 cents per wagon-load. Many of the farmers have plenty of wood for their own use on their own land, as there are narrow tongues of the forest extending out in different directions into the level valley.

PEANUTS.—San Jacinto soil is an alluvial mold, with just the right admixture of sand, and seems expressly made for the peanut. The hot summer sun and dry atmosphere and the long seasons are exactly adapted to the production of the largest and best crop. One little patch about twelve yards square produced three barley sacks full of the largest, plumpest nuts I have ever seen—every one filled with solid kernels.

San Mateo.

PILARCITOS PRODUCTS.—Redwood *Times and Gazette*: Pilarcitos valley has become noted for its meats, butter, fruits and honey. Our beef is of excellent quality; S. F. butchers assert that the best beef they get comes from the hill lands of the coast. The luxuriant growth of bunch-grass and evergreen grasses and shrubs serve to keep our stock in good condition, while stock in the open valley lands have to depend entirely on the fodder they get from the barn. Consequently when spring opens the stock in the foothills are already beginning to fatten. Many kinds of fruit can be raised to perfection; the most prominent are the apple, pear, plum and cherry; among the smaller fruits are strawberries, blackberries, currants, gooseberries and raspberries. The leading orchards are those of H. M. Jewell and Mr. Gilchrist. That of J. Fillmore is a very thriving young orchard. Bee-culture is a promising industry in this locality. The honey raised in the foothills is superior to much of that so-called southern honey; the mild climate makes it unnecessary to give the bees any extra protection in winter, and as a general rule the apiaries yield a handsome interest on the capital invested. Among leading apiarists are M. Knopf, H. M. Jewell and M. Diggs.

Santa Barbara.

THE VISITING HORTICULTURISTS.—Santa Barbara *Press*: A party of members of the American Horticultural Society arrived on the local train Friday morning, and were dining at the Raffour restaurant, after which they spent the remainder of the day in riding around and visiting many of the places of interest in Santa Barbara. During the evening a reception was given them in the art-rooms of Prof. H. C. Ford, which was largely attended by prominent citizens. The visitors were domiciled at the Morris house. In order that they might have some idea of what can be raised here, Mr. Joseph Sexton on Saturday succeeded in getting together a small but attractive exhibit of fruits at his floral depot on State street, which attracted great attention. Among the fruits exhibited were loquats, olives, soft-shell walnuts, several varieties of winter apples, dried fruits of various kinds, cherimoyers, oranges and very fine Japanese persimmons, as well as samples of guava jelly, pickled walnuts, pickled olives, etc. H. C. Ford sent a fine sample of the sapote, and a branch of dates from the Hollister estate attracted the greatest admiration. Mrs. H. B. Brastow sent a basket of guavas grown in her garden in this city. Before the horticulturists left they met at the Morris house and passed the following resolutions:

Resolved, That the members of the American

Horticultural Society return grateful thanks to our associate, H. K. Bradbury, to the Board of Trade of Santa Barbara, and to the citizens generally, for the kind invitation to visit this land of roses, beautiful homes, sunshine and balmy breezes, and for their generous hospitality during our stay. That we enjoyed more than we can express the delightful drive given us over the city and surrounding country, in which we noted the luxuriant growth of all the semitropical fruits by the side of the deciduous fruits of the temperate zone, which was to us a matter of surprise and admiration; that we were greatly interested in the old Mission and its quaint, antique surroundings and in the decorated grounds and grand scenic effects in and around Montecito, and in the grand old grapevine; and much more of which we shall cherish pleasant memories in after years.

Resolved, That this society return sincere thanks to the citizens and to Prof. H. C. Ford and his estimable wife for the very enjoyable social and art entertainment given us at Prof. Ford's studio.

Santa Barbara, Feb. 20, 1888.

Santa Clara.

RANCH RETURNS.—Free *Lance*: Wm. Buck of San Felipe believes there is profit to be obtained from a ranch. From the few acres he cultivated last year he raised large quantities of vegetables, 300 tons of alfalfa, 1360 boxes of apples, 500 boxes of pears, and much other produce. He cut his alfalfa four times, it averaging 1½ tons to the acre each crop. This was worth \$10 a ton. Mr. Buck sees no reason why alfalfa hay is not about as good as wheat hay, which is worth \$15. His apples brought him 65 cents a box. Nearly all these were shipped to Australia, although some went to Colorado, Nebraska and Kansas. The pears brought \$1.55 a box and were shipped to the canneries at San Jose. They were principally Bartlett's.

Stanislaus.

PLANTING OLIVES.—Modesto *Herald*: The olive industry is attracting considerable attention in Oakdale. Mr. A. S. Emery has planted on a small tract of land he recently purchased in the eastern suburbs of Oakdale 3000 of these prolific trees, and others have engaged in the business on a small scale.

Tehama.

STONE FRUITS.—S. A. Stiles in *Sentinel*: Three years ago a few acres of peaches were set on Mrs. McCormick's place, six miles south of Red Bluff, on the river bottom. Last summer—although but little care had been taken of said orchard—I picked fine-flavored peaches which measured 12 inches in circumference. Fourteen months ago I put 23 acres into fruit—15 in apricots and 8 in peaches. Over 98 per cent of the trees lived and did well. They were cultivated eight or ten times during the season, and made a big growth—some of the longest branches having grown to the length of eight or ten feet. This winter I am putting out more fruit trees and also three or four acres of vineyard. One year from next summer we expect our first crop.

Tulare.

STALLIONS AND JACKS.—Delta: It is proposed to have a stallion show for all fine stock in Tulare county, at Hanford, on the first Saturday in March, and in Visalia on the second Saturday in the same month. Stallions of all breeds and ages, and jacks, will be admitted. The stock will be paraded on the main streets of the places named. This county has a large number of fine animals, and the exhibit will undoubtedly be an interesting one.

WAS IT MILKWEED SEED?—Visalia *Times*, Feb. 23: A number of horses belonging to farmers in the White River country have sickened and died in the last few weeks, from the effect of a disease supposed to have originated from milkweed seed with the hay. There is more or less milkweed found in all the hay raised in the country between Deer creek and White river. E. G. Burton of the latter section informs the *Times* that a veterinary surgeon, interviewed in reference to the matter, says that he had found more or less milkweed seed in the barley fed to stock, and he believed the disease to have arisen more from this cause than from the hay that was fed.

Ventura.

WILL WALNUTS PAY?—Free *Press*, Feb. 24: G. G. Sewell of Santa Paula gathered from one tree on his place, which is 15 years old, 240 pounds, for which he received 10 cents per pound, or \$24. At 30 trees to the acre, which is a moderate estimate, it would give \$720.

Yolo.

DAVISVILLE JOTTINGS.—Yolo *Democrat*, Feb. 21: The north gale of Monday morning brought down a cloud of ashes and cinders from the tule fires beyond Woodland, which for an hour or two almost obscured the sun. Grain is looking well and the crop prospect was never more promising. Ducks and geese are very destructive to the young grain in the vicinity of the tules. On the Chiles ranch a herder is employed with a Winchester rifle by day, and at night lighted lanterns are hung out. It is now known that the cold of January did but little more damage to the orange trees here than in the southern citrus belt. The older trees may lose their foliage, while a few of the younger ones may be killed.

Yuba.

CITRUS CULTURE.—Marysville dispatch, Feb. 25: A lot of young orange trees, grown in the open ground of a nursery here, were shipped to Red Bluff to-day in fine condition. This is evidence of how well the citrus trees here stood the weather last month—the coldest ever known. A lady who for years past has derived considerable income from an acre or two

of orange trees is increasing her orchard this spring as a matter of business.

A HORTICULTURAL SOCIETY for Sutter and Yuba counties was organized in Yuba City Feb. 24th. George Ohleyer was elected president and H. P. Stabler secretary. The meeting was enthusiastic.

NEVADA.

RANCHERS BESTIRRING THEMSELVES.—Nevada *Transcript*, Feb. 22: A gentleman who had occasion to visit some of the ranches in the lower part of the county last week says that the improvements that have been made during the past year are truly remarkable. The ranchers are just realizing that they have valuable properties and are cultivating more ground, putting up more fences, renovating their buildings and doing more work than they have at any time during the past 20 years.

ALFALFA FEED.—R. H. Reimers in *Enterprise*: Our two-year-old cattle, fed upon alfalfa, will weigh as much as three-year-old cattle of any other section of the world fed upon any other grass, and our three-year-old horses are just as good and as fully developed as other four-year-old horses. That's what alfalfa does for us, but it has this drawback: If cattle are turned too soon in the spring upon the young grass the first mouthfuls will bloat them, but if the grass is grown well there is no danger whatever. Pigs should not be fed upon alfalfa before they are six months old. After that if they have a little grain with the alfalfa and run in the stubble-fields their meat will be as firm as grain-fed pork, and the butchers can make all the bloody wurst they want with it. I have sold the Comstock butchers \$1000 worth of hogs this fall, and I am here arranging to sell them more, and also some beef cattle.

TRUFFLES.—Territorial *Enterprise*: Truffles of excellent flavor are said to be abundant in the foothills to the westward of Washoe valley. The Washoe Indians are about the only persons in that region who eat them. These Indians also devour the snow-plants with avidity. Both the snow-plant and the truffles are eaten raw.

OREGON.

A MODEL FARMER.—Rogue River *Courier*: Daniel Sheehan is one of our representative men and a model farmer. He runs his place on a safe, economical, and it might be said, scientific basis. He diversifies—each spring and fall turning off a number of live hogs and cattle, aside from which he usually has a good deal of bacon and lard to dispose of at the very highest market price, simply because he gets around before the market is overdone. He does not farm extensively in cereals, though at one time this was his hobby. He pays more attention to butter making, poultry and stock, and is successful. He has resided in Josephine county for 31 years, and has a little farm of 280 acres, 125 of which are under plow. He is wide awake, keeps posted on events of the day, prosperous—made money and is in a position to do still better.

SWAN POULTRY.—Oregonian, Feb. 24: Three swans captured on Sauvie's island some time ago, and which have since been kept in a coop by Norwood L. Curry of East Portland, were shipped a day or two since to their owner, Mr. J. D. Canton of Ottawa, Ill., a wealthy citizen of that city, who will place them in a small lake on the extensive grounds surrounding his residence. They have become very tame, and their wounded wings were quite healed. The swan which flew under a shed on the island, and was captured unharmed a short time since, is now running at large, with its wings clipped, among a band of geese in McGuire & Co.'s poultry-yard, and is as tame as the geese themselves.

CROP PROSPECTS.—Oregonian, Feb. 24: Winter wheat on low land not protected by snowfall has been injured so much that it has been necessary to replant the damaged fields in many instances. The greatest injury has been in the case of summer-fallowed fields that were sown early and got a good start. White stubble land that had to be plowed before sowing, has generally escaped any injury at all. The reason for this is that the early-sown wheat came up and made a good growth, the roots spreading so that when the frost "spouted" the land, its icicles literally caught these wheat roots and threw them out on the surface. The very late wheat had only just put in its appearance and had no roots to be handled in this manner, so it escaped. The loss on French prairie and the north part of Marion county will be thousands of acres, but where not too low, it was in good part rectified last week. Farmers sowed it again and ran a cultivator over it to cover the wheat, and may do better than some will who were not so much injured. A great deal of winter oats was killed out. Fortunately for most farmers, the weather of last week made it possible to resow and run a cultivator to cover the seed. There is some injured wheat in the Waldo hills and on the low prairies everywhere; especially in parts of Linn county there is damage from frost. Wherever the snowfall was sufficient to cover the ground, winter grain of all kinds looks well. So far as can be learned the orchards of this valley received no injury from the cold spell. The warm weather of last week may start the sap flow and give the trees a quickening that may result in injury, but Oregon has often seen peaches in bloom in February and had them bear well.

ACME PULVERIZING HARROW, CLOD CRUSHER & LEVELER.

DON'T BE DECEIVED BY WORTHLESS IMITATIONS.

All genuine bear Trade-Mark, have Steel Clod Crushers, Double FLEXIBLE Gang Bars, and the Improved Style also has

ADJUSTABLE REVERSIBLE COULTERS,

Which when worn may be turned end for end, thus giving double the amount of wear. Works the entire surface of the ground. No other Harrow combines these points.

Sizes: 3 to 12 Feet. With or without Sulky.

MYERS' SLIP SHARES

FOR SALE BY

D. N. & O. A. HAWLEY,

2 & 4 Sutter St., cor. Market San Francisco

Ladies' Eton Costume.

The style of the costume is decidedly novel, and the materials here chosen for it are plain and plaid bison tweed, ivory-white faced cloth and reddish-brown velvet. The foundation of the skirt and also its attached draperies are of the plain goods, the standard shape being employed for the former, and the customary provision being made for the use or omission of reeds and a bustle. The draperies are voluminous in their proportions and entirely conceal the foundation, except for a short depth at the left side of the front. The right-side edge of the front drapery or tablier is included without fullness in the right-side back seam, but the left side is uplifted by several upturning plaits near the top before being inserted with the corresponding side-back seam. Plaits arranged at the belt so as to turn forward at each side of the center supply the remainder of the draping, and all the plaits assist in producing the many graceful folds. Both side-edges of the back drapery are included with the side-back seams, and its bouffant appearance results from a triple box-plait at the right side and several backward-turning plaits at the left side of the center at the top, together with three upward-turning plaits at the left-side edge and several tuckings to the skirt. The drapery edges and the foot of the skirt are untrimmed, but sometimes a balayouse plaiting will underlie the latter, its presence only being made known by the movements of the wearer.

The basque is of plain tweed and has a stylish vest of ivory-white faced cloth. Its fronts, which are lined with silk, are loose-fitting, but do not meet at any point, but above the bust are turned back to form revers, which are held together at their lower corners by cord passed over two olive buttons, one at either side. The vest is adjusted by double bust darts, narrow under-arm and side-back gores and a curving center seam. Button-holes and pearl stud-buttons close the vest its entire depth, and one of the season's special fancies is illustrated by the tracery of brown soutache upon the white background of the vest. A high military collar of white cloth showing a similar tracing is at the neck, and a rolling collar of reddish-brown velvet meets the ends of the lapels in notches. The close-fitting sleeves are completed with simple little baton-trimmed cuffs that are finished with machine stitching, and the lower edges of the basque and its front edges below the lapels display a machine-stitched finish. The lingerie consists of linen cuffs and collar.

Costumes of this style will generally receive a tailor finish; a combination of materials is almost essential to bring about the good effect, though sometimes the contrasting fabric will be used only in the vest or waistcoat. White corduroy or velvet will make pretty vests for union with ivory; sage, hunter's or serpent's green bodices, and biscuit cloth overlaid with tinsel braid for association with those of mahogany, acajou or cinnamon. Cloths in herring-bone stripes, plaids, checks, bars, etc., will develop well in this way, and the suitings known as the velours soutache, which show designs like soutache braiding woven upon them, will be advantageously displayed by the style of drapery. A lining of soft silk or satin is an imperative addition to the fronts of the basque on account of their *neglige* adjustment.

The walking hat is of brown beaver, with a velvet-faced brim and glaze ribbon showing brown and moss-green, and two moss green wings trim it.

F. B. LOGAN, special correspondent of the PACIFIC RURAL PRESS, *Pacific States Illustrated Weekly* and fraternal journals, was in town this week on business. His letter last week in the RURAL PRESS was first-class, and will be of much benefit to our readers. — *Los Angeles Herald*, Feb. 17th.

A \$30,000 HOTEL is to be built at Colfax from plans by a prominent architect of this city.

Fig-Growing in the San Joaquin Valley.

Judge C. Talbot delivered the following address on the fig before Tulare Grange on Feb. 18th, and an advance copy was sent for publication in the RURAL PRESS. Our readers will find it interesting and suggestive:

The fig, of all trees, is the most venerable for its antiquity, and is most noted in history.

leaves, ye know that the summer is nigh." We also read that our parents clothed themselves in regalia made from leaves of the fig tree before presenting themselves to our Great Master, after the manner of our own members. From that day to this the fig tree, with her delicious and nutritious fruit, has been an important factor in the food of both man and beast, and also an important article in the commerce of the world. And here on the western boundaries of civilization where the restless waters of the Pacific dash against the golden

soil and climate. With our limited experience in fig culture, it would probably be presumptuous to make any predictions as to where the best districts for her culture may be found. Yet I am going to risk the assertion that future demonstration will prove that the western base of our great Sierra Nevada range, from Red Bluff on the north to Bakersfield and beyond on the south, from an altitude of from 300 to 1000 feet, will be the region where the best results will be obtained from the culture of the fig. This may properly be termed the

Sunshine Belt of California.

It is above the fog belt of the valley and beneath the cloud belt of the mountains. Of course I don't claim an exact line, but this is approximately the line. It will vary according to local and topographical surroundings. Here the great eastern hedge of pine and rock will break off the too sudden rays of the morning sun, and will catch the last kiss of his departing rays, as he sinks beneath the western ocean amid a sheen of golden splendor.

The fig, of all other trees that I know anything about, has the best staying qualities. It has doubtless been observed by all who have traveled over California, where an orchard has been started and finally neglected, if there has once been a fig tree planted, that while in the case of all other trees nothing but a charred body or rotten stump will mark the place of the once vigorous tree, the fig will remain alone vigorous and thrifty as ever. I will here recite an instance that came under my observation a few days ago: In passing the old Indian reservation, above Porterville, my attention was attracted to some very large trees. I took the trouble to measure one among several, and it measured nine feet in circumference a few feet above the base, and its sweeping boughs covered a space of ground 20 steps in diameter. I was informed by Judge Redd, of Porterville, that there is a tree at Lamot's ranch, on the South Tule river, that is considered a larger tree than this. There is a tree that I have watched with a great deal of interest for the last five years. It is on the lands of Butler & Ray in Butte Cove, four miles northwest of the Pilot Knobs, and some 12 miles northeast of Visalia. The tree was planted by some one who occupied the place previous to Mr. Butler, and doubtless watered it at first; but since Mr. Butler came in possession he has let it severely alone, never allowing any one to water, prune, or cultivate the ground. The tree has continued to make a fine growth and bears two crops of figs every year. It is on a red knoll, and the soil around is what we call "dry bog." This shows how people may be mistaken. Mr. Eisen states that figs will not flourish on adobe soil, but the finest fig orchard I have seen is above Porterville on soil that is strictly adobe. I presume that with the same climate and surroundings, the trees might do better in an alluvial soil. These trees stand as living monuments as to what may be accomplished on our treeless plains and along our foothills. I would most earnestly recommend to our farmers throughout this region to plant fig trees. Where they do not wish to engage in the culture of the trees for profit, if trees were planted along the highways and avenues it would give to the country the appearance of thrift, relieve the monotony of the parched plains, and ultimately prove to be a thing of beauty, luxury and profit. And the farmer, or better, a community, that will first start in this matter, will be first to come to the front and demonstrate in letters that all may read the possibilities of their district, because the culture of figs at no distant day is sure to become one of great profit. Houses for packing and crystallizing will follow the planting of orchards. Should the bottom ever fall out of the horticultural business of California, the man in the fig business need have no alarm, for I maintain that one can raise more hog-feed on an acre of land planted to figs than can pos-

LADIES' ETON COSTUME.

The Savior used it to illustrate that condition of the world when society would be ready to receive Christ at His second coming, for when asked concerning this matter, He said: "Now learn a parable of the fig tree; when his branches are yet tender and putteth forth

sands of California's shore, where the Orient has clasped hands with the Occident, she has made her home; and who shall say what her destiny shall be here in this sunny clime? And this is the purpose of this essay—to inquire into her habits and adaptations to our

A Well-Boring Outfit.

The picture shown above is an illustration of the latest improved rock-drilling machine for well-making purposes. It is called the Acme, and is manufactured by Messrs. Goulds & Austin, of 167-9 E. Lake street, Chicago, Ill. These gentlemen publish a complete catalogue of a very full line of well-making machinery and pumping appliances for deep wells, which they will forward to inquirers on receipt of 20 cents. In view of the importance of a permanent supply of water we think it would pay those of our friends who are interested in this question to correspond with this concern.

M. EHRET, JR., & Co., manufacturers of roofing, etc., have consolidated their business in St. Louis and Kansas City with S. D. Warren & Co., under the firm-name of the Ehret Warren Manufacturing Co. All contracts of the old firm have been purchased and assumed by their successors.

sibly be produced from any other source. As to

How Figs May be Grown

On land not subject to irrigation, I now propose to answer. Most of our large farmers have water wagons for hauling water for thrashing purposes. With a good tank and windmill, or horse-power, one man and team could water and keep in thrifty condition 40 acres of trees. Have a small depression around the tree, with a bushel of coarse manure therein; five gallons of water poured on this once in two weeks during the months of June, July and August would be sufficient to keep the trees growing, and if the second year should be a wet season, the trees would take care of themselves; but if a dry season, then the watering could be repeated the second year. After this no cultivation or attention need be given, and if the owner wants to take a trip around the world he may do so, and the trees will be none the worse for his absence, provided they are secure from the depredations of stock.

Variety.

The California purple or blue fig is the most hardy and thrifty of all former varieties, but I am told the White Adriatic is proving itself to be a very hardy and thrifty fig, and much superior to other varieties for drying. Figs of all varieties are easily propagated from cuttings, but cuttings should be planted in nursery and given good care to be sure of vigorous growth. In transplanting, a great deal of care should be used, as the roots are very sensitive to exposure, and when once removed from the soil should be planted with the greatest possible speed.

I cannot in this article speak further in detail. If the attention of the public, or any individual, may be called to the importance of the matter by this article, then good will have been accomplished. And again I would say to all in the foothill region, plant figs.

Interesting to Farmers.

The following is the result of a plow trial recently had in a field near Pixley, Tulare county, Cal.:

PIXLEY, Tulare Co., Cal., Feb. 27, 1888.

Messrs. Truman, Hooker & Co., San Francisco, Cal.—GENTLEMEN: We, the undersigned, California plowmen of Tulare county, to day witnessed a field trial between the NEW BRADLEY Square Corner Four Furrow Walking Gang Plow, "New Deal," "Stockton," and "Granger" Gang Plows on the ranch of Beel & Moore, two miles west of Pixley. We witnessed the SUPERIORITY of the BRADLEY over all others in the contest, as to lightness of draft, it running two horses lighter than the others and with much more ease in handling, and more perfect work being done. We also witnessed the superiority of its construction, it being made entirely of steel and wrought iron. It has HIGH wheels and large clearing capacity. Also your superior shaped Garden City "Q" moldboards, and the benefit of the rear wheel, causing the gang to run lighter, more steady and even than any four-gang in the field.

Yours very truly,

A. H. VESTEL, R. T. BAILEY,
J. C. WILKINS, W. M. THOMPSON,
J. A. WHITAKER, W. WILSON,
JOSEPH M. VIERRA, M. H. BAILEY,
Supt. of Ranch.

We would like to call the attention of our readers to these "Square Corner" plows, which have NEVER been beaten in a field trial. Any information in detail may be gained by addressing Messrs. Truman, Hooker & Co., 421 Market St., San Francisco.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

- FOR WEEK ENDING FEBRUARY 21, 1888.
- 378,351.—SASH-FASTENER—J. D. Axtell, Santa Barbara, Cal.
 - 378,192.—POWER MECHANISM—Geo. Cottrell, S. F.
 - 378,091.—REVOLVER—Aug. Greth, S. F.
 - 378,096.—SMOKE-CONSUMING FURNACE—John Keane, S. F.
 - 378,371.—ORE-FEEDER—E. C. Loftus, Oakland, Cal.
 - 378,344.—CONVERTING MOTION—J. H. Pemberton, Los Angeles, Cal.
 - 378,262.—THRILL COUPLING—J. W. Pendleton, Greenville, Cal.
 - 378,215.—BRAKE BLOCK—G. A. Posson, Angwin, Cal.
 - 378,221.—PROPELLER WHEEL—W. L. Strong, S. F.
 - 378,345.—CARD EXHIBITOR—W. D. Valentine, S. F.
 - 378,270.—CARD EXHIBITOR—Valentine & Bailey, S. F.
 - 378,155.—LEVER-POWER ENGINE—E. T. Wheat, Oakdale, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Treatment of Flowering Bulbs.

EDITORS PRESS:—Will some one who is successful in growing hyacinths tell me how the bulbs should be treated after flowering out of doors? Directions in florists' books usually say that they should be taken up, dried, and put away

DISTRIBUTION OF FAT AND LEAN IN POLLED ANGUS CATTLE.

in a cool place; and in this climate where the earth becomes so heated and baked during the summer months, it would seem reasonable to follow such guidance. This, however, is my experience: Some fine Dutch bulbs planted two years ago gave a very poor show of flowers the first season. Inadvertently they were left in the ground. The following spring they sent up a magnificent display, several having two and even three stalks of blossoms.

As we intended to change our residence, the bulbs were then taken up and replanted in the winter. Again the flowers are small and few in number. Now, if left in the earth must they be kept dry, or will it do simply to ignore their presence while watering other plants?

Narcissus bulbs (I may add) behaved just as did the hyacinths, resenting being transplanted by showing nothing but leaves. I. H. Danville, Cal.

[This is a good subject for our floriculturists to discuss.—EDS. PRESS.]

LUMBER IN WASHINGTON TERRITORY.—Washington Territory, on account of its wealth of forests, coal and vast stretches of fertile land, has in seven years increased in population to 144,000, almost doubling. In 17 years the number of inhabitants has increased six-fold. This population produces for the world annually 500,000,000 feet of lumber, nearly 400,000 tons of coal, 250,000 tons of wheat, nearly 5,000,000 pounds of hops, to speak of nothing else, and is now pronounced the Queen of the Pacific, excepting only California.

MIRAMONTE COLONY.—We call attention to the advertisement in this issue of the Miramonte Colony Association. This colony is in the heart of the famous artesian region of the upper San Joaquin valley. The sale of lands in the colony is in the hands of C. H. Street, late secretary of the Immigration Association, who is now associated with the real estate firm of Greenwood & De Wolf to form the firm of C. H. Street & Co.

ANOTHER car-repair shop is the latest addition to the railroad yards at East Oakland.

Choice Beef.

Acquaintance with the best kinds of food increases more rapidly than knowledge in other departments of life, as life itself depends upon food and self-preservation is the first law of nature. Yet it would seem that after a man's hunger has been satisfied his knowledge of the better kinds of food advances more slowly; for example, it took England between a quarter and a half a century to ascertain the superiority of South Down mutton, yet this lesson having been learned, we appreciate more readily the quality of the Angus beef. The time was when, if beef showed fat on the outside, we considered it good; now the question is not only how fat is it, but whether the fat is distributed through the flesh or marbled—as an American would put it in reference to bacon, we desire a streak of fat and a streak of lean.

The cut here presented shows in a marked

A New Industry for California.

As an evidence of the peculiar advantages of the climate of California for special industries, we would refer to the establishment in Santa Barbara of a manufactory for the production of instantaneous dry plates for photography. We condense the facts from the Santa Barbara Press. It appears that two photographers from Maine—C. S. Bond and J. C. Higgins—after spending considerable time in visiting different parts of the State, have finally settled upon Santa Barbara as the best point for the establishment of this new business—the first in California and which will be a leading one of the very few in the country.

The projectors say they have found that Santa Barbara possesses the greatest number of requisites—an even, equable climate, more clear, sunshiny days, a clearer, drier atmosphere, and purer water.

The Santa Barbara Dry Plate Company has been formed, composed of C. S. Bond, J. C. Higgins, C. W. Shaw and C. V. Stevens, all of Maine, but who will become residents of Santa Barbara. Mr. Higgins is an experienced photographer, and Mr. Shaw the most experienced plate-maker in the United States. The company has ample capital and the business will be pushed energetically. The company proposes to make the finest dry plates in the country and to extend their business all over the United States, and they expect to make the new "Santa Barbara Dry Plate" a household word with photographers everywhere.

At the outset the company will employ from eight to a dozen men and will start with a capacity of \$10,000 to \$15,000 worth of dry plates per month. This will be increased as the business grows, and the plant will be enlarged as rapidly as necessary.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING and SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

LITTLE'S CHEMICAL FLUID NON-POISONOUS

SHEEP DIP.

One gallon, mixed with 60 gallons of cold water, will dip thoroughly 180 sheep, at a cost of 1 cent each. Easily applied; a nourisher of Wool; a certain cure for SCAB. Also,

LITTLE'S PATENT POWDER DIP. (POISONOUS.)

Mixes instantly with water. Prevents the fly from striking. In a 2 pound package there is sufficient to dip twenty sheep, and in a 7-pound package there is sufficient to dip one hundred sheep.

NOBEL'S DYNAMITE, NOBEL'S EXPLOSIVE GELATINE, NOBEL'S GELATINE-DYNAMITE,
Best and Strongest Explosives in the World.

As other makers IMITATE our Giant Powder, so do they Judson, by Manufacturing a second-grade, inferior to Judson.

BANDMANN, NIELSEN & CO., General Agents, San Francisco.

JUDSON POWDER,

The Only Reliable and Efficient Powder
For Stump and Bank Blasting. From 5 to 20 pounds blows any Stump, Tree or Root clear out of ground at less cost than grubbing. Railroaders and Farmers use no other.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOEBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,

DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

Dr. J. KOEBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the **MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or**

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Patented Jan. 23d, 1883.

For Sale by all Wholesale and Retail Dealers.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equaled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

PROPERTY FOR SALE.

An English gentleman, compelled to remain abroad for some years, has decided to sell the following properties owned by him: Forty acres, with all farming implements, horses, cows, poultry, farming tools, buggies, wagons, house (ten rooms) fully furnished, barns and out offices. This property is in

SANTA CLARA VALLEY,

Quite convenient to San Francisco. Depot S. P. R. R. adjoins the property. Also, 640 acres in San Luis Obispo, near Paso Robles.

This property must be sold at once. Full particulars from

DR. W. HADDEN,

AGNEW, SANTA CLARA CO., CAL.

GREAT JOINT PUBLIC SALE OF IMPORTED FRENCH DRAFT STALLIONS and POLLED ANGUS CATTLE

To be held at Bay District Park, San Francisco, Cal., on
Wednesday, March 7, 1888.

I will sell at public auction, on above date, ten head of choice Imported French Draft Stallions. These horses are of the same quality as I have shipped to this State for the past ten years, and the satisfaction which my previous sales have given is sufficient guarantee to the public for the future.

JAMES A. PERRY,
Riverview Stock Farm,
Wilmington, Ill.

At above time and place I will offer twenty-five head of choice Thoroughbred Registered Polled Angus Cattle, consisting of Bulls and Cows, being a selection from my herd, which has been awarded more Premiums at the Fairs and Shows in the East than any other herd in the United States. Parties desiring the best bred breed will do well to inspect this offering, which has recently been shown on the streets of San Francisco, and attracted so much attention.

A. B. MATTHEWS,
Kansas City, Mo.

For Catalogues and particulars address either of the above owners at the Russ House, SAN FRANCISCO.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, etc.,

—WITH—
Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price 24, postpaid. For sale by DEWEY & Co., publishers, 220 Market St., San Francisco.

Don't forget the sale of imported Norman draft stallions and Polled Angus cattle at the Bay District track Wednesday, March 7th, at 1 P. M. Such a combination of thoroughbred stock has perhaps never been seen at one sale on the peninsula.

GOULD'S SPRAY PUMP

—WITH—

Bamboo Extension all fitted up,
Complete with Hose, Barrel
and Spray Nozzle.

This cut shows in faithful operation our Gould's Spray Pump; they are utilized for spraying Fruit Trees, Orange Groves, Vines, and in fact, all trees or shrubbery infested with the destructive insects which infest and do so much injury in Orchards, Vineyards, Orange Groves, etc. They are made entirely of brass, with the exception of frame and handle, and are strong and heavy; the valves being made entirely of metal, will not be affected by the corrosive solutions such as Caustic Soda, Acids, Lye, or any other solution that may be used to kill the destructive insect.

NOTICE.—Ongerth's Liquid Tree Protector is the best Spray for killing Red Scale, Black Scale, White Cushion Cottony Scale, San Jose Scale, or any other insect.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Raising a large proportion of my seed enables me to warrant its freshness and purity, as see my Vegetable and Flower Seed Catalogue for 1888, FREE for every son and daughter of Adam. It is liberally illustrated with engravings made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Cory Corn, and a score of other valuable vegetables, I invite the patronage of the public.

SEE-SAW CULTIVATOR.

The Best Vineyard Implement in Existence.

IT IS ALL IRON AND STEEL, NO WOOD, EXCEPT POLE.

All the shovels are in front of the wheels, so that all the work is done in full view of the driver.

It is the only Cultivator that is a perfect side-hill machine. With all others you are compelled to work your team up hill continually, and cause your cultivating to be done in a slanting, awkward fashion, distressing to driver and team. We have done away with all this; simply use the lever to the right of driver's seat and throw the wheels toward the hillside. This gives the machine a tendency "up hill," but does not alter in the slightest the direction of the sulky frame or pole, so your team can travel along without the annoyance consequent upon side draft, and the hauling and dragging on the reins by the driver.

The machine is simply PERFECT. It is expensively made and great care has been used in its manufacture.

PRICES: 4-ft., \$50; 5-ft., \$55; 6-ft., \$60. Weight, 325 lbs.

Send for circulars and prices on our HAVANA PRESS DRILL. By its use you will be assured of an excellent crop, whether it rains or not. We are getting new testimonials every day on our NEW BRADLEY SQUARE CORNER GANG and SULKY PLOWS. They cannot be excelled for LIGHTNESS OF DRAFT, SUPERIORITY IN QUALITY and CHEAPNESS. It is the ONLY PERFECT Gang Plow made that will Turn a Square Corner.

We have the finest Carriage Repository on the Pacific Coast. Agents for David Bradley Manufacturing Co. A full stock of Garden City Plows, Harrows and Cultivators on hand; also a full line of extras. Agents for the celebrated Milburn Hollow Iron Axle Wagon, McCormick Mowers, Reapers and Twine Binders, and Randolph Headers. If you have not our Catalogue, send for it. Mailed free to any address. A Grand Shire Stallion.

As this is the week for the annual stallion show at Livermore, we symbolize the occasion by giving on this page a portrait of one of the grandest animals ever brought to this country—the English Shire stallion Blyth Ben, imported in 1886 by Galbraith Bros. of Janesville, Wisconsin. Blyth Ben was then a three-year-old, having been foaled in 1883. He was bred by J. Osborn Daintree of Cambridgeshire, England, and is by Kempston (3163), a son of Emperor 2d (2769) and out of a mare by Thumper (2136), a son of Waxwork (1298). Blyth Ben is a steel gray, and adding this point of color to the majestic proportions, as sketched by the artist, one can easily form a conception of the animal. Before leaving England, Blyth Ben won the first prize for three-year-olds, and sweepstakes for best stallion of any age in the Shire Horse Society's show. The year of his arrival in this country he also won the first award as a three-year-old in the Shire class at the Illinois State Fair; also the first at the American Horse Show held in Chicago in 1886. He also won first prize and sweepstakes gold medal at the Interstate Fair held at Madison, Wis., against all ages and breeds, first at Wisconsin State Fair, held at Milwaukee, and first at the Minnesota State Fair. Galbraith Bros. are entitled to much credit for bringing such an animal into the country.

In our issue of January 7th we gave a sketch of the points of value in the Shire horses, and we need not repeat them at this time. The breed seems to be gaining ground rapidly at the East, and has already scored some good points in California.

We would advise all those who desire to see a fine string of horses to go to Livermore on Saturday of this week, March 10th. The area open to entry this year has been extended, and it is likely that a larger display of horses will be made than ever before. The annual show at Livermore has grown rapidly from small beginnings, until it now attracts attention from distant parts of the State. If it continues it will be one of the notable events of the agricultural calendar. There should be local stallion shows in all our farming centers. They give the owners of fine horses a chance to show them to a large number of interested people and they furnish the breeder an opportunity of comparing breeds and individual sires, which is of much

value in selecting for specific purposes. Our farmers in all lines of production should go about more to gather hints for progress and improvements. A good place to begin such profitable trips will be at Livermore on Saturday of this week.

THE SUTTER CANNERY.—The experience of the cannery at Yuba City this last year should be suggestive to fruit-growers in all progressive localities. We are informed that the entire

THE FRUIT UNION.—The directors of the California Fruit Union have been in session this week, and have been giving considerable time to discussion of policies and measures. The election of officers for the ensuing year was had with the following result: President, P. E. Platt of Sacramento; Eastern Manager, A. T. Hatch; Vice-President and General Manager, L. W. Buck; Treasurer, National Bank of D. O. Mills & Co., Sacramento; Secretary, H. A. Fairbank. The new president, Mr. Platt, is too

The Trust Abomination.

We are glad to see that the New York State Senate Committee was not bribed or bulldozed out of its conscience by the trust conspirators of New York City. The telegraphed reports showed that great pressure was being brought to bear upon them, and that prominent citizens (who have interests in trusts) did not fail to come forward and declare in effect that their organizations were so beneficial that the organ-

izers ought to have medals from the Humane Society or the Home Missionary Society. But this sort of evidence does not seem to have had much weight with the legislators of the Empire State, for the telegraph announces that their report to the Senate on Tuesday of this week contains the following paragraph:

However different the influence which gives rise to this combinations may be, the main purpose of the management and the effect of all of them upon the public is the same, to-wit: The aggregation of capital, the power of controlling manufacture, and the output of various necessary commodities; acquisition and destruction of competitive properties, all leading to the final and conclusive purposes of annihilating competition, and enabling such combinations to fix the price at which they would purchase raw material from producers, and at which they would sell the refined product to the consumer. In any event, the public at each end of the industry, the producer

and the consumer, is and is intended to be, in a certain sense, at the mercy of the syndicate, combination or trust.

The report recommends new legislation, and that the Attorney-General proceed against any violation of the laws. The committee investigated the sugar, milk, rubber, cotton-seed oil, butchers, glass and furniture trusts. It recommends that the Attorney General take steps to forfeit the charter of the Milk Exchange, which is declared to be a monopoly of the worst sort. A bill will be reported soon which the committee believes will modify, if it does not prevent, the greater evils complained of.

Thus New York seems to have taken a strong hold on the trust monster, and we hope it will shake the life out of it. It is a good place for the movement to start, for we imagine many of the trusts have New York charters. Now Congress should take a hint from New York, and give us a report, and, if possible, an enactment, which will check this most alarming form of the monopolistic tendency of the day. It will be a hard thing to crush out.

IMPORTED ENGLISH SHIRE STALLION BLYTH BEN.

pack for the past season has been sold at satisfactory prices. A shipment was made to Chicago on Tuesday of 90,000 pounds of canned goods, which exhausted the stock. The pack of this cannery has been in great demand, as the principle was adopted from the beginning of putting up nothing but first-class fruit. The benefit of this policy was seen immediately, for we heard it in the air months ago that the best fruit of the year was from the Sutter county cannery. There is abundant chance to emulate this, and now that the canning outlook is so fine there should be quite a number of local canneries started. If the principle be adopted and strictly adhered to that nothing but the best fruit fresh from the trees be put in the cans, there is no question about success, if the management be good as well as the fruit.

THE INYO PAPERS complain that maps lately published contain the names of pioneer towns that passed out of sight 20 years ago, and that they are very incorrect as regards both Inyo and Mono counties.

well known to most of our readers to need introduction. He is a member of the firm of W. R. Strong & Co. of Sacramento, who have for years been prominent in fruit-shipping. He is a man of exceptional executive ability, of tireless energy, gentlemanly in his bearing, and, as these qualities might indicate, esteemed and popular. It is rather hard to banish Mr. Hatch from the State after his term of arduous service, but to give him a chance to proclaim a little of his faith in California at the East will be a good thing for the State. There bids fair to be plenty for the Fruit Union to do this year, and we hope all arrangements will tend to move the fruit freely and successfully.

WYOMING STOCKMEN are happy. From all quarters come reports that losses have been very small. Three inches of snow within as many days the first of the week moistened grass roots in the neighborhood of Cheyenne. In the Big Horn basin a loss of less than one per cent is reported. On the Platte, Laramie and Cheyenne rivers the outlook is favorable. Sheep have wintered well.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Nevada County.

EDITORS PRESS:—Nevada county lies north of the central line of the State of California, extending from the summit of the Sierras on the east line of the State to the Sacramento valley on the west, a distance of 70 miles, with a width varying from 12 to 20 miles. The altitude in the western or valley region is less than 1000 feet, 2000 to 3000 feet along the central portion, with 8000 feet along the eastern boundary.

The line of the overland railway crosses the eastern boundary and traverses the southern portion for many miles. It then enters Placer county, but continues close to the southern boundary of Nevada till near its western limit. The Nevada county narrow-gauge railway connects with the overland road at Colfax, and extends thence north through the center of the county via Grass Valley and terminating at Nevada City, but two hours' ride from Colfax. The eastern portion of the county being mountainous, the principal industries are lumber and grazing. In the central are the quartz, hydraulic and placer mines, with the northern horticultural belt. The western or foothill portion consists of agricultural and grazing lands. The portion of the county adapted to horticultural and agricultural pursuits contains 250,000 acres.

Character of the Soils.

The soils are as varied as could be desired. In the neighborhood of Nevada City the granite crops and the soil is largely granite with alluvial surface, similar to the fruit soils of Placer county. At Grass Valley are the loamy hillsides tinged a dull red. Another variety is that of the slate districts, famous for its fine grapes. Scattered throughout the county are old river-beds composed of rounded boulders and loose rock, a character of soil unavailing in appearance, but once tried, proven the most profitable in fruit culture.

Climate.

As there is as yet no need of selling the climate in Nevada county, a word in reference to the same may not be amiss. The altitude of the county's agricultural lands being from 1000 to 3000 feet above sea level, effectually bars out all the malarial, fever-and-ague conditions of the lower counties. The absence of fogs and raw sea breezes, with cool nights inviting refreshing sleep and an ever-present inexhaustible supply of pure, cold spring water, makes life worth living, and the combined effects are everywhere seen in the hearty, healthy, happy children.

In Nevada as in all portions of the State, the climate is governed by the topography. While doubting Thomases may sneer at this, the fact remains, and one of the best evidences is the admitted fact that the earliest fruits in the State are those raised in these so-called northern counties. The critical month of the year for fruit being March, a comparative table shows that the average of the minimum temperature for that month was—Santa Barbara, 43.4; Riverside, 40.6; Grass Valley, 35.1. Bear in mind the fact that Grass Valley is 2400 feet above the sea level, and does not represent the temperature of lower and warmer portions of the county. Nearly one-half of the agricultural portion of the county from a few miles west of Grass Valley to where the hills slope rapidly to the westward is contained in the "warm belt," where no snow falls and frosts are never severe.

The rainfall is principally in the winter months, very little rain falling during July, August and September. In consequence, irrigation is resorted to, though many have proven that in this county cultivation can be made to supply the want of irrigation. It was the writer's pleasure to visit the nursery of Grass Valley's genial, progressive horticulturist and nurseryman, J. T. Rhodda; and while going over his grounds, Mr. Rhodda pointed with justifiable pride to his Bartlett-pear orchard of 1400 trees, set out on hitherto considered waste land. All of these trees showed a grand growth, and they had received no water. This is no exception, as lands on which are thrifty orchards, vineyards and vegetable gardens are located above the line of any ditch, and hence settle the question beyond controversy that profitable crops can be raised without irrigation. When it is desired to irrigate, these soils require but a fraction of the water used in other portions of the State. Thanks to her mineral wealth, Nevada county has a system of reservoirs and ditches not excelled in any portion of the State, and in consequence water is not measured out as though golden, but turned on freely and fully when wanted.

The Reservoirs

Are as follows:

	Cubic feet.
North Bloomfield Co.	1,050,000,000
Milton Co.	650,000,000
Eureka Lake Co.	1,130,000,000
Yuba W. & M. Co.	1,800,000,000
Omega & Blue Tent.	300,000,000

The South Yuba alone can supply 109,368,000 gallons daily. As San Francisco's source of supply can furnish but 12,000,000 gallons, or one-ninth the amount, some idea can be gained of the immense water supply available by com-

parison. Now that the courts have perpetually enjoined the hydraulic mines (for the use of which this water was originally brought in, at a cost of \$4,823,762), almost the entire amount is available for irrigation, and this coming season Placer county will secure a portion of the water to supply their ditches from Nevada's reservoirs.

Fruits of the County.

While the orange is grown successfully, as was shown by the exhibit accompanying Placer's citrus display at Los Angeles, the more practiced and reliable horticulturists recommend first the Bartlett pear, as this is its natural home, and nowhere does it attain so great perfection. Next to it in grade range the prune, Tokay grape, with its red mountain-given cheek, and the Picepturiens English walnut. While apples reach perfection here, the woolly aphid and codlin moth make it here, as elsewhere, a hazardous crop. The peach, cherry, apricot, and citrus fruits do equally as well in selected localities as in other counties.

That the soil and climate are both adapted to fruit is evidenced everywhere, but nowhere more than on the "Barren Hill Nursery" of the well-known Mr. Felix Gillet of Nevada City. This soil, so poor, seemingly, that Mr. Gillet turned the few inches of alluvial soil under for the roots, and brought to the surface the almost white granite soil that covers his nursery and makes it look like a well-kept gravelled walk, grows the finest, thriftiest trees that it has ever been my pleasure to examine, and in bearing qualities the soil or location is fully equal. Nevada county has much to be thankful for, but in the person of Mr. Felix Gillet she recognizes her greatest possession, honest, thorough, practical, a representative horticulturist, and enthusiastic in his work. Through him Nevada county is well known, especially in nut culture, which is Mr. Gillet's specialty, and for which he holds the first prize of our State Fair for "best exhibits of nuts."

Price of Lands.

Within five miles of railway communication, lands under good state of cultivation can be purchased for from \$10 to \$30 an acre, while wild lands can be bought from \$5 to \$10 an acre. Government lands are still open for settlement, and railroad lands for purchase at prices ranging from \$2 to \$5 an acre.

The schools, churches, banks, hotels and business-houses of the county are second to no county of like population, while the society is all that could be desired. Her mineral wealth is well known, the Idaho mine of Grass Valley alone having yielded over \$10,000,000 to date.

To reach Nevada county, intending visitors should purchase tickets to Colfax and then take the Nevada County railway to Nevada City, where the officers of the Nevada County Land and Improvement Co. will extend to them every courtesy. This company is composed of the leading men of the county, not merely as a real estate firm, but working to settle and build up Nevada county in every honorable way, and to them the writer is indebted for a large amount of valuable information as to the county's possessions and capacities.

Murphy, Cal.

SHEEP AND WOOL.

Sheep-License in Lassen.

The supervisors of Lassen county, at a regular meeting held Feb. 10th, passed without a dissenting voice an ordinance of which the following are extracts:

SEC. 1. Every person engaged in the business of raising, grazing, herding or pasturing sheep in the county of Lassen, State of California, must annually procure a license therefor from the tax-collector, and make therefor the following payments:

First.—Those owning or having in their possession and under their control 5000 sheep or more, shall constitute the first class and must pay \$100 per annum for the first 5000 sheep, and for every additional 1000 sheep the sum of \$20.

Second.—Those owning or having in their possession and under their control 4000 sheep and less than 5000, constitute the second class, and must pay \$80 per annum.

Third.—Those owning or having in their possession and under their control 3000 sheep and less than 4000, constitute the third class and must pay \$60 per annum.

Fourth.—Those owning or having in their possession and under their control 2000 sheep and less than 3000, shall constitute the fourth class and must pay \$40 per annum.

Fifth.—Those owning or having in their possession and under their control 1500 sheep and less than 2000, constitute the fifth class and must pay \$30 per annum.

Sixth.—Those owning or having in their possession and under their control 1000 sheep and less than 1500, shall constitute the sixth class, and must pay \$20 per annum.

Seventh.—Those owning or having in their possession and under their control more than 500 sheep and less than 1000 shall constitute the seventh class, and shall pay \$10 per annum.

Eighth.—Those owning or having in their possession or under their control 100 sheep and less than 500 shall constitute the eighth class, and must pay \$5 per annum.

Ninth.—Those owning or having in their possession and under their control less than

100 sheep shall constitute the ninth class, and must pay 50 cents per annum.

Sec. 2. Every person who shall engage in the business of raising, grazing, herding, or pasturing sheep, or be so engaged within the county of Lassen, State of California, without first obtaining a license therefor, as prescribed by Section 1 of this ordinance, is guilty of a misdemeanor.

Sec. 3. The tax-collector shall be the collector of the license provided for by this ordinance, and it is hereby made his duty to collect the same, and he may enforce the collection as provided by Section 3360 of the Political Code of the State of California.

Sec. 7. This ordinance shall take effect and be in force on and after the first day of July, 1888, and all ordinances or parts of ordinances in conflict herewith are hereby repealed.

THE STABLE.

Raise the Weights.

If we had our way about the matter the present weights carried in running races would be raised from 15 to 20 pounds all around. The present scale is ridiculously light when we consider the qualities we ought to have in our fast stock. Racing is nominally for the improvement of the horseflesh of a country. If this is true, and the whole business is not a mere amusement or gambling machine, do let us really improve our stock to some practical end.

While we recognize that this is not the age of the sailing packet and the stage-coach, and that time is coin as it never was before, we would still like to see more interest taken in the class of racing that laid the foundation for the great advance that has been made in later years. In the older time, whatever other faults that age had, they certainly put the great quality of endurance in a position far nearer the place it deserves to have than the racing world of the last 15 years has done. In fact, the racing breeders of from 20 to 30 years ago built so well on the magnificent foundation received from the hands of the British lovers of the running horse that much of their work still remains intact, uninjured by the craft and assaults of the senseless fashion of turning horses into deer or greyhounds; for outside of their value as racing machines, many strains of our running blood are positively worthless for any practical use. Leggy hot-house grown weeds, without stamina or constitution, whose one gift is the power to cover three-quarters of a mile carrying a feather-weight jockey at top speed—and then shut up. That is not the stock that makes a nation's cavalry worth its feed. What we want is a type of horse that at four years of age can shoulder 140 or 150 pounds and cover a mile anywhere under two minutes, two miles well inside of four minutes, three miles in six, and four miles in eight minutes—with a few seconds leeway at this last distance, if needed, although we are sure that the above distances could be made in far better time than given by representatives of many of our racing families that still keep some of their old-fashioned stamina and weight-carrying capacity. And the additional weight would not be entirely a hindrance; for with a scale some 20 pounds heavier than at present, dozens of our best riders who are now barred because they have been foolish enough to follow Nature's lead and grow a little, could again straddle their favorites; and the average riding ability would be far higher than it is at present, when a man hardly learns the business before he must either quit or ruin his health by all sorts of hurtful ways of preventing natural growth and development.

Then much of the riding would be taken out of the hands of the feather brained little dare devils and put into the care of men who would not only have some regard for life and limb, but who would be able to ride a racehorse as such a noble animal deserves to be ridden, steadying his mouth skillfully, carefully judging the pace and finishing with plenty of reserve strength and energy. Our races would cause the death of far fewer boys and horses and would be much finer exhibitions of stamina in the horse and pluck and judgment in the rider under a scale of weight that would train us up cavalry and artillery horses such as the world has never seen.

—G. T., in San Leandro Reporter.

A San Benito Breeder's Views.

H. De Groat writes to the Hollister Free Lance as follows: The main and leading principles in breeding should be in selecting a sire and dam of fine form, sound constitution and free from all hereditary diseases and blemishes, and in the vigor of life. Avoid broken-down stallions, for where the constitution and limbs are impaired from old age and long use, there is not vitality enough to support the original form or action. Don't expect a perfect animal from such a source; don't look for as great a feat in your old age as could be accomplished in your younger days. All rules of nature say, "like begets like," and if you want to raise cripples breed to cripples. But if you wish to breed first-class animals you must not breed from those that are destitute of form and so old that they have lost both action and form, for

without vitality you need not look for perfection.

It is a law of physiology and a generally admitted fact by breeders and all authorities upon the subject of breeding, that to improve any blood, the sire must be the superior animal. Therefore, if your breeders would breed the highest type of the equine species, either the racer, trotter, or horses for all purposes, recourse must be had to the thoroughbred horses that have action and endurance, horses that have proven their worth by their deeds—horses of sound constitution—and if such sires are chosen, they must and will succeed. It is highly amusing to one at all familiar with the stock of the country to read the advertisements of the modern trotting stallions, all or nearly all claiming to be descendants and inbred from Messenger. What Messenger do you suppose they mean? Why, imported Messenger, the racer, who died Jan. 23, 1808, 80 years ago. There is not a horse in the United States that has one-sixteenth part of the blood of old imported Messenger in his veins. Why will breeders seek this peculiar strain if so desirable, adulterated as it is by the common horse of the country, when it can be found so pure and rich in the thoroughbred? Old Messenger was a racehorse and thoroughbred. The common horses of the country, as a class, are without beauty and finish, with big, ugly heads, coarse limbs, curly hocks, big feet, upright pasterns, and no heart to stay a distance of ground. Look around you. Is not this a true picture of the majority of the trotting stallions candidates for your patronage? If I desired this strain I would go to the thoroughbred, where I would find clear limbs, beautiful head and neck, long, elastic, and springing pasterns, and a heart to compass 20 miles an hour. The thoroughbred cross is classed as more directly pure, better, more desirable, because more reliable than those obtained through the coarse, sponge-boned, flat-footed, faint-hearted stallions advertised throughout the country as being descendants of "Imported Messenger." I would as soon expect to get the Messenger cross through these mongrel candidates for public patronage as to pour a barrel of whisky in the headwaters of the Sacramento river and drink good grog from the Bay of San Francisco.

HORTICULTURE.

A German Comment Upon Our Horticulture.

EDITORS PRESS:—I think it interesting and very pleasing to California farmers to see that exact views about the future of our country commence to spread abroad, and thus I send you this translation from the *Trierischer Landbote*, February 3, 1888.—F. CLOSS, Auburn, Cal.

The following notes may serve to give an idea about the extension of the vineyards and orchards in California. The figures are taken from official statistics. It ought to be mentioned particularly that fruit and viticulture in California so far are yet in their infancy; not even the thousandth part of the area prominently adapted for the mentioned branches of agriculture is cultivated. The fruit industry also, comprehending the curing, drying, canning of all kinds of fruits and the changing of them in other ways, is only in its commencement. Not less so the vine trade, in spite of the really astonishing progress which this very branch shows even now in comparison to other countries. With the increasing of the products of California the market of them in the trade of the world will be considerably enlarged also. The canneries founded in that country are not able to cover the demand only approximately, though they are remarkably enlarged and work with all possible force. The fruits of California replace (supplant) even now the products of all other countries in the trade of the world, and before a few years pass they will govern the world. These are not any of the vain-glorious praises which used to be told for years about the Golden West, but it answers perfectly to the observations and inquiries made in the very State. The future of California lies in her fruit and vine products; this is a conviction justified by facts, which enforces itself to every thinking man.

At the conclusion of the year 1886 there were in the State more than 100,000,000 vines, and more than (over) 8,000,000 fruit trees. The viticulture yielded 18,500,000 pounds of raisins; the fruit culture 2,000,000 dried plums; 22,500,000 pounds of fresh oranges and lemons were shipped to the East. The fresh, canned and dried fruits amount to 99,025,000 pounds besides that what is used up in the State itself.

The view that an overproduction of fruits is to be feared is entirely without reason. Years ago the very same was said. A glance at the lists of the import in the United States teaches that in the average the following quantities are imported: 50,000,000 pounds dried plums, 7,000,000 pounds figs, 54,000,000 raisins, 5,000,000 pounds almonds, 396,000,000 pounds oranges and lemons, 5,000,000 pounds of other fruit; altogether about 541,000,000 pounds besides olives and wine.

California exports so far 99,000,000 of fruits while the import in the United States amounts to 541,000,000 pounds. Therefore, if only the United States shall be supplied by California, the production must be six times larger than it is now; with this the export to other countries

and the increasing of the population is not even considered.

By these notes it is clear that the fruit culture in California is on an entirely sound foundation, more than that, the views for a truly splendid future are perfectly justified. But the fruit industry and the market of fresh fruits must keep in the line with the increased cultivation and production. This branch, however, being in the hands of experienced and far-seeing business men of ample capital, no danger from this side is to be feared. To the fruit and viticulture of the State belongs the future.

Small Fruits in Florida.

EDITORS PRESS:—This place is destined to become, if it is not already, the leading strawberry-growing point in the State. We have about 115 acres here, not all good, however—say about 90 acres of fine plants which will yield a crop above the average of Florida. There is so much exaggeration in the papers that it is impossible to arrive at the correct acreage at other points; but from information derived from private parties I believe that Gainesville, Bartow and Orange Park are our principal competitors, with an acreage of about 50 or 60 each.

Bartow and Gainesville, being south of us, heat us a few days or weeks in early shipments, but the few crates they are able to send North in advance of us amount to more in glory than in cash. One of the most remarkable things about the Florida strawberry is the great length of time during which the ripening season is prolonged. For this reason the oncoming of berries is very gradual, and, though our southern competitors may send a few berries to New York a month or six weeks ahead of us during the main shipping season—March and April—we keep fully abreast of them, and at the end of it we will not shrink from a comparison of books.

The soil here is peculiarly adapted to strawberries. It is not high pine and is only slightly rolling, being what the natives call "flat-woods," that is, a pine forest with many small cypress swamps, locally called "bays," interspersed. There is a large percentage of humus or vegetable mold in the sand, making it black, rendering the roads firm the year round and making necessary a system of surface drains. It is asserted that Lawley has 14 miles of these drains. Vast sheets of water stand in the woods in the summer "rainy season," still we are singularly free from fevers the year round. There is no drifting sand, and the native grass, though almost as coarse and harsh as pine straw, is cut in the piney woods with mowing machines at the rate of a ton per acre for strawberry mulch. It is this characteristic of the soil, its retentiveness of water, which gives us our chief point of superiority over other towns in strawberry-growing. On high pine land, 20 minutes after the hardest rain, the water is all gone out of sight. Here it runs along or lingers in the drains for hours, black as ink.

Florida has four seasons, the rainy season of midsummer, the two dry seasons of autumn and spring, and the moist season of winter. In the summer it is very difficult to get a "stand" of strawberry plants, owing to the tremendous beating rains. Then comes on the fall drouth, and in light sand the newly set plants are likely to perish. Last fall there was a drier season than usual, and our southern neighbors, Gainesville, Ocala, Bartow and others, suffered the loss not only of their young plants, but many even of the old ones. So our prospects are unusually good at present.

The first small shipments this year were made fully a month ago. Last Saturday, Feb. 18th, we shipped a few quarts over five bushels from this station. From this you will see that the berries are coming on slowly. Last year the writer made his first shipment Feb. 26th; in the first week we shipped 8 bushels; in the second week, 28 bushels. The berries came on with a rush last year.

A few quarts were sold in New York at \$3 a quart; but the most of them have brought only \$1.50 or \$1.25 a quart. Boston and New York are at present much better markets than Philadelphia. One of our citizens sent eight pints by mail to Chicago, each pint very carefully selected and packed in cotton, and they arrived in time for a "swell" wedding, bringing the fortunate grower a check for \$40. Ten dollars a quart ought to satisfy a horny-handed son of toil.

The first crop of strawberries grown here was marketed in the spring of 1884 and netted the modest sum of \$175, about 25 cents a quart. Last spring there were shipped to northern cities 122,000 quarts, netting about 16 cents a quart, or a total of about \$19,000. This spring we expect to sell \$25,000 or \$30,000 worth.

These small early shipments are sent by express in slatted bushel-crates and carry well even to Boston. This mode of shipment is safe up to April 20th or 25th if the berries are picked when pale red and not too many crates put into a car. But all large shipments have to be sent in refrigerator cars, at an expense of 8 to 10 cents a quart to New York; by express the cost is only about 6 or 5½ cents to Philadelphia. S. POWERS.

Lawley, Bradford Co., Fla.

A SINGULAR ERROR is the use of the word "cocoa-nut," which, botanical authorities agree, should be "coco-nut." The wrong spelling is charged upon Dr. Johnson, who is said to have confused the "coco-nut" with "cocoa," which is the product of the cocoa tree.

THE IRRIGATOR.

Developing Water in a Dry River.

Eastern people have passed the joke upon California that its rivers are turned upside down; that the rivers have the gravel on top and the water underneath, and have cited it as an obstacle to the development of the water supply of Southern California. Citizens who are handling real-estate enterprises have of late declared their intention of turning the rivers right side up, to wit: water on top and gravel underneath. As illustrative of this is the great submarine dam at San Fernando. The waters coming from the mountains, as they enter upon the valley, sink into the gravel and run along the bedrock. The San Fernando Land and Water Company about a year ago planned to construct a submarine dam across the Pacoima wash down to bedrock, so as to shut off the submarine flow that evidently was there. The enterprise is now complete, all but a space of 50 feet, and for the past 10 days the struggle has been a hard one to gain the mastery over the intruding waters from the large gravel deposit lying above the dam. The dam being complete, all except the portion named, the force of the entire subterranean flow concentrated itself at that point. To overcome this difficulty three centrifugal pumps of powerful capacity were set at work, and, running night and day, the water was reduced to within four or five feet; then, with all the steam-power that could be brought to bear, it remained in even balance until day before yesterday, when the water yielded and the bedrock was at last reached. So close was the contest that the slipping of a pulley or the stopping of a pump for even two minutes would result in the water rising so rapidly that the men would have to climb up on the framework and wait until the pumps had started up. At one time the water raised so rapidly while the pumps were stopped that it covered the pumps six feet under, and the men were obliged to dive to get the pumps above the surface. The determination of the river was to retain its former position, the bed on top and the water below, but with steam-power, assisted by scientific machinery, it has been brought to its proper position.

Yesterday a *Times* reporter paid a visit to the dam, and was granted the privilege of visiting the works now in progress. The dam is situated about two miles due north of San Fernando, and, as stated, is constructed across Pacoima canyon. On the east side of the canyon, croppings of the bedrock may be seen, and it was this fact that determined Judge R. M. Widney, the originator and projector of the scheme, to build the dam at this point. An excavation of 50 feet was made on this side of the canyon before bedrock was reached, the walls of the same being securely sided, and the work of building a cement section two feet wide by 50 in length was commenced. On either side of this wall was securely packed cemented bowlders of two feet in thickness, making a water-tight dam of six feet in width by 50 feet in height. On the west bank of the river was constructed a similar section, it being thought advisable to build the dam higher on the sides, as the tendency of the stream, in cases of high water, is to wash in on the banks, and the result now will be to concentrate its force toward the center of the dam, which, being built to a lower elevation above the surface than the sides, will allow the water to pass over.

The dam is about 600 feet long, and situated about midway is built a well, reaching from the bedrock to the surface of the dam. In this is situated a pipe main two feet in diameter, which extends to within three feet of the bedrock. Throughout the length of the dam, at certain intervals, are located layers of concrete pipe, so situated as to catch the seepage from the gravel deposits above, and the water is thus allowed to flow into the well, and is then carried through the main to the receiving reservoir in the valley below.

Near the west bank is situated another well, which will perform the same functions as the one above described.

The water passing through the immense gravel deposits has the advantage of a thorough filterage, and the water at no time has a chance to stand and become foul, through the thorough system which is employed.

The subterranean river now flowing down the Pacoima canyon has been calculated to be 500 feet wide and 15 feet deep at the lowest season of the year. It is now over 20 feet deep. The wells will be sealed water-tight at a distance of about 15 feet from the top of the dam, so that in case of flood, the wells will fill from that point to the surface, from thence passing over the embankment and allowed to escape.

At the time of the reporter's visit yesterday three pumps were found at work, discharging 36,000 gallons per minute, thus showing the flow of water that can be obtained, and the difficulties that have attended the undertaking in keeping the bedrock and the coffer-dams constructed above free, that the men may complete their work.

The water thus obtained at the dam will be carried to a reservoir situated about a mile from the town of San Fernando, from which distributing point the valley will receive ample supply both for irrigating and domestic purposes. About 20 miles of mains have been laid,

the new town of Pacoima at present receiving its water supply from this source. A pressure of about 60 feet will be obtained in the valley below.

The cost of the undertaking will be about \$30,000. Fully 1000 barrels of Portland cement have been consumed in the construction—more than would be necessary in the erection of any four-story structure in this city. It is expected that the dam will be completed in about 10 days.

The gentlemen composing the company are Judge R. M. Widney and H. L. Macneil of Los Angeles, Chas. Maclay of San Fernando, Geo. C. Hager of Orange and J. K. Alexander, Superior Judge of Monterey county. — *L. A. Times*.

THE APIARY.

The Bee in Southern California.

The *Los Angeles Times* gives the following interesting sketch: The honey-bee was introduced into Southern California in March, 1855, by Mr. O. W. Childs, who purchased a few colonies in San Francisco, paying \$100 per colony for them at that port. Under his care and management the bees multiplied and produced large quantities of comb-honey, which he sold readily at \$1 per pound. His success started a boom in the bee business, and in three years afterward nearly every American resident in Los Angeles county had bees to sell, but the price was a shade lower than that paid by Mr. Childs in San Francisco, for many were anxious to sell their bees at \$5 per colony. The price of honey had gone down to 15 cents per pound. Swarms of bees had escaped from the apiaries and located in hollow trees, clefts in the rocks, and holes in the ground, so that the land was literally flowing with honey. About this time the fruit-growers began to complain that bees destroyed fruit, and most of the bees were removed to a distance from the city and located in the foothills, and at favorable spots along the foot and sides of the mountains. In their new homes the bees produced a better quality and a much greater quantity of honey, found in the bloom of the black and white sages that abound in the hilly and mountainous regions, besides the nectar-yielding, indigenous shrubs and plants so abundant in Southern California in those days.

From 400 to 500 pounds of honey per hive was considered a fair yield, and as the quantity of honey increased the price decreased, so that four and five cents per pound was about all that good honey would command. Most of the honey was shipped by sea to foreign countries. A small quantity found a market in New York. The crop of honey in 1876 was enormous, thousands of tons being gathered in Los Angeles county alone, and equally large yields were produced in San Diego county, one person being credited as the owner of 6000 colonies of bees, producing \$50,000 worth of honey and beeswax. The next year, 1877, proved most disastrous by reason of an extremely dry season. Thousands of colonies of bees perished for want of food, and the spring of 1878 found many apiaries entirely destroyed. Discouragement took a fast hold on the average bee-keeper, and to such an extent that he quit the business in disgust and never embarked in it again. Low prices for honey have been the rule since 1876 until the present year, when, by reason of a short crop and the meager supply of honey on hand, both in California, the Eastern States and the West India islands, the price of honey has gone up nearly one-half more than it was a year ago, and this right in the face of low-priced sugar, an article that has heretofore governed the price of honey to a great extent.

Among the men of means now pouring into Southern California in search of a salubrious climate and a rich soil that has never failed to give a fine crop in 100 years, no doubt many may be found who have in their old homes handled the honey-bee, either for profit or pleasure—that pleasure derived from investigating the habits and peculiar instincts of the most wonderful creature in animated nature, seemingly endowed with an intelligence that man himself can hardly measure. To such men, coming as they mostly do from northern latitudes, where winter care of bees is often greater than the care and labor bestowed in summer, we would say, take hold of the bee business in this land of sunshine, where, on an average, there are not 15 days out of the 365 of the year in which the bee is not on the wing—in this land of perpetual bloom, where the honey-bee may gather nectar every day in the year. Take hold with your experience, and, keeping step with the progress and advancement that permeate every other branch of business, help the honey-bee to gather and store the unlimited quantity of nectar that burdens the bloom of millions on millions of flowers in this favored land of ours, and save from the wild winds this wealth of sweetness that would otherwise be forever lost to mankind. The health-seeker could hardly find a business so conducive to perfect restoration to health, and the student of science can nowhere find a field that will afford a more interesting and absorbing study than that furnished by the apiary. Very many of our prominent bee-keepers have turned their attention to town sites and corner lots, quitting a business that has heretofore yielded them wealth without the risks of speculation, and to-day there are fewer men in the business than there were 15 years ago.

THE DAIRY.

Grasses in Placer County.

G. W. Applegate writes to the *Auburn Republican* as follows: Having experimented to some extent to ascertain the best plants to cultivate for pasture and provide winter provender for stock, the writer thinks perhaps he may be able to give a few practical hints that may be of some value to foothill farmers or those to become such.

Alfalfa or Lucerne.—Alfalfa is undoubtedly the most valuable plant yet known on our coast for both pasture and hay production, and where the necessary conditions exist it is the most profitable. The land should be deep soil, well drained, and put in the best possible condition before sowing. If new ground is used it should be well broken, all stumps and roots removed early in the season, and re-plowed and well harrowed in the spring. Sow 25 pounds of seed per acre and cover with a brush drag. If the land has been cultivated a few years it is much better than new, as the soil is pulverized and a much better stand is obtained.

Under these conditions on good red land, 10 tons of hay may be obtained per acre, besides affording much pasture. These results, however, cannot be obtained without irrigation after each mowing. Three crops a season are enough, as the hay will be much better by allowing the plant to mature enough to be in full bloom when cut.

Almost every foothill farm can have a small field of alfalfa if the place has a running spring, by holding the water in tanks or a reservoir and flooding after each mowing, the amount cultivated to be measured by the quantity of water obtainable. Naturally wet land will not do at all.

Italian Rye Grass.—The next most valuable is the Italian rye grass, which will flourish under the same conditions as alfalfa. It becomes very valuable in connection therewith by sowing the seed on the alfalfa-field, a very small quantity of seed being necessary as the plant seeds the ground. The grass will take hold of every vacant spot and thus keep your crop full. The quality of the hay is fully equal to alfalfa in value for hay, but it will not produce near so much an acre.

Experiments.—I prepared a piece of land two years ago, and sowed thereon, in separate lots, alfalfa, Italian rye grass, orchard grass, meadow, Alsiki clover, evergreen millet, teosinte, dhoura and other kinds to ascertain their respective values for pasturage. The land was deep red soil on a sidehill, and there was no chance for irrigation. The seed all came up and grew pretty well, but the hares and deer raided it so that only a few plants of a kind were permitted to seed, and on letting the cattle on it I found the rye grass, orchard grass and mesquite were injured by tramping and pulling up of the plants, the alfalfa and evergreen millet not being injured by grazing. The teosinte and dhoura are annual plants, and will not do without irrigation any more than corn. Evergreen millet will make a good growth on any deep soil and afford a large amount of fodder for pasturage. I would advise all to be careful not to sow it on ground where anything else is to be cultivated, as it is very hard to get rid of.

The pasturage of the foothills can be greatly improved by clearing off the brush and sowing many of the kinds mentioned without plowing. The cost will be very little for seed.

The coming season I will try other grasses. I have no doubt some kind will be discovered to fill all requirements.

Sorghum and Straw Sandwich.

EDITORS PRESS:—The season is now close at hand when farmers who raise forage crops of any kind for feed are thinking what kinds and how much to plant. Last year we planted about one-half an acre of Early Amber Sorghum cane. We began cutting and feeding about the time it began to head, and the second growth was ready to cut in six or eight weeks. I do not think cane as good for milk as for fat, but I put it up for winter feed and find it a most excellent food for wintering stock. I put it up in a peculiar manner—to me a new plan. Last fall when putting straw in a barn the idea occurred to me of mixing green corn or cane in the straw. After putting about four feet of straw in the barn I cut a load of cane and spread it about six inches thick over the straw, keeping it a foot or so from the sides; then a foot or two of straw, then more cane and so on till the barn was filled. I also put in a load of green corn. We put in between four and five tons of green fodder, and its weight pressed the straw so we were able to put more straw in with it than without it. When we came to open it the fodder was in good condition, and the stock would eat up every bit of it. I shall put it in thicker next fall so as to have enough to try it for fattening purposes.

San Ramon.

F. B. MORE.

[The idea is a good one and we are glad to have such a satisfactory report of it. We understand that Senator Boggs of Colusa makes a sandwich of green alfalfa and straw with the same success described by Mr. More. What have other readers done with forage growing and curing? These matters are very interesting.—EDS. PRESS]

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Tamescal Grange.

For the first time in many years only a quorum were present at the meeting last Saturday evening, March 3d, owing doubtless to the stormy weather. Two new members were balloted for and accepted and one application for membership received. Bro. Sewell gave an interesting account of his trip to Southern California, also to Marysville and surrounding country; spoke of the oranges freezing solid on the trees this season, a thing unknown before. Through a suggestion from the Worthy Lecturer a committee was appointed to draft resolutions on the death of Judge Joel Russell of Haywards, a member of Eden Grange. Sister Eliza Brooks was reported sick but improving. Full and well-written minutes of the previous meeting from the Worthy Secretary were listened to with interest, an account of which meeting we add to our former report, as follows:

On Saturday, Feb. 18th, Bro. Field from Maine being called upon under the Good of the Order, expressed how pleasant it was to meet with fellow-Patrons here, thousands of miles away from his own State, using the same degree and password, engaged in the same cause in the work of the Grange, the foundation of which is love and confidence. He was heartily encored, and showed in his pleasant countenance that he was, as he expressed it, "happy all over."

Bro. Webster from Creston, who had not had the privilege of visiting his own Grange for months, corroborated Bro. Field's expressions of happiness in being present.

In discussing the tariff and free trade, it was stated that the question of the coming presidential election will not be the railroad question, the money question nor the telegraph question, but the tariff question as a blind to get not only the farmer's but the people's attention called to the lesser evil concerning import duties in lieu of the former questions which are of more importance not only to nearly all of the citizens of the present day, but for the welfare of those of the future.

Bro. Webster mentioned that the prospects were favorable for good crops in San Luis Obispo county. He noticed the death record in Oakland had been very severe during the winter, and very many of the old pioneers and leading representative men had passed to "that bourne whence no traveler returns."

The climate at Creston during the past month has been in great contrast with that at the bay; while fog and rain and cloudy weather had been the rule in Oakland, sunshine and pleasant days had been the rule there. They seemed to have rain when they wanted it in sufficient quantities. He invited Patrons when they want to get a delightful, healthful and sunshiny climate to come down and pay them a visit. He had come intending to withdraw the names of himself and family, as they will soon leave for a permanent home on his ranch at Huero-Huero, but the good-cheer and love of his old Grange had caused him to change his mind and remain in the folds of the Grange and to contribute to its support until such time as a hall could be prepared and a Grange organized at Creston, which he expected would be at no distant date.

Sister Kinney asked some pertinent questions as to how the difficulty the people are now laboring under is to be removed if men will continue to be led blindly by party ties and selfish and ambitious leaders. Bro. Webster confessed her questions were seemingly unanswerable. He had noticed that when the San Mateo tax suits were likely to be decided against the railroad company in the Supreme Court that they hastily paid the delinquent taxes in that particular case. The taxes being paid, the suit was withdrawn without giving the people of the country the benefit of the otherwise inevitable adverse decision to the railroad company. Pending suits continue, and the taxes remain unpaid, and over two millions of dollars of taxes are withheld by a few railroads in our country. No political party dares adopt Senator Pattison's minority report of the United States Railroad Commission. No party dares to take up the advocacy of the postal telegraph.

Secretary Babcock encouraged Sister Kinney with the remark that giving women the ballot would likely correct affairs. It was conceded that no hopes for reform would be realized except from the ashes of the old parties. Remarks followed from Bros. Frink, Paine, Renwick and Dewey on the same

subject. At this juncture recitations from the younger sisters enlivened these dry business problems, Sister Jessie Weed rendering in a pleasing and correct manner "Vigilance," and further on, as a closing piece to the program arranged by the Worthy Lecturer, Sister Nellie Webster ably recited the "Liberty Bell." Intervening, Sister Blackwood sang the old ballad "John Anderson My Jo" with pleasure to all, and Sister Dewey read a selection entitled "Rapid Passenger Service," a humorous description of ballooning in the future, [which may be found in our "Home Circle."]—EDS. PRESS.

At the next meeting, which takes place on Saturday, the 17th, at 2 o'clock, we hope to confer two degrees on a class of four in waiting. Also anticipate the pleasure of a visit from Sister Overhiser, who, we understand, is visiting her sister in San Francisco. Shall expect an account of her visit to the National Grange, etc. Hope that Sister J. F. Deming will be with us, as she is steadily recovering her health at her daughter's home in Oakland. S. H. D.

DISTRICT LECTURERS.—Worthy Master W. L. Overhiser has appointed the following District Lecturers: Geo. W. Hack for

In Memory of Joel Russell.

The Memorial Committee of Eden Grange has sent us the following tribute for publication:

WHEREAS, On Sunday, the 19th ult., in accordance with the Divine Will, Joel Russell of Haywards departed this life in the 66th year of his age, suddenly and without warning, being stricken down with apoplexy. Brother Russell was a charter member of Eden Grange—at one time its Master, and for a long time its Lecturer, and at one time Chaplain of the State Grange. Born in the State of Maine, he at an early age with his parents removed to the State of Massachusetts, where he grew to manhood. In 1850 he came to California by the Cape Horn route, and first settled in Stockton, then only a mining camp; thence he drifted to the Northern mines and to Portland, Oregon; and then back to San Francisco, and finally to Alameda county, where he arrived in 1852 "flat broke," without a dollar but with plenty of energy and determination. Selecting a piece of land in Alameda county on the Soto Rancho, he commenced farming, and when the title to that rancho was confirmed to the claimants for himself and as trustee for some others, purchased a seventh interest in the same, retaining to himself the farm he had settled upon, and

which tended to impel and ennoble morality. His views grounded upon personal conviction manifested themselves in worthy action in the promotion of truth and justice to all humanity. Resolved, That a copy of these resolutions be transmitted to his family.

W. C. BLACKWOOD,
F. PERHAM,
S. E. DENNIS,
Committee.

The State Executive Committee of the Prohibition Party having been called together in special meeting by Vice-Chairman Henderson, unanimously adopted a preamble and resolutions, of which the following are extracts:

WHEREAS, We have heard with profound sorrow of the sudden death of Hon. Judge Russell, the honored Chairman of our State Central Committee, and the standard-bearer of our party in the last gubernatorial campaign in California, it is hereby

Resolved, That we express our deepest and heartfelt sympathy with the bereaved wife and family in the great affliction and irreparable loss which have befallen them, and we pray for them that the presence, comfort, consolation and help of the Divine One may be graciously and fully vouchsafed to them.

Resolved, That the Prohibition party has lost one of its most faithful, noble, valued and devoted members, a man of sterling integrity, great fidelity to principle, a good and true citizen, a most genial, generous and warm-hearted friend, beloved and trusted by all who knew him.

In his funeral sermon, which was from the text "No man liveth unto himself and no man dieth to himself," Rev. Mr. Madge said: "Judge Russell will not be remembered because of his diligence in business, because of the lands he has bought and planted, or the gold he has accumulated, but for his devotion to a great principle. He will be honored by all true hearts because he dared to raise aloft and bear forward the banner of an unpopular and despised cause."

"Men whose views or feelings on the question of temperance reform are widely different from his, will, as they are true men, respect and reverence him for his noble courage, his persevering faith and his consistent efforts in opposition to the liquor traffic, the great overshadowing curse that is blighting the glory of this fair land. He never lost an opportunity to declare his principles. At home and abroad, in sickness and in health, and, like the apostle with the gospel 'in season and out of season,' he denounced this traffic in crime, and eloquently advocated its abolition. * * * Our departed brother did not live to himself, but for the cause of temperance and the good of others. Let us, as we surround his bier, rise out of self and live to bless our race."

"Let me say that I have lost by his death a personal friend whom I had learned to love as a father. He was always ready to help in the work of the church. None could be more ready to give time and thought and money to the cause of Christ. The Congregational church has met with a great loss. We all have lost a friend."

A Card from Mrs. Russell.

The widow of our departed brother has published a card of grateful acknowledgment, as follows:

To Friends Tried and True:—The love of God and His presence seemed manifest through the tender sympathy and self-forgetting, tangible ministries of neighbors and other friends who seemed to fly, fairly, at the moment, to the place where the spirit of our loved one so suddenly, so blissfully, it seems triumphantly, took its flight. Let no one ever feel that true words of comfort are vain, for words have been so fitly spoken by voice and pen that they are "like apples of gold in pictures of silver," and let each who has spoken and each who has written and each who has sung with heaven-inspired voices it seemed in very truth, words of love, sympathy and consolation, take this to self, as from my own and my son's hearts in grateful acknowledgment and appreciation. Our little world turned its faces to us, clasped our hands, took us to its heart tenderly as the Master did to Mary and Martha. Jesus wept. Thrice has my heart been stirred to great faith in human nature taught by Christ's God-given, loving sympathy. Twice recently in California, as our hearts too well attest. We do not feel alone. Feb. 28, 1888. MRS. JOEL RUSSELL.

DEATH OF DAVID L. ADAMS.—Died in Oakland, Feb. 29th, David L. Adams, a native of New York, aged 68. Mr. Adams lived for many years in Buffalo, where he was foreman of a large shipyard. He resided in Oakland from 1874 to 1879, and then went to Dayton, Wash., to engage in farming. Eight months ago he returned to Oakland and made his home with his son, H. L. Adams. Alfred W. Adams of Oak-

THE LATE JOEL RUSSELL.

Sacramento county; Walter Renwick for Alameda county; R. G. Hamlin for Plumas county; S. Sollera for San Joaquin county; A. I. Cook for El Dorado county; and H. J. Ostrander for Merced county. The following have been appointed Deputies at Large: I. C. Steele of Pescadero, Geo. P. Loucks of Pacheco, and B. F. Frisbie of Yuba City. The Worthy Master was careful to appoint these Deputies at large so that one (Bro. Frisbie) could work in the northern part of the State, another (Bro. Loucks) could take care of the central section, and the other (Bro. Steele) could advance the Grange interests in the Southern District without the expense of traveling that would be necessary if only one Deputy was appointed.

Anti-Debris.

On the 22d ult. the Anti-Debris Association of the Sacramento Valley filed with the Clerk of the Board of Supervisors of San Francisco a copy of the Biggs bill, now before Congress, entitled "A Bill for the Investigation of the Mining Debris Question in the State of California," together with a copy of the protest against its passage which appeared in the RURAL PRESS of February 25th.

The matter is submitted to the Board of Supervisors of San Francisco by the Anti-Debris Association in the same manner that it has been submitted to other boards in the various counties of the State, simply to gain approval.

which remained his to the time of his demise. He subsequently purchased lands in the town of Haywards, which he improved and made his permanent home. In 1856 he married Miss Carrie M. Bartlett, who survives him. He was the father of a daughter since deceased, and two sons. He left property worth probably \$100,000. Brother Russell was always a prominent man in the county. At one time he filled the office of Associate Judge with the Hon. A. M. Crane in the Court of Sessions for Alameda county. He was a man of generous impulses, giving liberally his means to any needy purpose having his approval. In the war of secession none gave more than he to the Sanitary Funds. In politics he was a man of strong convictions, and always ready to express them. Originally a member of the Old Liberty party, he in turn became a Republican. When that party, as he had conceived, had completed its mission, he became a strong Prohibitionist. His time and his money for the last 20 years of his life were given freely to advance and disseminate its principles. In 1886 he was the Prohibition candidate for Governor of the State, receiving 6258 votes for that position. As a Patron of Husbandry he was a diligent and faithful laborer, having its welfare and prosperity at heart. Therefore be it

Resolved, That in the death of Bro. Russell the Patrons of Husbandry have lost a firm and active laborer, the community a valuable citizen, and his family a loving husband and father.

Resolved, That it is but just to offer this tribute to the memory of one who has left his sorrowing relatives and friends a legacy in remembrance of his virtues, his services, his honor and truth. Nobly did our brother perform life's duties on the stage of earth—his independent method of thought and action scattered the seed

land is another of his sons, and Amos Adams of San Francisco, formerly Secretary of the State Grange, is his brother.

Telegraphy in Congress.

In the U. S. Senate last Saturday Reagan reported adversely from the Postoffice and Postroads Committee the Edmunds and Cul-lom Postal Telegraph bills, and reported favorably what is known as the Spooner bill to regulate interstate commerce carried on by telegraph, and to subject the telegraph companies to the supervision of the Interstate Commerce Commission.

There were some amendments made, but they do not materially change the provisions of the original bill. The chief amendment is the incorporation of an equivalent to the "long and short haul" clause in the Interstate Commerce bill—a provision that it shall be unlawful to charge more for transmitting a message a short distance than for transmitting one a long distance in the same direction.

The report accompanying the bill says that the telegraph system of the country has become a monopoly, and complaint is made that rates are extortionate and are levied to pay dividends on watered stock. The committee, while recognizing the necessity for a reasonable and limited control of telegraph companies, doubt the policy of the Government securing the ownership and entire management of them. It does not pretend to extend the power of regulating to dispatches which are only within a State, and supplementary legislation will be made by States. The report in conclusion expresses it as the sense of the committee that whatever can be done as well by private enterprise and with as much safety and security to the people should not be undertaken by the Government at present.

No action was taken in the matter.

In the House of Representatives the consideration of the Pacific Railroad Telegraph bill was resumed.

Symmes of Colorado said the purpose of the bill was merely to compel subsidized railroads to comply with the conditions of the grants creating them. The contracts between the Union and Central Pacific Railroad Companies and the Western Union Telegraph Company were void *ab initio* and in direct violation of the express provisions of the statutes and grants creating the Pacific railroad and telegraph companies, and were in violation of public policy and against public law. The contracts under consideration had been made with the object and intention of defeating every substantial requirement of the grants. After Jay Gould and his ring had conducted the Union Pacific as long as he could make anything out of it, he had walked off, leaving the company bankrupt and taking along with him the assets of the telegraphic lines, with which he levied a discriminating tribute upon the people west of the Missouri river.

Dockery of Missouri said that under the granting acts the Pacific Companies were required to construct not only railroad lines but also a telegraph line. Instead of doing so, they had assumed to divest themselves of their obligations by a contract with the W. U. T. Co., conferring upon that company the exclusive right of way along the railroad lines. The acts of Congress requiring that the telegraph lines along the Pacific roads should receive all business without discrimination were nullified by this unlawful contract with the W. U. Co.

The bill was passed; ayes 197, nays 4; Bliss, Ketchum, Merriman and White of Missouri voting in the negative.

NORTH BUTTE GRANGE.—Bro. L. D. Hedger, Worthy Master of North Butte Grange, writes: Our meeting on the 25th ult. was well attended and all were in good spirits. The tariff question was discussed but no conclusion was arrived at. The weather is very beautiful at this time and the crop prospects splendid. I don't think I ever saw a better stand of wheat on the summer-fallow land, and the winter-sown grain looks well considering the storms and cold weather we had in January.

THE REGULAR MEETING of the Executive Committee of the California State Grange is hereby called to meet at the office of the Secretary, 220 Market street, San Francisco, at one P. M. on Friday, the 6th day of April, for the transaction of such business as may be brought before it relating to the interests of the Order.

A CORRESPONDENT informs us that the subject of starting a new Grange at Live Oak, Sutter county, is being discussed by the farmers in that vicinity. He thinks that as soon as harvesting is done a call will be made on the State Lecturer for that purpose.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

The multiplication of great trade conspiracies called trusts, formed upon the model afforded by the Standard oil monopoly, sets before the people of this country a problem which, in defense of their rights, they must soon undertake to solve. A trust is a combination devised for the establishment and maintenance of a monopoly in such a way that the real design of its founders and the operation of its machinery are in great measure concealed from the public. Absolutely controlling a large number of corporations, which seem to be independent of each other, monopoly in this form presents to the world the features of ordinary competition. But behind the mask there is only monopoly, heartless, tyrannical and oppressive. The trusts of these days are not corporations, but by usurping the franchises of many corporations they exert, without the restraining influence of charter regulations, enormous power. They are monopolies of monopolies.

Trusts Born of Greed.

"But a trust company—a corporation of corporations—what is that? What but a sea-devil in the moral world? It is the embodiment of famine; its multitudinous tentacles, each vital and each insatiate. It thrusts a sucker into every home. The measure of its hunger is the need of its prey. It drains the product of the muscle-force and brain-power of every breadwinner for its ravaging maw. Born of greed, what is a 'trust' but an appetite unappeasable for gold? Fed to grow, it grows only to feed. And reversing the order of nature, the baser organization gluts itself in the nobler; avarice feeds on the intellect, the affections and the lives of men."—*Chicago Herald*.

Wealthy Corporations.

"It is estimated by competent authority that more of the wealth of the United States is now owned by corporations than by private persons. Fifty years ago corporations were nothing; now they are everything. They dominate all channels of activity except farming and merchandising; they control legislation; they make hewers of wood and drawers of water of all who are outside of their charmed circles. Soulless entities, they are made the scapegoats of the unscrupulous conduct of the most unscrupulous men."—*Jackson (Mich.) Patriot*.

The Grange as an Educator.

Bro. L. H. Fassett, of Florin Grange, writes us: I can but note the difference between the members of the Grange at the present time and the same members when I first had the honor of joining our noble Order. Then very few tillers of the soil ever gave a thought to matters appertaining to government, either county, State or National. It is true some did, but their numbers were so few that their influence was never felt.

But to-day what a difference is to be seen. The sons of yeomanry are coming to the front, not only in local matters but also in State and National affairs. And why is this change? It is but the outgrowth of the teaching of our good and noble Order of Patrons of Husbandry, whose structure stands on that everlasting and immovable foundation—eternal justice to all mankind. Yes, it is its teaching that has made almost every member give some thought to such great questions as the carrying trade, tariff and National finance—questions that are of vital importance to tillers of the soil. Great wrongs can only be set right by organizing and giving such subjects thought. We should think and think until the problem is solved.

Akin to Bribery.

We find this in an exchange, credited to the *Forum*. Whoever be the author, it is sound morals: The custom of paying eminent barristers large retainers to hold their tongue, and not appear on the other side, has the features of own cousin to a bribe, especially if any jurist so committed stifles his convictions and looks on quietly to see injustice done. I was informed by the treasurer of a Massachusetts railroad, 50 years ago, that to get ahead of parties wishing to tap it with a rival road, he ran with all haste to Daniel Webster's office across the way. Webster, who had been already approached, but not retained in the adverse interest, and who, perhaps, preferred the new-comer's cause, answered in guttural tones that made the treasurer shudder: "There is no bone broken, there is no blood spilt;" and put the retainer of 500 easily earned dollars in his vest-pocket. That minister of the law, part of whose office is to check bribery, is himself bribed who for pay undertakes a case he thinks

he can carry, but which he knows or believes to be bad, and who urges it on purely technical grounds, the letter against the spirit, with arguments that have no weight to his own mind. He is a pettifogger, perhaps a bully, too; yet so strong a hold on court and bar has the theory of forensic fight, in which, as on the actual battlefield, whatever comes to hand is lawful, that I signally failed in trying to convince that excellent man and eminent judge whom I well knew, Chief Justice Lemuel Shaw, that the practice of the bar was in any way based on a wrong principle. He still held that contending counselors should do their best to represent or misrepresent, they having naught to do with absolute equity or truth; it was for the court and jury to decide after all the fair and unfair crossing of logical swords.

FLORIN GRANGE.—Bro. L. H. Fassett, Secretary of Florin Grange, writes: At our regular meeting on the 11th ult. the subject of National government was under discussion. They took up National finance and there was quite a lively debate. Bro. Wilson, of Enterprise Grange, was present and read an article on the subject. Sister E. Reese read an essay at this meeting on "Children in the Family," which was well received.

The Citrus Fair at Los Angeles.

Although the success of the citrus fair at Riverside, early in February, was so complete, and the attendance so numerous, the Riverside Board of Trade did not feel that "enough had been done, but decided to transfer the exhibit to Los Angeles, and thus give more Eastern visitors an opportunity to see compacted the choicest products of the southern orchards. Fruit was promised from various places, some of which were not represented at the former exhibition, and all contributors agreed to send the best selections of oranges, lemons, etc., at their command. The committee secured Armory hall in Los Angeles, where the displays were arranged with care and taste, and at last, on Tuesday evening, Feb. 27th, thrown open to public inspection.

The hall had been gaily adorned with flags and streamers, with silver and golden stars set here and there, while the stage, whence the 7th Infantry band discoursed fine music, was embowered with plants and flowers. The north side of the room was wholly given to Riverside. The south side was occupied with the exhibits of Ontario, South Riverside, Highlands, Santa Ana, Agua Tibia, San Diego county, Anaheim, Colton, Sierra Madre, and San Bernardino. In the center of the hall was a large booth decorated with ferns and trailing vines in which was a large assortment of oranges, Lisbon lemons, and other fruit, skillfully disposed. At either end of the hall were long tables running to the center, on which oranges of many varieties were arranged in huge pyramids, and in the form of hearts, stars, diamonds, and other beautiful designs. Next the stage was a large and varied show of raisins and bleached apricots.

To mention the exhibitors in detail and describe their several outputs would be largely a repetition of what we published two and three weeks ago. The Twogoods, E. W. Holmes, S. C. Evans, A. D. Haight, John G. North and many other growers whose names have become associated with the finest varieties of citrus fruits, were well represented.

One of the most noticed exhibits was a bank of handsome, vari-colored oranges, 10 feet wide and rising nearly to the gallery, bearing across its face the legend in small St. Michael's oranges, "Bakewell's Best." They were from the "Badkadyllyn ranch" of Thos. Bakewell & Sons, Riverside. A very large pyramid containing choice Washington Navels, Malta Bloods, Paper Kind, St. Michaels, Mediterranean Sweets, seedlings and other varieties of oranges shown by Patty & Perley of Riverside, also attracted a great deal of attention.

The display from Anaheim was perhaps the most varied of any, embracing Washington Navel and Mandarin oranges, Japanese persimmons, many kinds of preserved fruits in glass, very fine citron, bergamots and Sicily limes, English walnuts, St. John's bread or English locust, and ostrich plumes and eggs.

Besides the fruits, there were specimens of coal, porphyry, lime and pottery clay from South Riverside; and of Slover mountain marble, both rough and polished. Black, white and mottled marble was shown, and a marble stand, the stone having a greenish cast through it, was a very pretty piece of workmanship.

Heavy rains interfered somewhat with the attendance early in the week, but when the sun shone on Saturday, guests came in floods. Among them were Gen. Fremont and Mrs. Jessie Benton Fremont, who expressed delight at the charming display of fruits and flowers.

On Sunday morning the hall was filled with a worshipping assemblage, and Rev. Dr. Fay discoursed eloquently on "The Beauty and Bounty of Nature."

The display is claimed to be the finest and most complete citrus fair ever held in Southern California.

THE STATE BOARD OF SILK CULTURE has removed from No. 21 Montgomery avenue to rooms 91 and 92, Flood building, corner of Fourth and Market streets, where the reeling machines will soon be running again.

Mr. Porter's Views.

Washington Porter of Porter Bros. Company of Chicago is in California making his twentieth tour of examination of our producing regions. To a reporter of the *Bulletin* he has given the following expression of his views:

"In all my trips I have never before found the outlook for the California fruit business and for California so promising. I have never seen before so much interest in California shown in the East as at present. I tell you that the shipping of fruit there has done as much as anything to advertise this State. People are writing to me all the time, asking about where such fruit was raised, saying they have so much money and wanting to know which is the best part of the State to go to for fruit-raising. I am an immigration agent for California without emolument. I tell them all to come here, for I am a great believer in this State. It has done a great deal for me, and I am grateful for it. It is no exaggeration to say that our firm, since its establishment, has been handling fully 75 per cent of the green-fruit product of this State that is shipped east of the Missouri river. Last season I am sure our transactions in California products aggregated over one million dollars.

"Regarding plans for this season, I do not care to say much just at present, while our arrangements with the Fruit Union are yet unsettled. That organization has been a good thing, but they have ideas of their own regarding methods, and are planning a number of changes soon. They are talking of selling fruit by auction in Chicago, as they have been doing in New York and Boston. Personally, I could not object to that, for we would, doubtless, make more that way, but if you or they ask me as a business-man my opinion of that plan, I should be opposed to it for several reasons. One is, because last season we sold in Chicago to New York dealers for the New York market, at private sale, fully three times as much California fruit—union fruit—as the New York agents of the union sold at auction. The New York dealers had had their men in Chicago and would ship direct to their firms. They would save in this way often a full day—getting the fruit before their customers that much earlier—and with perishable fruit that counts. The auction fruit would reach the Jersey-City side in the morning. It had to be taken out and exposed for examination, and then sold in the afternoon. The men who bought in Chicago had their fruit ready for sale by nine o'clock. As to prices, I will wager a suit of clothes that the Chicago prices averaged more than received by the auctioneers. One New York firm alone bought over \$140,000 of fruit during the season. With sales by auction in Chicago, we could, of course, buy in enough to supply our customers, but there would, necessarily, be fully a day's delay in disposing of the fruit. All the dealers through Illinois, Indiana, and Michigan, that we supply now, cannot keep men in Chicago. They will have to telegraph and be to much more annoyance than by the present method. There is a greater local demand strictly in New York than in Chicago, and the auction plan, therefore, works better there than it would in Chicago. However, this is only my opinion. If the union wants the fruit sold one way, it makes no difference to me.

"Yes, I have been all about this State, and have noticed the large and increasing acreage in fruit trees, but I am not afraid of fruit-raising here being overdone. I used to think that way years ago, but new markets are opening all the time. The increasing population here will make a greater local demand and then the Eastern fruit districts are constantly failing or dying out. Last season the fruit crop of Delaware, Maryland, and all that peninsula country was almost a failure, and California fruit was consequently in great demand. The old orchards are shortening down and dying in many districts. There is a large undeveloped area here adapted to fruit-raising. Just look at that Fresno country; at what it was a few years ago and now. Fresno raisins are more sought after than foreign raisins. At a fair we had in Chicago, not long ago, I took a box of the choicest Dehesia raisins, covered all marks up carefully, and put them alongside of California raisins. I had dealers, expert judges of raisins, come and look at the two boxes, and I tell you not one could tell which was the California product and which the imported.

"And then French prunes from California are the finest in the world. The product is famous, and yet we do not produce here one-tenth of the amount annually brought to this country from Europe. Apricots, too, are the best that can be produced anywhere. The demand for canned and dried fruits and fancy preserves is increasing very rapidly. Some people here are just beginning to put up fancy fruit preserves like some French products, only invariably the fruit used here is better than that from abroad. The canning trade is growing. One of the dealers here told me that last year he sent 600 cases of canned fruit to Europe, just for an experiment, and now orders have come back to him for 7000 cases, which is a pretty fair increase in one year. A great many families East buy the California fruit and can it for themselves, some persons always preferring this way to getting the fruit already canned."

WE received at this port last month 100 135 tons of coal, against 80,780 in February, 1887. Prices still continue high.

Away.

I cannot say, and I will not say
That he is dead—he is just away!

With a cheery smile and a wave of the hand
He has wandered into an unknown land,

And left us dreaming how very fair
It needs must be, since he lingers there.

And you—O you, who the wildest yearn
For the old-time step and the glad return—

Think of him as faring on, as dear
In the love of There as the love of Here;

And loyal still, as he gave the blows
Of his warrior strength to his country's foes—

Mild and gentle as he was brave—
When the sweetest love of his life he gave

To simple things: Where the violets grew,
Pure as the eyes they were likened to,

The touches of his hands have strayed
As reverently as his lips have prayed.

When the little brown thrush that harshly chirred
Was as dear to him as the mocking-bird;

And he pitied as much as a man in pain
A writhing honey-bee wet with rain.

Think of him still as the same, I say:
He is not dead—he is just away. —Anonymous.

The White Lady.

One night I sat alone, thinking and thinking,
and wondering if there was any truth in the
story of the White Lady of the Hall, and
whether, if there were, I had the courage to
meet her, for the story went that any one who
dared to meet her and to speak to her should
have what he asked, though if you met her
and were afraid to speak, some great harm
would come—something worse than death
itself—madness or the palsy, or blindness,
mayhap.

Long ago, before any living man's grandsire
was born, they said the White Lady was a fair
woman and no wraith, a fair, meek woman
whom a king loved, and the Hall was the place
where she dwelt; and she wore jewels and fine
garments, and servants waited on her, and the
king came often to the feast, and to praise and
kiss her.

And sometimes he would send a message be-
fore he came, and bid her meet him under a
great oak that stood at the Hall gate, and she
always did as he bade her.

And one night a message was sent and she
went, as was her wont, to meet him; but as she
stood under the tree watching for him, one who
had beguiled her to the spot with a false mes-
sage smote her with an arrow, and she dropped
down dead.

A jealous woman had hired the murder, it
was said, and some say the jealous woman be-
came a queen.

The lady died, and the Hall was left alone
and moldered in ruin, but ever since, once in
a year, on the anniversary of the day on which
she went for the last time to meet the king, the
lady, all in white, walks, so the legend says,
thrice around the tree.

And the night is called in our neighborhood
"White Lady's Night" for no other reason;
and Thomas Martingale, going home late from
the Crown and Scepter, once saw the lady
under the tree—so he said—at least the old
folks told the story to the young, and we were
bound to believe it.

Now, upon White Lady's Night, I, Mark
Yardley, sat alone wondering and thinking.

I wanted something that I knew not how
to win.

It was not gold, nor was it silver, and house
and lands and the wherewithal to live I hoped
to win with my own strong arms, but what I
longed for seemed to flit beyond my reach.

Try as I might, I never could make sure of it.
It was a woman's heart.

I loved Alice Hunter as no man ever loved
woman before, but she smiled one day and
frowned the next; and then, too, she was above
me, and despised me, very likely.

How could I tell her what I felt that she
might make a mock of me? Yet, if I never told
her, all my chance was gone.

This White Lady's Night, thinking of the
story my grandmother often told me beside the
winter fire, I went mad, as lovers do sometimes,
and I said to myself: "I will go to-night to the
old oak; and if the White Lady walks I will
seize her robe and ask her to give me the wish
of my heart—if I die for it."

One must do something. Those that are in
love ask old hags to tell their fortunes, and
take the settling of leaves in a teacup for
prophecy. I knew one who said to himself:
"If the bird flying yonder lights on the apple
boughs my love will be happy; but if it flies to
the hedge all will go wrong;" and when the
little thing folded its wings among the apple
blossoms was glad all night.

Oh, yes, lovers are mad at times. I must
have been, then, when I opened my window

and dropped from it on the grass, and took my
way toward the ruined Hall and the old oak on
White Lady's Night, to ask my happiness of
the White Lady; but I did it.

Oh, how well I remember. The moon shone
overhead, round and white, and all was still.
The lights went out in the cottages in the hol-
low, and the trees stood black against the bright
sky.

And down upon the night fell, one after the
other, 12 strokes from the church clock; and
I knew that it was midnight, and the hour for
the White Lady to walk, and made all the
speed I could, lest she should come and go and
I none the better for her.

At last I stood before the Hall, and saw the
tree with its great branches spreading far and
wide—a tree that was more than 200 years old,
they said; and strangely and solemnly through
the empty windows of the Hall the moon was
shining; and I looked and held my breath, for
there, under the great tree, stood indeed a
woman's figure.

It wore some light garments, and was wrap-
ped and hidden so that I could not see the face,
and it moved a little as I came near, and, look-
ing over its shoulder, began to glide away; and
I knew that if gossips told the truth, I must
either win or lose.

I sprang forward, grasped the flowing robe
and held it close; and I whispered, for indeed
my heart beat so fast that my voice was gone:

"My lady, my lady! I have come here to-
night to ask you for a gift, and I fear you not;
for why should I fear? And you who died for
love will be kind to a lover. May I ask? Will
you listen, lady?"

Then a voice, soft as a young bird's twitter,
answered:

"Speak!"

Just "Speak," nothing more, nor did the
face turn toward me.

"I love one dearly, lady," I said, "and what
I ask is her heart. Can you help me?"

Again the whisper came, fainter even than
before:

"Her name? How can I tell unless I know
her name?"

"It is Alice Hunter," I said; "and oh! she
is dearer to me than my soul."

There was a pause.

Then faint and slow the answer came:

"Be bold; ask her for her heart, and she will
give it to you, on the word of the White Lady.
Now go; leave me."

I dropped the white robe.

The lady glided away, and I went home as
one might walk home in a dream.

And the next day I almost believed that I
had dreamt; almost, but not quite.

For I had grown bolder, and that day I told
Alice Hunter of my love, and she did not scoff
at it.

We were married.

When I had been a happy husband for a
month we returned from Boulogne, where we
had gone to spend our honeymoon, and gave a
party, to which we invited all our old friends
and neighbors.

In the course of the evening, the legend of
the White Lady became a topic with some, and
while listening to the conversation, I observed
my wife's color change, and finally saw her
leave the room.

Believing that she had become faint with the
heat, I followed in a few moments and found
her sitting on the stairs, with a smile lighting
up her features.

"I feared you were ill," I said, sitting down
just above her.

"No," she said. "I am quite well. I am
glad you followed me, for I have something to
tell you."

"And I have something to tell you," I said,
bending over her. "Something about the
White Lady our friends are discussing."

"Indeed," she said, hanging down her head
and toying with her fan. "Well, tell me your
story first and then I will tell you mine."

I told her what I had seen at the tree and
what the White Lady had promised me; and
then I asked her for her story, which she told
me in the following words:

"It was on White Lady's Night," she said,
"that I went down to the old oak to ask a gift
of the White Lady, and as I stood waiting,
half hoping, half fearing to see her, one came
over the hill, and I knew that it was you, and
tried to run away and hide myself, but you
caught me by the dress and spoke to me, so
that I knew you believed me none other than
the White Lady. And so first I learned that
you loved me, and, oh, I feared that you should
see my face; but, oh, I did not, and you let me
go when you had your promise."

"And so I was no ghost-seer, after all," I
said, "and the White Lady never spoke to me?
But what was it you went to the old oak to
ask of the fair ghost that night, my Alice?"

Then she turned her soft eyes away from me
and hid her head upon my bosom and whis-
pered:

"That you should love me, Mark, for I al-
ready loved you well, and I could not read your
heart."

"Then God bless White Lady's Night,"
said I.

And she answered "Amen" as she rose and
took my arm to lead her back to our friends.

THE London Times has an account of a small
vessel for a mission society in Africa, which is
built entirely of delta metal. The vessel is 21
feet long, 7 feet beam, with a depth of 3 feet.
For convenience in transporting, she was built
in three sections.

Rapid Passenger Service.

Cross the seas in four days in the new "Pocahontas?"
Forsooth, time and distance no longer can taunt us.
Soon we'll go round the earth in a sumptuous man-
ner.

Just as quick as an ant can crawl round a banana.
We'll whirl the big earth as we'd whirl a croquet
ball.
And play with the globe as a schoolboy would play
ball.

Very soon we'll be cramped for space and diversion,
And the world be too small for a Raymond ex-
cursion.

And we'll sink in ennui and in social stagnation,
For there'll be no place left for a summer vacation;
For the time will soon come, so the portents all utter,
When we'll wake in New York, go to sleep in Cal-
cutta;

When we'll breakfast in Rome near the palace of
Cæsar,

And dine in Soudan where no crackers nor cheese
are;

When we'll sup in Melbourne, go to bed in Bogota,
And breakfast next morning somewhere in Dakota.

Pondering deep on these matters, I fell in a vision,
And I'll tell you my dream with the utmost precision.

The world had grown old and had lost its variety,
And strong men—they perished from very satiety.
The doctors prescribed change of air for a medicine,
New sights and new scenes—so they all went to
Edison.

A chosen committee the Wizard accosted,
And told him the world was completely exhausted:

"'Tis a poor worn-out fiddle we can't play a tune
with,

Get us up a machine to go up to the moon with."

The genial inventor politely assented,
And the great Suter-stellar balloon was invented,

That would dart through the ether with arrowy mo-
tion,

As a pointed-nosed swordfish will dart through the
ocean.

As men now buy a ticket to go on the cars with,
In my vision they bought one to go up to Mars with.

There grew up a commerce between us and Venus,
Large business transactions were managed between
us;

Custom-houses were built to promote and to ease
trade

'Twixt us and the moon in the booming green cheese
trade;

And the thought of the earth in harmony kept tune
To the thought of the sages who dwell upon Nep-
tune.

Our coats were all cut in the most approved pattern
By the fashionable tailors who dwell upon Saturn;

We imported physicians for treating and curing us
From the medical college established in Uranus,

And the dudes, as before, still continued to weary us
By aping the customs and manners of Sirius;

We found that our neighbors could hardly endure us
If we didn't use the accent of distant Arcturus,

And with scorn, ill-concealed, would they all keep
their eye on

A man whose rude tastes were not formed in Orion;
And they thought that no act was more wicked or
stupider

Than not to believe in the bible of Jupiter.

So we copied all worlds, till at last Mr. Edison
Told his doctor point blank he would take no more
medicine,

"The balloon I invented has made us all flunkies,
We ape other worlds like a mere race of monkeys;
Our world's a mere echo—there isn't a doubt of it,
I won't take your physic—I want to get out of it."

—S. W. Foss.

Spring is Here.

[Written for the RURAL PRESS by M. S. P.]

During the dark days of rain that fell in the
first part of the month, I have enjoyed quite a
feast of good things in the literary line. Hunt-
ing in the old farmhouse, where I was spending
some weeks, for something to read, I came upon
a complete file of the RURAL PRESS from 1881.
The readers of the paper can well appreciate the
pleasure that lay before me and that in the days
following I so much enjoyed. The illustrations
were of great interest to me, as I have never
seen the places so well reproduced.

Noticing articles in the spring of each year
in reference to the early appearance of the wild
flowers, I sighed for the time when the fields
about me would be brilliant with color and
fragrant with the odor of the sweet-scented,
vari-tinted blossoms. Looking wistfully out at
the heavy clouds and falling rain, I longed for
them to clear away and let the warm sunshine
coax my little favorites from the now-soaked
ground.

I turned away from the window to the cheery
comfort of the bright blaze from the logs in the
large open fireplace, and fell to thinking of the
seven successive winters I have spent in Cali-
fornia. Surely each has been colder than the
ones before. Of course I have become more ac-
climated, but that alone does not account for it.
Last winter the sleighing and snowballing
called to my mind like sports in my Eastern
home. When I found that a friend living a
couple of miles above our county seat was posi-
tively snowed in, and had finally to walk out, I
thought is this our sunny California? Old resi-
dents assured me they had seen nothing like it
since they came here in the fifties. So my
spirits rose, and the next month my eyes were
gladdened by the welcome sound of nest-
building birds and by the fragrance of many a
blossom, so short a time since under the soft
white blanket that had covered the astonished
earth. This winter the cold wave that swept
the country from north to south was somewhat
moderated before reaching us, and though hot
fires and warm clothing were essential for a few
weeks, we escaped most of the annoyances of the
ordinary Eastern winter.

These days of warm, grateful sunshine, the

last of February, are a pleasant compensation
for all we had to endure for a short time. Yes-
terday one of the boys came in from hunting
with the first buttercup in his hand. I hailed
it as a friend long time away and returned to
stay with me quite awhile. Soon, I thought
joyfully, I can gather my hands full of them
all if I wish. Jack said he saw the bud of one
dear little cyclamen—"Black-eyed Susie," as
we call it. "Shooting Star" and "Mosquito
Bill" are other local names for this flower.
We have them purplish red, pink and white.
Though not native to the Eastern State where
my childhood was passed, one was once found
blooming and carried to a botanist living near.
He made a little study of it, and finally pro-
nounced it a California flower. How wonder-
ful it then seemed to me, and how dear it has
since become! As long as I lived there the
single plant bloomed once every other year.
Can any one tell me why? The theory of its
being there at all was that some passing bird
had dropped the seed.

Straight out from the front of the house is a
field of about 15 acres of cleared ground sowed
in wheat. Before long, in among the tender
green of the young wheat, will be flowers in
countless numbers, purple and golden, scarlet
and blue, pink and white. One year I counted
20 varieties. Think of the pleasure in store for
me! When the wind blows over them, they
bow before it, recalling to me Joaquin Miller's
lines:

"Sea wave of grass on the plain,
That breaks in bloom by the fountains,"

Grass Valley.

An Open Letter to the Secretary of a Fair Association.

Preparations for the various agricultural fairs
being now in order, the following letter to the
secretary of a fair association—published in the
Dakota Bell—is at once entertaining and sug-
gestive:

I am a farmer and I hear you are going to
have another agricultural fair next fall, and I
thought I would write and tell you that I am
getting ready for it.

You probably don't remember me, but I at-
tended your fair last year. I brought the dog-
gondest biggest punkin on the grounds,
though I reckon mebbey you didn't see it, most
of your time being took up keeping a record of
the different racing-horses entered. I also had
a fine blooded cow, while my wife brought a
big loaf of bread so light it wouldn't hardly lay
still, and two bottles of ho'made wine; though
you might not have saw these either, as I no-
ticed that besides the horse business you had
enough work for one man issuing permits to
those sturdy farmers which had three-card
monte outfits and such other agricultural
products.

And after all, it cost me \$10 to see the other
side of the cards one of these gentlemen ex-
hibited.

I reckon I may say I had hard luck at your
fair last fall. When I first drove in the folks
were making such a hollering 'bout a hossrace
that had just come off, and my team got scared
and run away and sprained my wife's ankle.
While I was looking round for a good place to
put the big punkin, a man came along and said
he was judge on wines and drunk up both bot-
tles of ours.

I afterward saw him standing in front of a
tent and yelling, "Ere's yer chance! Ere's
yer chance! Ere's yer chance! See the livin'
half-woman an' the man what was tittattoed
all over on the Island of Chattanooga! Only
one dime!"

I then went to tie up the cow, and when I
came back a tramp had his face in the loaf of
bread. I didn't care so much about that as
that I missed him when I kicked at him.

I staid three days, and each night some gyp-
sies, which were camping right on the grounds,
milked my cow and pounded her with a lum-
ber wagon whiffle because she switched her
tail.

I watched the races most of the time, there
not being much else to look at. One day I had
to pay a man \$15 because the hoss that came in
way ahead of the first two heats was the very
last one on the other three. I think that hoss
must have been too sick. I know I was.

The next day a pickpocket got my silver
watch.

About every hour Bill (that's my boy) would
come to me and get another half-dollar. He
said he had a system that he was certain must
finally beat the wheel-of-fortune, and the nut-
shells, roulette, and the man down back of the
barn who was throwing the loaded dice. I
couldn't say nothing because I took Bill with
me to show him how I was going to clean out
the three-card monte man that time it cost me
\$10.

My wife bought a bottle of liquid glue, which
proved to be mostly water, and a receipt for
soap which she afterward discovered was
printed in Norwegian. She would have bought
some other things, probably, but she lost her
pocketbook.

In the meantime I might mention that some-
body stole the whip, and spring seat, and end
board, and neck yoke off'n my wagon, and out
all the ivory rings off'n my harness.

When the fair was through I demanded my
diplomas on my cow and punkin, as they were
the only ones there. I got after some talk two
little pieces of paper with some printing on
them, and when I turned 'round to go out a

big fat man stepped on one of my corns. He was the owner of one of the race-horses, and was looking down rolling up the \$6500 the treasurer had just paid him as his share of the purses to put it in his pocket, so didn't notice me.

That, Mr. Secretary, is a brief and condensed history of my experience at your fair last fall. I shall come again this year, but as Bill says, I shall come heeled.

I shall make no exhibits, but I have got a two-wheeled sulky, and every day I hitch old Doll to it and run her round the five-acre field. I shall enter her in the senior class—as I believe it is called—I judge she is old enough.

Bill has got himself a thimble-rig outfit and has whittled some dice out of the bone of a mule's leg, and has inserted lead on the opposite side of the big numbers.

My wife is preparing liquid glue by the wholesale, the same kind she bought, and will peddle it on the ground.

For myself, besides entering old Doll and betting all my money agin her, I shall work the three-card monte business for all it is worth. I can already throw the cards so as to nearly always mix up my wife and occasionally fool Bill.

I am also painting the end of the ox-yoke to look like a face, and shall stick a clay pipe in its mouth and let people throw rolling-pins at it, three whacks for a quarter. Come over and try it. If you break a pipe you get six nickel cigars.

We shall all of us bum our feed on the grounds and sleep under the grand stand. If I can get a two-headed calf to exhibit in a tent (not to enter for a diploma) I shall do so. In fact, to sum the whole matter up, we shall come prepared for an agricultural fair, as we understand it. Yours truly,

ZACKARIAH WAYBACK.

P. S.—I shall wear a poker-dot shirt and smoke a cigar pinto high. Bill will stick out his chin and crook his elbow considerable.

Volapuk.

The cabalistic word is not a part of an Indian medicine man's incantation, as we might on first hearing it suppose, but the name of a new language—and, as the word really signifies, a world language. No nation ever spoke Volapuk, no one ever made love or a Fourth of July oration in Volapuk; it is a creation, a homunculus, a scientifically constructed business language. Whether it will live and make a place among its natural born competitors remain to be seen. About ten years ago Johann Martin Schleyer, then a priest of the Catholic church, now retired and living at Constance, Germany, published a scheme of a universal language especially adapted for commerce and international communication, which was briefly as follows:

First, the word forms should be derived from the simplest and most expressive roots of the different living languages.

Second, in structure it should be perfectly regular—the adjective, adverb and verb should be regularly formed from the substantive and invariably of the same termination. There should be one declension and one conjugation and there should be no artificial gender. In a word, it should be a perfect language, selecting the best from each existing language, and rejecting the useless, irregular and difficult.

In accordance with this plan Schleyer and those associated with him have constructed Volapuk.

In order to give a better idea of this "world language" we will take the word "nat," meaning nature, and trace it through some of its grammatical forms. First, its declension—Nat, nata, nata, nati; meaning nature of nature, to nature, nature (accusative). To form the adjective "ik" is added, and we have "natik" (natural). To form the adverb "o" is added to the adjective form—"natiko" (naturally). Every Volapuk noun, whose meaning permits, is susceptible of these changes. Comparison of adjectives is effected by adding the ending "um" for the comparative and "an" for the superlative—jonik, jonikum, jonikon (fair, fairer, fairest). The numerals run easily off the tongue—bal, tel, kil, fol, lul, mal, vel, jol, zul, bala (10), kils (20), etc. The personal pronouns keep the same vowel throughout, as follows: Ob (I), ol (thou), om (he), of (she), os (it), on (one, they, people, men, etc.). To form the possessive pronouns the adjective ending is affixed, as "obik," meaning my.

The conjunction of the verb is a marvel of simplicity. The verb form is composed of three parts: First, the root; second, the personal ending; third, the tense prefix. Taking that old familiar verb "love," we proceed as follows:

I love,	Iofob
You love,	Ilofol
He loves,	Ilofom
We love,	Plural—Ilofobs

To conjugate the different tenses:

I loved,	Ialofob
Thou hast loved,	Iclofoi
He has loved,	Ilofof
She will love,	Iclofof
It will have loved, etc.	Ilofof

The passive voice is formed by the further prefixing of the consonant "p" as polofob (she will be loved). Take even so complicated a tense form as "We shall have been highly honored;" in Volapuk one would say simply "Pulestimobs!"—*Hartford Times*.

YOUNG HOLKS' COLUMN.

Freddie's Match.

[Written for the RURAL PRESS by M. LEE RUSSOM.]

"Aunt Be, will you please lend me your engagement ring? I'll give you my word of honor we'll not lose it," said little Elda, holding up a tiny pink finger, pleadingly, for the shining, pearly, band that glittered here and there as Aunt Be arranged the bric-a-brac over the mantle.

"Why, Elda, what would you do with my ring? It is much too large for your finger. Oh! I know," she continued, teasingly, "you are going to play the old woman

"With rings on her fingers,
And bells on her toes—"

And want my ring for your big toe."

"How funny you are aunt, but you know I wouldn't wear your pretty ring on my toe," said Elda, "I only want it for a little while, to give to Fred, you see, aunt. Fred says this is leap year, whatever that is, and I'm to propose to him. He is to accept me, and, of course, I must give him a betrothal ring; mine are all too small. It is quite annoying to be compelled to borrow yours." Puckering up her brow, as she had seen mamma do sometimes, and looking very much like a miniature woman, Elda's little tongue flew on. "But then, Fred is a very proper husband for me, mamma says, so you must excuse me this time for my Lord's sake, will you not, Aunt mia?"

Smothering a smile, and trying to appear interested, Aunt Be glanced toward the lounge, where the little black-eyed rogue, called by Elda "My Lord," was taking his ease with his tiny boots crossed, and propped up with cushions on a line with his black, curly ringlets. Daintily clasped between two white, tapering fingers is a paper cigarette, while the imaginary rings of smoke curl up and over his head in a white circle far out in the room, seemingly unconscious that his little wife to be is begging a ring to bedeck him with.

"Very well, Elda," said Aunt Be, smiling in spite of herself at the mimic lord, "here is the ring. I hope you and your little husband will be all that is kind and good to one another until leap year rolls around again."

"Needles and pins! Needles and pins! When a man gets married, his trouble begins," sang out Freddie's small voice, between puffs of play smoke.

"Not necessarily so, Master Freddie," said Aunt Be; "but if you are going to be as lazy a man as you are a boy, and make your little wife do all the love-making, I will be truly afraid your song will come true, to you, at least. But I must go now. Don't lose my ring, Elda dear, and after Fred and you are married, I hope you'll teach him that it isn't proper to smoke in the presence of ladies"—and laughing gaily at Master Fred's hurried attempts to gain the perpendicular, Aunt Be left them to their play.

She was somewhat surprised on returning to the morning-room, half an hour later, to hear angry voices, mingled with heart-breaking sobs. As she opened the door to see what the hubbub was about she could plainly hear and see without being seen. Elda was crying and talking at the same time, while Fred was trying in vain to explain something.

Jumping up on an ottoman so as to be taller than Fred, Elda fairly screamed as she stamped her tiny foot: "I hate you, so I do; you are a mean, disgraceful man; you shan't! you shan't be my husband any more now. Oh, what will Aunt Be say? her ring is—"

Here Elda's hat died away into sobs, and Aunt Be came forward, but before she could speak Elda raised her tear-begrimed little head, with curls all mussed and blue eyes red from weeping; she did not look like a very happy sweetheart as she sobbed:

"Oh, Aunt Be, he—" but could say no more, for a big lump just would come up in her mouth.

"Miss Be," began Fred.

"You shut up, Fred Walker, I'll tell her myself," shrieked Elda, finding her voice as soon as Fred spoke.

"Miss Be, if you please, I would—" began Fred again, but was not allowed by Elda to finish his sentence.

"Fred Walker, go home, I tell you, I'll tell my own aunt," stamping her foot in a perfect torrent of rage. "You nasty, bad boy you. Oh! Aunt Be, he swal—"

"Swallowed your engagement ring, Miss Be, if you please," finished Master Freddie, with a very low bow to Be, while Elda hid her head under a sofa-cushion expecting every moment the whole house to come down on her.

"Why, Fred, what do you mean?" said Be, for the first time speaking since she came in. "You surely did not swallow my ring; it must be on the floor. It will kill you if you did swallow it. Oh, Fred, did you, did you?" seizing him by the shoulders in her excitement, churning him nearly to death.

"Yes, ma'am, I did," said Fred as soon as he could gain breath to answer.

"Sure?" said Be.

"Yes'm, sure."

"Oh, what shall I do?" cried Be. "Why, Fred, it will kill you. Here, somebody run for a doctor, quick! Freddie is dying!" screamed Be, almost crazy with fright.

"Miss Be, you must not be frightened. The

ring won't hurt me a bit. I've swallowed lots worse things than that. Why, I've already swallowed two nails, four or five buttons, I don't know how many pennies, and they never hurt me. I swallowed your ring purposely so you'd not marry Jack Inslow. I want you for my own aunt. I know Uncle Harry likes you very much; anyway, enough to marry you if this engagement was out of the way. I've been studying the matter over and come to the conclusion I could make everything work by putting Jack's ring out of the way. I didn't know how else to do it unless I swallowed it. There's Uncle Harry now; guess he heard you screaming. Miss Be, Uncle Harry, will you please tell her I've not been stretching things?"

"Tell her what, my young hopeful?" said Uncle Harry.

"Why, that you do love Miss Be," replied Fred. "Now I'm off to explain things satisfactorily to Jack. Hope he won't take it hard over losing his ring." And before either of them could command their lost faculties, the little tot was half-way across the street.

Jack was sitting in his delightfully cool studio studying up the easiest method of getting rid of two or three of his best girls without choking them to death on French sweets at a dollar per pound, when the door opened, admitting, to his no little surprise, a small boy still in skirts, but with very big, black eyes, who coolly paused half-way across the room and "took him in," as Jack expressed it in relating the story afterward.

"Well, my little man, can I do anything for you this morning?" asked Jack. "Granny sick, hey?"

"No sir, Granny's not sick, for the simple reason she's dead this long time," said Fred; "but I called to see you, sir, on private business, as man with man. I shall rely on your honor to have it strictly private."

"Very well, Mr.—"

"Frederick Walker, sir," said Fred, bowing.

"Very well, Mr. Walker, we'll not be interrupted here; you may proceed," said Jack, thinking this a jolly go.

"It is just this, Mr. Inslow, your engagement with Miss Be is broken off," said Fred, plunging into facts at once.

"The deuce it is!" ejaculated Mr. Jack.

"Yes, sir, that is what I came to tell you. I preferred the engagement broken, so swallowed the ring."

"Swallowed my ring!" exclaimed Jack, jumping up—"broken the engagement? You little rascal, the ring will kill you, and serves you right, too!"

"Not unless the ring is brass, Jack," put in Fred.

"Well, it wasn't brass, and cost me a pile, if that is any comfort to you. But that is not the question; who said our engagement was broken?" demanded Jack.

"I did," replied Fred, coolly.

"You did; well, you'd make a good lawyer with your assurance, young man."

"I've been thinking a little on the subject, cap'n, but I'm yet undecided whether to be a lawyer, bootblack or a dancing-master," said Master Freddie.

"The old geratch will make a dancing-jack out of you if you do not mend your ways," said Jack, who was getting mad, thinking some of the boys were playing a joke on him.

"Gov'ner, there isn't a particle of sense in getting angry over it. I prefer Miss Be marrying Uncle Harry in the place of you. I shall marry Elda very soon, so we will all be one family. Of course it is hard on you, Jack, losing your girl and ring at the same time, but grin and bear it, old man; you can get another almost as nice as Miss Be. If you'll just take it cool and write a note to Miss Be as I tell you, things can then proceed properly, and the old women of town can't talk."

"See here, young kid, who sent you here to see me?" asked Jack, getting an idea.

"I sent myself," replied Fred.

"Did Miss Be want you to come?"

"Anybody with half an eye can see, Jack, that she don't care two straws for you; but she is too much of a lady to say so. No doubt she would have married you some time if I had not taken it into my hands."

"Well, well, this is too funny," laughed Jack. "What is it you want me to write, you young rascal?" asked Jack, seeing the joke of the thing, and, indeed, being a little bit of a flirt, he enjoyed the newness of the transaction. In a short time the note was finished.

"Shall I read it to you, sir?" asked Jack, meekly.

"You may," said Fred, "as I never allow myself to stumble over badly written English."

Smothering a groan, Jack read:

My Dear Miss Grantee:

In our early acquaintance we allowed ourselves to drift into an indefinite engagement. At the time I was sincere in believing that I was offering you the one true love of my heart—the only love that could be laid at a pure, good woman's feet. I have since found out my grave mistake.

But it gives me courage to come to you, depending on your mercy and goodness in allowing the past to be forgotten between us.

Hoping you will allow me to continue your friend, I remain

JACK INSLOW.

"Will it do?" asked Jack.

"It might have been done up nicer if I'd had more time, guess it will do, though; much obliged to you, Cap'n Jack, for your trouble. Hope you'll come around to see us when we get fixed up, but now ta, ta."

Not long since Jack and I as his bride of six

weeks attended the wedding of Uncle Harry and Aunt Be. Freddy was best man and proud, looking often at Uncle Harry to see he was acting just right.

He says, with justifiable pride, that he is the ring better off than he was, along with the experience of match-making.

The joke got out on Jack, of course, and cost him any amount of trouble.

DOMESTIC ECONOMY.

Tested Recipes.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

Peach Cake.—Six eggs, one cup sugar, one cup flour, one teaspoonful yeast powder, one tablespoonful vanilla; beat the yolks, then add sugar, and beat till light; add whites of eggs (beaten stiff) and flour alternately, then flavor. Bake in three sheets; cut some ripe peaches in thin slices, prepare cream by whipping, and sweetening to taste, and adding vanilla. Put a layer of peaches between the sheets of cake, pour cream over each layer and over the top. This may also be used with ripe strawberries.

Minnehaha Cake.—One cup sugar, half-cup butter, small cup sweet milk, two cups flour, two heaping teaspoonfuls baking powder, whites of six eggs beaten thoroughly; flavor to taste and bake in sheets. Filling: Take one teacup sugar, a little water, boil together until brittle; when dropped in cold water, remove from the stove and stir quickly into the well-beaten white of an egg; add to this a cup of stoned raisins chopped fine, or a cup of chopped hickory-nut meats—and place between the layers and over the top.

Cracker Pudding.—One small quart of milk, one coffee-cup of sugar, six Boston crackers, rolled fine, one heaping teaspoonful baking powder, two beaten eggs, a little salt, a large tablespoonful of butter; flavor to taste, bake and serve with sauce.

White Puffs.—One-half pint milk and one-half pint cream, whites of four eggs beaten stiff, one cup flour, well sifted with one teaspoonful of baking powder; one scant cup powdered sugar, a little salt; flavor with lemon, whisk the eggs stiff, then beat in the sugar and add this alternately with the flour to the milk. Beat until the mixture is very light, and bake in buttered cups or tins; turn over, sift powdered sugar over them, and eat with lemon sauce.

Velvet Rolls.—Three pints of flour, one cup sweet milk, one small cup hop yeast, two eggs, three tablespoonfuls butter; work well, let raise, work and let raise again; make in rolls and put to bake when light.

Cream Muffins.—One pint of flour, one heaping teaspoonful of baking powder; sift well together one pint of cream, two eggs, tablespoonful of butter; boil cream and butter together, mix in the flour, add a little salt, and drop in buttered muffin-molds and bake quickly.

Snowballs.—One cup white sugar, one cup thick cream, whites of five eggs, two teaspoonfuls baking powder, flour to make a batter; flavor to taste; bake in small buttered cups.

Chinese Camp.

PRESERVATION OF MEAT BY SUGAR.—It results from a special report made to the French Minister of Agriculture that sugar is an excellent agent for preserving meat, and possesses some advantages over salt. In fact, salt absorbs a portion of the nutritive substances and of the flavor of meat. When an analysis is made of a solution of the salt dissolved by water contained in meat, we find albuminoid bodies, extractive substances, potassa and phosphoric acid. Salt deprives meat of these substances so much the more readily in proportion as it enters the tissues more deeply or acts for a longer time. It then results that the meat, when taken from the saline solution, has lost nutritive elements of genuine importance. Powdered sugar, on the contrary, being less soluble, produces less liquid. It forms around the meat a solid crust, which removes very little water from it and does not alter its taste. Thus preserved, it suffices to immerse the meat in water before using it. Although this treatment costs a little more than preservation by salt, account must be taken of the final result and of the loss prevented, which offsets the difference in cost between the two preservative agents. We think that navigators might profit by this. —*Revue Generale de la Marine Marchande*.

BOILED KIDNEYS.—Split them through lengthwise and run an iron skewer through them to keep them flat; pepper and broil over a clear fire. They should be lightly done. Serve on a very hot dish. Sprinkle them with salt and put a bit of butter on each.

BOILED PORK CHOPS.—Cut not quite as thick as mutton chops and broil over a brisk fire; turn them frequently and cook a dark brown. When ready to serve, sprinkle over them a little powdered sage.

LILY CAKE.—Two cups of sugar, two cups of flour, one cup of cornstarch, one cup of butter, whites of five eggs, one teaspoon of cream tartar and one-fourth of a teaspoon of soda.

CABBAGE SALAD.—Chop fine one head of cabbage, one pint vinegar, one teaspoonful mustard, one teaspoonful sugar, one egg and piece of butter size of an egg.

The Week.

Storms have been the order of the week. Following close upon the apprehensive utterances in our last, the southerly winds began to repay their debt to the north and have continued until the elements were wrought up to a high pitch. Hail and rain on the coast and in the valleys, and snow without stint on the mountains, formed a decided change from the clear sky and dry air of preceding days. The winds were high, dust storms visited the interior, and shipping on the bay was dashed about as it has not been before this winter. The downpour was considerable in nearly all parts of the State, and the season's records are now reaching respectable figures. Corresponding elation is discernible in the spirits of those engaged in producing interests. The storm has, however, been a very cold one, and a rise in temperature will be desirable to push the growth of feed and enable stock to regain a condition of comfort, which is essential to

quick growth or generous production. We do not attempt a compilation of amounts of rainfall, for as we write the storm is still on and the Signal Service promises more rain.

The Tariff in Congress.

As premised in our last issue, the great tariff reform measure which has been so long fore-shown has seen the light in Washington and is now before the House of Representatives. Though we allude to but one measure, it was only made one on Tuesday, because until that time the bills relating to duties on imports and the bill for the reduction of revenue from interior sources had been developed separately. On Tuesday the marriage of the two measures was accomplished by the Democratic against the opposition of the Republican members of the House. The discussion of the measures has as yet hardly commenced, but it will be long, and, no doubt, very warm, and will outline policies for the great quadrennial struggle which will come this year over the election of a new President.

Interest now centers on what the bill proposes. We have, as yet, only telegraphic abstracts, but they probably indicate correctly the main features of the measure. The aggregate reduction of revenue by removal or lessening of duties is placed at \$55,000,000; this total includes about \$22,250,000 on account of the free list; \$18,750,000 on account of woolen goods, \$1,600,000 for China and glassware, \$750,000 in the chemical schedule, something less than \$500,000 on cotton, \$1,000,000 on flax, hemp and jute, and on sugar about \$11,000,000.

The full enumeration of articles to be placed on the free list would consume more space than we can command at this time, and it would probably be safer to await mail advices before attempting a complete statement. We shall therefore cull out articles which are included among strictly agricultural products or manufactures therefrom.

All wools and goat's hair, wools on the skins, shoddy, waste, etc., are placed on the free list after July 1st, and flannels, blankets, woolen hats, knit hoods, woolen or worsted yarns, and manufactures of every description composed wholly or in part of worsted, 40 per cent ad valorem (the present section relating to this class of goods excepts such as are composed in part of wool); woolen and worsted cloths, shawls, and all manufactures of wool of every description, made wholly or in part of wool or worsted, not especially provided for, 40 per cent ad valorem (the present duties on flannels, etc., range from 10 cents per pound and 35 per cent ad valorem to 35 cents per pound and 40 per cent ad valorem, and on woolen cloths, etc., from 35 cents per pound and 35 per cent ad valorem to 35 cents per pound and 40 per cent ad valorem); women's and children's dress goods, coat linings, Italianes, etc., 40 per cent ad valorem. (The present duties range from 5 cents per yard and 35 per cent ad valorem to 9 cents per yard and 40 per cent ad valorem); clothing ready-made and wearing apparel of every description of wool except knit goods is placed at 45 per cent ad valorem (now 40 cents per pound and 35 per cent ad valorem); cloaks, dolmans and other outside garments for ladies and children, wholly or in part of wool, 45 per cent ad valorem (now 45 cents per pound and 40 per cent ad valorem).

All carpets, 30 per cent ad valorem (now ranging from 6 cents per yard for hemp or jute to 40 cents per yard and 30 per cent ad valorem for Axminster and other grades).

Timber of various kinds; timber or lumber, whether hewn or sawed; also wagon and shipping material, and all kinds of wood not specified in the bill; provided the articles mentioned are not subject to duty in the country whence imported, otherwise the present duties to be levied.

Salt is free with the same restrictions as timber.

Vegetables, meats, beans, peas, etc., are to be free.

Flax, hemp and various vegetable fibers, burlaps, not exceeding 60 inches wide, bagging, tin plates and tagger's tin, beeswax, tanning bark, oils compressed from seeds, petroleum and its products, mineral waters and imitation cements, tar and its products, turpentine, preparations known as essential, expressed, distilled and rendered oils, alkalies, alkaloïds and various chemical compounds; bulbs, fruits, nuts, seeds, etc.

The following are among the reductions: Starch is 1 cent per pound (now from 2 to 2½ cents); rice, cleaned, 2 cents, uncleaned 1½ cents (now 2½ and 1½ cents respectively). Paddy, three-fourths of a cent per pound (now 1½ cents); raisins, 1½ cents per pound (now 2 cents); peanuts, three-fourths of a cent per pound (now 1 cent); shelled peanuts, 1 cent per pound (now 1½ cents).

Sugar not above Number 16 Dutch standard is as follows: Tank bottom syrups, etc., not above 75 degrees polarization, 1 15-100 cents

per pound, and for every additional degree 3-100 of a cent per pound; above 16 D. S. and not above 20, 2 20-100 cents per pound; above 20 D. S., 2½ cents per pound. The present duties range from 1 4-100 per cent below 14 D. S. to 3½ cents per pound for sugars above 20 D. S. The lower grade of molasses is unchanged, but that testing above 46 D. S. is reduced from 8 to 6 cents per gallon; confectionery, 40 per cent ad valorem (now 10 cents per pound).

It will be seen from the above that all fruits and nuts are to be free, also olive oil and raisins are to be reduced one-half cent a pound. These are the things which, in connection with wool and lumber, California producers have most strongly striven for, and now that the issue will be made before Congress, it will be in order to exert all the influence possible to save these articles from the crash. We shall recur to the subject at another time.

The Experiment Stations.

Since our last notes on the establishment of agricultural experiment stations in this State under the Hatch law, there has been due progress made in the work. The Regents of the University have approved the plans submitted by Prof. Hilgard for the fitting up of the Central Station at Berkeley, and this includes a cheap but commodious building for laboratories, rooms for seed and other collections, an office, etc., all of which are imperatively needed for the execution of the work. They also approved the proposed expenditure for improvement of the propagating-houses and appliances at Berkeley, which is required, as the propagation of fruit varieties, forest and timber trees, and economic plants generally, will be largely done at the Central Station, and then sent out for planting and trial growth at the outlying stations. It is also proposed to buy tools and machines for use at the several stations. These and other things looking toward equipment will be pushed forward immediately.

Measures preliminary to the location of the outlying stations are also proceeding. As has already been stated, it will be required that enterprising people who desire a station in their neighborhood will have to deed about 20 acres of land to the Regents in trust and furnish money to put up the needed buildings, which it is thought will cost about \$2000 at each station. It is intended now to establish about four of these stations, and they will be placed so that the results of experiments may be significant for a considerable area of the State. Prof. Hilgard has already made two trips to points which have applied for stations, and where the people seem ready to meet the conditions required of them. One of these is in the foothills, which Prof. Hilgard considers fairly representative of the foothill soils and climates, and another is in the central coast district. It is probable that he will commend to the Regents the acceptance of these stations. In Southern California the subject is also exciting interest, and no doubt a satisfactory situation will be decided upon. In the San Joaquin valley there are also steps being taken, as at its last meeting Tulare Grange appointed a committee to confer with Prof. Hilgard. If these locations should be accepted, they, with the grape stations in Alameda, Santa Clara and Fresno counties and the Central Station at Berkeley, will make eight stations for California, to be in operation, or at least in actual preparation for planting, during the coming winter. How many other stations there may be will depend upon funds available. Of course stations are not established merely because some one wants them in their vicinity; but when the locality is representative of quite an area, and the station is to have the advantage of friends who welcome it by aiding in its establishment, it is likely that the institution will go where it is wanted. As we said in our previous article, any community which thinks its claims should be considered should communicate with Prof. Hilgard, to the end that the best selection of location, all things considered, can be made.

Who Is It?

Who sent us a postal note from Middletown, Lake county, without sending his name?

Who did the same thing from Selma, Fresno county, some time ago?

It is impossible to give proper credits unless people will send their names with the remittance. Let all subscribers take notice.

U. S. Irrigation Law.

The measure which was introduced by Senator Stewart of Nevada is probably the one which the telegraph announces as having passed the Senate on Tuesday. It requests the Secretary of the Interior to direct the Director of the Geological Survey to examine the water-courses in the Western States from which water is taken for purposes of irrigation and to locate at various points thereon sites for the construction of reservoirs to hold, out of the abundance of the winter supply of water, sufficient for irrigation in summer. The reservoirs are to be located in natural basins adjacent to the streams from which they will be supplied. They will only be located in such portions of the public domain as are susceptible to cultivation.

This proposition was contained in a bill introduced by Senator Stewart early in the session and mentioned in our issue of Dec. 3, 1887. As the Government now owns most of the land which would be needed for these storage reservoirs, and has also vast areas which would be made productive by them, it is properly a subject for national enactment. The question of storage reservoirs has long been considered in this State as the solution of the problem of securing water for our vast arid areas. Some notable works have already been completed by private enterprise, but they are only the beginning of what can be done to secure an immense valuation for lands which are now worthless. There is plenty of water, if it be saved when most abundant, to supply every foot of land which can be reached with it. The United States would gain immensely in sale of lands now vacant and open up a field for the energy and capital of thousands of people now seeking homes in the West. But this law, as we understand it, only calls for a careful survey of the region and location of places fit for reservoirs, etc. This preliminary step to a great work should certainly be taken. It will also give the Geological Survey a chance to do a little agricultural work, as the law provides, which will be a good thing, too. The measure seems very promising and likely to succeed.

The Grape-Growers.

The grape-growers are in session as we write, and we cannot outline the meeting this week. The meeting of the State Society resulted in the adoption of the proposition to organize a Wine Exchange, something on the plan of the Produce Exchange, and a committee of nine was appointed to submit a plan in detail. Prof. F. Pohndorff was elected representative to the International Congress to be held next May at Madrid. Resolutions were adopted concerning taxing wine and duties upon imports which we will give next week.

The general convention opened on Wednesday afternoon, with a good attendance. The wine exhibits are numerous. T. C. White of Fresno read an interesting essay on raisin-making, which we shall publish at another time. The convention will continue during the week and promises to be very successful.

THE SORGHUM SUGAR PATENT.—Washington dispatches state that the Attorney-General is bringing suit against Magnus Swenson, the purpose being to cancel the sorghum sugar patent taken out by him. The bill of complaint sets forth that Swenson's discoveries were made while he was in the employ of the Government and receiving a salary for conducting experiments in that line; that the improvement is of great public importance, and that research was made by the Department of Agriculture to the end that this industry should be made available and remunerative to all citizens who desired to engage therein; that the respondent is demanding large sums of money for the use of this process, so as to establish a monopoly and grievously oppress the people upon invalid patents. The Commissioner of Agriculture, referring to the bill, says he is informed a trust is being formed to control the manufacture of sorghum sugar by means of the Swenson patent. He says the case of the Government is very strong.

SOAKING WHEAT IN ACETATE OF LEAD.—At a French agricultural school wheat is soaked in acetate of lead solution six hours before sowing. The seed is said to germinate more quickly and grow more vigorously than wheat subjected to any other fertilizing treatment.

Prof. Budd on California Fruit-Growing.

In our report of the meeting of the State Horticultural Society in last week's *RURAL* we alluded to some remarks by Prof. J. L. Budd of Iowa, and promised at another time a fuller statement of his observations and deductions drawn therefrom. This promise we redeem this week in the form of an interview, the questions being framed so as to draw out Prof. Budd's views without suggesting California opinions upon any of the points advanced. Prof. Budd's views will be read with great interest at the East where he is so well known and highly esteemed, and his favorable decisions concerning California will aid in our advancement. He is professor of horticulture and forestry at the Iowa Agricultural college. He has been secretary of the Iowa State Horticultural Society for 14 years. He has been associated with the foremost horticulturists of the farther East in mutual aid and esteem, and when the distinguished Charles Downing died he made Prof. Budd legatee of his very valuable horticultural library and unpublished note-books and papers. In 1882 Prof. Budd visited Europe and the great east plain of Asia to search for fruit varieties suited to the hard climatic conditions of the Northwest and Canada, and secured a fine collection which are now being propagated and tested. It is likely that our College of Agriculture will secure a selection for trial planting at the experiment stations in different parts of the State. The following is the

Interview With Prof. Budd:

What conclusions have you reached in regard to profitable commercial fruit-growing on the Pacific Coast?

This is a broad question. Taken as a whole, the immense stretch of country from the Oregon line to Mexico is so varied in soil, elevation and climate, that the most favorable conditions can be found for the profitable growing of every one of the temperate zone and sub-tropical fruits of the world. Yet there is little foundation for the popular belief that a large number of species or varieties of the fruits can be profitably grown for distant shipment on any one farm or in any one neighborhood. To illustrate: The soil, elevation and exposure to the desert winds of the Riverside fruit lands seem to be specially favorable to the perfect development of the citrus fruits, but the older settlers have found that the apple, pear, plum, apricot and cherry cannot be made profitable in a commercial way.

Yet at the Riverside Fair grand specimens of the apple, pear, cherry and prune were exhibited, grown only a few miles distant, at an elevation of nearly 3000 feet.

Again, the soil and climate of the San Joaquin valley near Fresno seem specially favorable for the perfect growing and the perfect drying of the raisin grapes, and to the perfect maturation of the wine grapes. It also seems remarkably well adapted to growing and curing the White Adriatic and Smyrna figs. But the amateur growers of the apple, pear, cherry, plum, apricot and prune cannot consistently urge their friends to plant them for profit, yet they will hasten to state that the elevated valleys of the Sierra Nevada range will grow all these fruits in perfection.

Your conclusion, then, would be that each locality should make a specialty of the two or three fruits which have proven best fitted for its special soil, elevation and exposure?

Yes. Even if we admit that a dozen or more of the fruits will succeed perfectly in one locality, it will prove best to concentrate the energies of the producers on the systematic growing and neat and methodic packing, canning, crystallizing, or drying of the fruits selected for shipment to a distant market.

In America and Europe it will ever be found that special localities may attain a reputation for the perfect growing and packing of special fruits, but rarely, if ever, if they attempt a system of mixed planting and handling.

Among the many advantages of co-operative union on two or three specialties is the methodic and united effort to keep down the noxious insects.

On the other hand, the mixed planting on the "happen-so" principle of beginners always leads to waste and uncertain profits.

In connection with an old resident, we made a careful estimate of the losses the past season

around a noted fruit town in the south part of the State. The land for miles around the town has been planted in a mixed way by amateurs, in plots ranging from 2 to 15 and 20 acres. We found that the crops of over 200 acres of peaches, 150 acres of apricots, over 50 acres of prunes, 200 acres of grapes and many scores of acres in the aggregate of apples, pears, plums, cherries, quinces, olives and almonds had been permitted to go utterly to waste.

The fruits had come into bearing ahead of the establishment of a cannery, dry-house, winery or any other needed facility for handling or packing the fruit for a distant market.

Even in this older part of the State we see at Fruitvale, Haywards and at other points much evidence of waste and loss growing out of the mixed planting of about everything the nurseryman has to sell.

Do you think it possible to overstock the markets by pushing the specializing system of fruit-growing? For instance, is it possible to produce too many raisins, too much wine, or too much first-class dried or canned fruit?

cial fruit-growers, the planting of the deciduous fruits of like countries of the world should be encouraged.

The introduction of new fruits is attended with difficulties, should such work not be intrusted to our Agricultural college at Berkeley, especially at this time when the liberal provisions of the Hatch Bill are available for just such uses.

The friends of the Hatch Bill have urged from the start the pressing need of experimental work of this character in every State of the Union. But I know of no State or section of the world where systematic trial stations are as much needed as in this extremely varied State.

It is now the decided opinion of experienced fruit-growers that many of the hot, dry, interior valleys of the State will never grow first-class apples, pears, cherries, plums, apricots, or some other desirable fruits. Yet parts of the Old World are in climate and soil almost, or quite, identical with these sheltered valleys, yet they are able to grow as fine varieties of these fruits as can be grown in Michigan.

THE LATE ASA GRAY.

In products, as in professional life, there is always room upstairs. The world has not many spots where nature has given as perfect facilities for the growing and drying of certain fruits, such as the grape, the apricot, the prune, the peach, and the fig, as can be found in certain select localities on this coast.

In the Old World the products of sections where special fruits have been grown for ages now seem to be degenerating. If California can produce dried fruits, canned fruits, crystallized fruits, etc., of better quality, and put up in better shape than can be found in Europe or Asia, she can rule the market, even in London or Liverpool.

If we admit the increased profit of special planting and special packing and marketing, we must not forget that our State is rapidly becoming a haven of rest in a favored climate for thousands of home-seekers. Will not these home-makers wish a full collection of the fruits, shrubs, and plants that can possibly be grown in their locality?

Without doubt, yes! In the Sacramento valley, in most of the Northern valleys and at many other points modified by the breath of the Gulf Stream, the amateur can safely make a wide selection from the lists of the local nurserymen, though these lists are almost an exact reproduction of those of Rochester, New York.

But in the great San Joaquin valley and in all the mountain begirt valleys in South California, on homesteads, even of the commer-

cially in the interior sections requiring irrigation.

A critical examination of the leaves of the Duchess apple or the Chinese snow pear will show special provisions for endurance of a dry, hot air. In like manner, any one of the fruits and shrubs or trees of East Europe will show from one to three more rows of palisade cells in the leaves than is found in those of South-west Europe.

Do you think it right for the Agricultural College to propagate trees for general distribution in the State? Some say it would be running opposition to the nurserymen.

We have had some talk of this kind in Iowa, but it is all nonsense. The growing of a few thousand trees and plants for distribution to trial stations in the State for the advancement of the horticultural and forestry interests would soon bring credit to the central station. Already the college grounds at Berkeley have many rare trees and shrubs which should be propagated and distributed.

Prof. Budd and family started homeward from Oakland at the close of last week, promising to return at another time for the study of the fruit regions of the State which he did not find time to visit. He is evidently much pleased with what he has seen in California, and has caught the California fever enough to lead him to plant out a piece of land, which he bought during his visit, as a private experiment station for the trial of rare growths which he finds not grown here.

Portrait of Prof. Gray.

We give on this page a portrait of the late Asa Gray, engraved from a photograph kindly lent us by Prof. J. G. Lemmon, who wrote for us the excellent sketch of Prof. Gray which appeared in the *RURAL* of Feb. 18. The death of the eminent botanist has been the occasion for the most impressive and sincere expressions of regret and bereavement throughout the whole scientific world. We are sure that our readers who had not the fortune to know him personally will be glad to have the sight which our portrait gives of his thoughtful, kindly countenance.

A FLOUR TRUST.—Advices from the East of Feb. 10th report that commercial circles were at that time excited over the report that the large flouring-mills of the country were about to form a gigantic trust to keep up the prices. A thorough search among manufacturers and dealers brought to light the interesting information that the rumors were in part true, and that the trust was really in a fair way to successful completion, that the great mills of Minneapolis, Detroit and the Northwest are the prime movers in the scheme, and that a well-known lawyer in Boston had been retained as attorney to represent the Eastern interests. The idea is to lay out the wheat-fields of an immense territory and send out buyers. The plan is to keep out all outsiders by resorting to a system of discouragement. Should an outsider turn up at a station and bid for wheat, the combination can bid five or ten cents higher and shut him out. The extra price paid did not amount to much when averaged up with the purchases over the entire district. The arrangement with the mills was that each must take its quota of the wheat daily and each pay the pro rata amounts called for by the agent. If any mill wanted any more than its share on any given day it could get it by bidding up the price and paying the difference into the pool. The great object in the way of success is the various brands used, all of which have a special value which any retrenchment will injure.

ITALY AND CALIFORNIA.—At the annual meeting of the Italian Chamber of Commerce, held in this city March 1st, Secretary Dondero reported that during the year 468 communications relating to commerce had been received from Italy and responded to. Fifty samples of California products had been sent to Italy, and over 200 samples of that country's productions had been received. The expenses incurred by the Chamber during the year reached \$1853.47. Imports of merchandise from Italy during the year amounted to \$357,812, as against \$168,700 for the year 1886.

G. L. BERRY, ranchman of Laramie, Wyo., has killed 14 bears this winter.

QUERIES AND REPLIES.

Cutting Brush to Kill.

EDITORS PRESS:—Not having seen any answer to the above inquiry, a few weeks ago, I take my pen to give a little of my experience and observation.

But first I will say that the general health in Lake county is too good to catch the "boom" in its virulent and aggravated form, yet I think we had our share of the blizzard or cold wave.

Everything now, though somewhat late, is lovely and prospering. While in places the rage is for planting forest trees, we, here in Lake, are more interested for a cheap and easy way to kill the brush and trees to clear the land. The oak and the chemical are the most liable to sprout. Now the time that they can be killed by chopping without digging entirely out is very short and does not come exactly the same time or month every year. For the evergreen oaks and other evergreen brush, the time is late in the fall, just before the coldest weather sets in in November or December.

The "grubs" or oaks that shed their leaves have to be treated entirely different. Their time is in spring or early summer at their most vigorous growth. Suddenly deprived of their leaves, the stump and roots are overcharged with sap, some kind of fermentation sets in, and I have seen the timber mold and commence to decay in a few days when it was very warm weather.

Of course, in the light of science, it cannot now be admitted that a tree or plant is ever entirely dormant or ceases its vital activity unless it dies. In the cases of the evergreen, if they are cut just before the coldest weather in which they are the nearest dormant, the length of time before they can put leaves out again kills them.

The brush fires generally happen in August or September, so they start out again in the warm weather. But I have burned chemical and brush later on in the season and not a vestige of a sprout was ever seen.

The roughest, toughest, most unsightly and persistent thing is the oak "grub," yet it may be made an interesting subject of observation. In the open, hilly parts of California it is generally present. The acorn starts up the first year but a few inches above the dry, hard ground, but the root runs four or five times the length of the top. Now year after year the stock browses it, the fire runs over it, worms gnaw and sapsuckers drill for 15 or 20 years, but every season new sprouts start from the tenuous and growing root. I have often seen from one root a dozen or more scraggy branches two or three feet high half dead. Then by some happy concurrence of circumstances, and under the protection of the scraggy mass, one or two sprouts would shoot up rapidly above the reach of stock and soon assume the dignity of a tree. Sometimes I have attempted to assist the incipient tree by clearing away, so as to throw all the growth into one shoot. But alas! like gratuitous advice it failed to accomplish any good, for it often fell a prey to some accident; perhaps it would be from the depredations of the inevitable "sapsucker that never sucks sap," as one writer for the RURAL called him awhile ago; but somehow I never could believe he was such a testotal abstainer as to never take a drink with his worms. C. P. SCRANTON.

Lower Lake, Cal.

These notes are very interesting. Will not other readers write of what they have done or seen in land-clearing and brush-killing? As many are now engaged in reclaiming waste lands, the subject will be widely interesting.

Keeping Buds Dormant.

EDITORS PRESS:—How shall I keep buds dormant? Some say in damp earth, in a dark place, or bury in the earth, or cover up in a box. Shall they be wholly covered up or leave one end out?—SUBSCRIBER, Los Angeles.

Scions can be kept for some time merely by burying the sticks at the base of the tree from which they are taken, covering about half their lengths in the soil; or if they start too soon in such a situation, by burying them half-way in the earth on the north side of a barn or outbuilding out of reach of the sun, and covering with an inverted box or barrel. The earth should be moist, not water-soaked; that is, not where water stands. This usually keeps the buds dormant as long as necessary in most parts of the State. On an unusually warm day cover the box with an old sack and throw a pail of water over it occasionally and it will cool down by evaporation. Remove the box at night and allow the heat to radiate, and cover again early in the morning. Such a treatment ought to do as well as any, except by the use of ice for cooling.

COLORADO LAMBS.—A farmer in Colorado has Southdown lambs six months old that weigh 140 pounds each, and it has been estimated that they will clip at least 12 pounds of wool each when they shall be 14 months old. As extra mutton now sells at eight cents per pound for sheep in lots, each of the above is worth \$11.20.

The Firewood Business.

The high price of coal and the better use for their time which wood-choppers in some parts of the State are finding, has brought prices of stove wood and charcoal to an elevation not known during recent years at least. The managers of the Donahue road in Sonoma county have issued a circular intended to stimulate the production and shipment of wood over their line to San Francisco. Though the circular in some respects seems to be written in the interest of the transportation traffic rather than of the wood-producer, the statements are interesting enough to warrant publication:

It is a well-known fact that for the past four years the wood business has been carried on at almost a loss to the producers; they have made but little above the actual cost of production. This not only applies to those producers situated where their transportation must be by rail, but the same applies to producers on the coast where transportation to this market is by water. The larger part of the wood coming to this city comes from the coast and balance by railroads leading to the bay. Herefore on account of the great supply from the coast, prices have been kept down, as buyers use inland producers to beat down prices on the coast and use coast producers to beat inside prices, but the time has come that this can't be done. The coast producers have to a large extent quit making wood and have turned their attention to lumber, railroad ties, posts, pickets and shingles; their reasons for doing so are two-fold. First: On account of the low prices obtained heretofore, and more profit in making the above articles. Second: The fact that they are well aware that after cutting their wood they cannot get it to a market on account of the scarcity of vessels.

For the past six months the demand for vessels to carry lumber, shingles, posts and railroad ties has been so large for San Pedro and San Diego that tugs have been employed to tow sailing vessels from the Sound, Humboldt and Mendocino to the southern coast ports to save time, and the same vessels towed back empty. It has been almost impossible to charter at all for San Francisco, and there are very few vessels engaged in carrying wood. Sailing vessels prefer lumber, etc., to wood, and owing to the difficult and dangerous places for loading, and the high rates of insurance on vessels going to those places, they are asking higher rates for carrying wood than for lumber. It is almost impossible to get a vessel to go for wood at any price. If this is the case during the winter months, while there is hardly any building going on, what can be expected in the spring and summer, when the demand for lumber will be ten-fold greater? The woodmen on the coast can see this and also see that there will be a very slim chance to get wood to market after it is cut, and for that reason are not wasting time and labor in that direction. Even during the winter the demand for lumber in the southern part of this State is far in excess of the supply. This being the case, there is no chance of coast wood coming to San Francisco in any amount. This will cut off at least 50 per cent of the supply and throw almost the entire wood business on to the railroads, and the supply being below the demand, good rates will rule. Wood is selling for more in San Francisco now than at any time in the past ten years. In fact, it is readily taken at almost any price. The largest consumers of wood are the brick-yards, and they have heretofore had more or less wood left over to start the next year's work, but this year they are entirely out of wood and almost out of brick. They must start to making brick as soon as the weather will permit (probably by May 1st), and must have wood at any price. They cannot use anything else. Where is it to come from unless you benefit by this warning and be prepared to meet this coming demand at good liberal rates? You cannot expect to meet this market with green wood after the rush comes.

In order that you may know about who and what the different woods are used for, I will take each separate.

Peeled or Tan Bark Oak.—The highest priced wood that comes to this market. It is used principally by the Chinese for stove use and is cut up small. Also used for stove wood by those who prefer wood to coal. Price ranges from \$9 to \$11 per cord when delivered here.

Block and Live Oak.—Cut into stove wood and used in place of coal. Also used in some cases for steam fuel. Price ranges from \$8 to \$9.50 per cord.

White Oak.—Used by brick-yards and for steam fuel. Price ranges from \$7 to \$8.50 per cord.

Pine or Fir.—Used by brick-yards in preference to any other kind of wood. Also used exclusively by the bakers. This is the choice wood and more in demand than any other. Price ranges from \$8 to \$10 per cord.

Redwood.—Used by brick-yards and for kindling wood by wood-dealers and the Chinese. Price ranges from \$7 to \$8 per cord.

Tan Bark.—Used by tanneries exclusively. Price ranges from \$17 to \$20 per cord.

Charcoal.—Used by the Mint, all hotels and restaurants, and by the Chinese. Price ranges from 45 cents to 60 cents per sack.

The rates of freight on above articles to Tiburon will be as follows:

Kind.	Cloverdale and points south.	Points north of Cloverdale.
Peeled or tan bark oak...	\$2.50 per cord	\$3.00 per cord
Block and live oak.....	2.25 " "	2.50 " "
White oak.....	2.00 " "	2.25 " "
Pine or fir.....	2.25 " "	2.50 " "
Redwood.....	1.87 " "	2.00 " "
Tan bark.....	3.15 " "	4.00 " "
Charcoal.....	24.00 " car	30.00 " car

The above rates are for carloads of eight cords of four-foot wood.

When cutting for San Francisco market cut only four-foot wood, as stove wood will not sell. It would be well to consider the fact that a little care in trimming the knots down close when chopping wood increases its value from 50 to 75 cents per cord. The schooner rate on all kinds of wood from Tiburon to any brick-yard, Oakland or San Francisco, is \$1 per cord in lots of 32 cords or over (32 cords being a schooner-load). Along the line of the Cloverdale & Ukiah railroad there are large quantities of fine, large white oak timber, and to those in that section I would state that Ludwig & Kroncke of the Santa Rosa Planing-Mill have made a liberal offer for white oak logs. They will pay \$8 per 1000 feet for white oak logs (cut from the body of the tree between branches) in lengths of 8, 10, 12, 14 and 16 feet delivered on car at any station on C. & U. R. R. and S. F. & N. P. R. R. This is for the full measure of the log inside the bark at the small end of log. This will pay about 45 per cent more than cutting same into cord wood, and balance of the tree can be cut into wood. As the body of the white oak is very large and straight, this item is worthy of attention. They will also buy laurel, maple, locust, ash and oak logs, delivered on cars, at good prices.

In the near future this company will transfer cars from Tiburon to San Francisco, thereby giving shippers a better market and a saving on schooner transportation.

CHAS. THORN, JR.
General Freight Agent.

TANNING SHEEP PELTS.—We are asked how to tan a sheep pelt with the wool on. It is a question that frequently comes to us, and it would be well if those who think they will need it would preserve these directions: Wash the pelt in warm water and remove all fleshy matter from it. Then clean the wool with soft soap and wash thoroughly clean. When the pelt is perfectly free from all fatty and oily matter, apply the following mixture to the flesh side, viz.: For each pelt take common salt and ground alum, one quarter-pound each, and one-half ounce of borax. Dissolve the whole in one quart of hot water. When sufficiently cool to bear the hand, add rye meal to make it like thick paste. Spread this mixture on the flesh side of the skin. Fold the pelt lengthwise and let it remain two weeks in a place that is airy and shady. Now remove the paste, wash the pelt and dry it, but before it is dried, and when nearly so, scrape the flesh side with a crescent-shaped knife. The more the pelt is worked, the softer it will be.—Western Rural.

ART WORK FOR EASTER.—We have had the pleasure of examining the beautiful art work for the Easter season published by L. Prang & Co. of Boston, represented on this coast by J. H. Dorety, 529 Commercial street, S. F. These goods are to be found at the best stationers' and art stores, and should find their way into all households, as they are elevating in their influences. The collection embraces cards from the most modest to the most elaborate, all beautiful and appropriate in design and execution. There are also novelties in paper and satin, some of which have much of the justly-prized handwork. Delicate landscapes, birds, Easter lilies and other spring flowers are largely represented, and lovely children and maidens add the human element to the line. Among the more pretentious works are sachet bags, handkerchief cases and the like, all with the Easter emblems; also books and booklets embodying fitting devotional sentiments. Prang's work will result in making Easter another Christmas, so far as gift-making goes, and we don't know but that will be a good thing for both givers and recipients.

COMPARATIVE CONSUMPTION OF TOBACCO.—M. Paul Leroy-Beaulieu gives figures showing the quantity of tobacco consumed in the different countries of Europe. The rate per 100 inhabitants is, according to him, as follows: Spain, 110 pounds; Italy, 128 pounds; Great Britain, 138 pounds; Russia, 182 pounds; Denmark, 224 pounds; Norway, 229 pounds; Austria, 273 pounds.

A VETERAN SONGSTER.—Geo. F. Bronner of Sacramento has a remarkable canary bird. The Record Union says he was presented to Mrs. Bronner 18 years ago, has daily filled their home with his merry warblings, and still sings as sweetly as ever. He has been blind several years, but this does not in the least affect his singing.

A BRONZE TURKEY, exhibited at the N. Y. Poultry Exchange show last month, stood three feet six inches high, measured four feet eight inches in length, had a spread of wings from tip to tip of seven feet four inches, and weighed 48½ pounds.

SECURED BY CULTIVATION.—The cinchona bark obtained from the Java cultivated plants, because of their greater medicinal yield, brings two or three times the price of the bark brought into the market from the South American forests.

HARDWOOD LUMBER FOR HOUSE-FINISHING.

—A Chicago paper says: In other countries the general use of hardwood lumber is taken as a matter of course. But little more than 10 years since it would have been hard to find a firm in Chicago doing business in hardwood lumber exclusively, except perhaps for use in the manufacture of furniture. To-day this is entirely changed. No house of any pretensions is erected that has not more or less hardwood trimming, and usually in the entire trimming, as well as the floors, nothing but hardwood is introduced. This is not altogether because the architectural taste has changed, but largely because many of the hardwoods, such as maple, ash, oak, and even cherry, can be furnished dressed for less money than the same grade of soft pine can be obtained. One firm, and probably the largest in the line in the West, Hayden Bros., have a yard covering six acres of ground, in which there is nothing but hardwood lumber. The yard is centrally located, with ample track facilities, and within it is piled over 6,000,000 feet of hardwood lumber of all descriptions. Sheds are built for the storage of fine mahoganies, etc., and large drying kilns enable the firm to deliver kiln-dried lumber on short notice, and not only supply the local market, but ship to all parts of the country.

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land?

DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?

DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10 acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

HARVESTER FACTORY IN PROSPECT.—San Leandro Reporter, March 3: Geo. Stockton Berry of Visalia, the inventor of a steam harvester, which has been running successfully for the past two seasons, was in San Leandro last week, looking for a site for a manufactory near the railroad station. He was very favorably impressed with our town and considered that it had great advantages as a manufacturing point on account of the excellence of the climate, nearness to the city, and the low price at which the necessary amount of space could be obtained.

Amador.

RURAL ACTIVITIES.—Mt. Springs Cor. Dispatch, Feb. 21: This neighborhood has taken quite a boom in farming this season. From Miller's to Boyce's station there is certainly 25 per cent more land plowed and sowed than ever before, and still the good work goes on. There are some new arrivals here from the frigid zone of Dakota, named Lamb. Mr. Lamb has bought 750 Muscat grape-roots, 40 fig trees and a number of olive cuttings, and is putting out grape cuttings for a starter next year. Orrie Jones on the Mocking Bird ranch is setting out grapes in addition to his present vineyard. The Bion Bros. have about 20 acres in grapes and fruit trees in bearing this year. They have also sown several acres to alfalfa. The purchasers of the Silver ranch will be up in about two weeks with olive trees to set out 80 acres.

Calaveras.

INDUSTRIOUS PLANTERS.—Valley Springs Cor. Prospect, March 2: Mr. Pattee is planting a large lot of apricots and will also plant raisin grapes. Mr. Edelon is busy on the Stevens farm with all the help obtainable in the vicinity. He will plant 34,000 cuttings of the choicest wine-producing varieties. He has drafted the Japanese colony, women included, into the service. Mr. McKee from Sacramento will plant ten acres in choice fruit trees, principally prune. He is putting his tract in fine order. Mr. Geibe will plant 10,000 cuttings, mostly of the raisin-making kinds. Mr. Lemon has been battling brush and has planted five acres of olive trees. He has also planted 200 peach and apricot trees, besides adding some to his vineyard. Mr. Will Turner, who has charge of Henry Turner's ranch, has planted a small olive grove and also a mixed lot of deciduous trees. He, too, is trying his hand at alfalfa-growing and puts in his leisure hours making stone fences. The grain sown in the surrounding country is looking finely, and the acreage is larger than ever before. Thus you see that the season of '88 opens with decided marks of substantial progress in old Kay Paverons.

Colusa.

"COALS TO NEWCASTLE."—Colusa Sun, Feb. 25: Last Saturday two freight cars on the narrow gauge were required for a shipment of trees from L. F. Moulton's nursery to the lower country. This shipping of nursery-stock down the country is something new. However, Mr. Moulton has taken extraordinary pains with his nursery, and has it free from pests, and every tree is what it is represented to be.

WILD PIGEONS.—The point of timber south of Arbutuck is full of wild pigeons, much larger than the tame one or the wild bird of the East. There are birds there by the tens of thousands, and the sport is said to be fine. When we were in there surveying on the canal a fortnight ago there was a continual bang of guns in all directions.

Fresno.

PLANTING ABOUT KINGSBURG.—The Herald reports that the setting out of nursery stock is going on briskly in the vicinity of Kingsburg, and gives a list amounting to 375 acres just planted or being prepared to plant to vines and fruit trees.

POSTPONED INDEFINITELY.—Fresno Republican, March 2: After vainly endeavoring to arrange the work of the committees in a systematic manner, and get the members to go to work in earnest, the few gentlemen who have interested themselves in trying to get up a rabbit-drive in this county have concluded to give the matter up entirely.

Inyo.

DISTRICT FAIR.—Inyo Index, Feb. 29: On Saturday last the Board of Directors of the 18th District Agricultural Association met in Independence. Present—Pres. A. R. Conklin and Directors Nathan Rhine, Wm. Walker, Wm. S. Enos, Wm. K. Miller, Thos. J. Goodale and John Shepherd. It was determined to hold the Second Annual Fair of the Association at Independence, commencing Monday, Sept. 17, and closing Friday, Sept. 21, 1888. Monday will be devoted to arranging exhibits, and the pavilion be opened to visitors on Tuesday. There will be racing each day during the week. A liberal premium list will be arranged and advertised in due time.

THE INYO ARTESIAN COMPANY has filed articles of incorporation. Its purposes are to prospect for water and sink artesian and other wells in the county of Inyo. Its directors for the first year are: Samuel D. Thurston, John A. Hannah, Patrick H. Mack, Henry Rhine, I. J. Woodin, all of Independence. Capital stock, \$10,000, divided into 2000 shares, of the par

value of \$5 each. Actually subscribed, \$250. The Inyo Artesian Co. means business and will purchase necessary machinery and begin boring wells just as soon as sufficient stock is disposed of to justify the work.

AGRICULTURAL ASSOCIATION.—Independent, March 3: The Association owns $4\frac{1}{2}$ acres of land within the limits of the town of Independence. This is all inclosed by a tight-board fence seven feet high, and within this inclosure is a large and well-constructed pavilion. In addition to this is a fine mile track, with grand and judges' stands, half a mile south of the town limit. All this is valuable property and will speedily become more valuable. The encumbrance upon the property only amounts to \$1904 and is all held by one member of the Association. Mr. T. J. Goodale of Fish Spring generously offered to give a large number of shade trees for setting out in the Association park at Independence. These trees are now being transplanted, are already large, grow very rapidly, and in three or four years will make fine shade.

Lake.

PIGS AND MEASLES.—Clear Lake Press, Feb. 25: During the prevalence of measles lately, at Long valley and vicinity, Hiram Kennedy's children were the first to be taken. His little boys had picked up a litter of young orphan pigs and made pets of them. During the cold nights they would box their little pets and put them in the house. In due time, after the boys were prostrated with the disease, those little pigs broke out with an eruption all over the body exactly like that upon the children. They whined, squealed and scratched, and got just as sick as any urchin—in fact, four out of the litter got too sick and succumbed. Of the two that survived, one is blind and the other is going into consumption. This may all be regarded as a joke, but Mr. Kennedy, who is entirely reliable and reputable, can never be convinced but that those pigs had the measles.

Lassen.

ABOUT LAKEVIEW.—Cor. Mail, Feb. 20: Everything is progressing nicely here. Farmers are all very busy now, plowing and sowing their crops. I notice improvements on several places, new fences, preparations for building, etc. The water is fast receding in Honey lake again; not more than half the surface seems to be covered. Of course when the snows in the mountains melt, the streams will rise considerably.

SPRING NOTES.—Susanville Cor. Reno Gazette, Feb. 23: After a season of real winter weather, some of which was noted for its unprecedented coldness, spring, real spring weather has put in its appearance, relieving the valleys of their covering of snow, thereby hurrying up the farmers a month at least ahead of former seasons. The opinion now prevails that most of the fruit buds of the peach and cherry trees were killed during the winter. Many vegetables, especially potatoes, are found to be frozen, but there was a large crop last season, so that nothing like scarcity is feared.

Los Angeles.

MORE BARLEY has been sown in the neighborhood of Anaheim this season than for years previous. One correspondent states that some of the vineyards have been dug up and sown to barley.

FARM NOTES.—Cor. Bulletin, March 3: The rains have come just right for farmers, and every foot of land that is cultivated will produce a crop. The farmers have all made money for the past two years, and have planted large crops this year. In the line of hay and grain and dairy produce, there is not much to export. It is all used at home, and the only trouble is, there is not enough. Fancy prices are paid here for choice dairy products. The wonder is that more people do not engage in this branch of farming. Two ladies, formerly schoolteachers, cleared \$2500 last year from a ten-acre farm near this city. The income was derived from small fruits, a few cows, and poultry.

Monterey.

BARLEY IN DEMAND.—Salinas Index, March 1: There has been quite a lively movement in barley here during the past few days, orders having been received at Ball's warehouse for 50 or 60 carloads, and for as much more at Spence's Switch. About 4000 sacks were sent from Salinas yesterday. It goes overland to Chicago.

IN THE FASHION.—Sinclair Ollason last Monday evening finished setting out 2000 fruit trees on the land recently purchased by him from August Johnson, near Natividad. The trees consist of apples, apricots, French prunes, pears, peaches, etc., of the best varieties.

Napa.

FINE HORSES.—Mr. T. C. White, the proprietor of Russian vineyard of Fresno, while in St. Helena this week, purchased through F. W. Loeber, a handsome carriage team owned by H. W. Crabb, for \$1200, said team being a pair of Whippleton colts. He also purchased the young stallion, Alcona Chief, from Mr. Loeber, for \$500, and the spotted team owned by S. W. Kenyon for \$450. This speaks well for the horse interests of this section, when men come from Fresno to purchase fine driving horses at long prices.

Nevada.

SNOW AND BLOSSOMS.—Grass Valley Tidings, March 3: Snow for the last two or three days and the ground is all covered with white! There must be a beautiful sight at Isaac L.

Weed's orchard, north of Alta hill, where some of the fruit trees are in bloom. Miss Ella Weed brought us two days ago a bough of an apricot tree and it was one mass of beautiful blossoms. The spring flowers and the snow coming together enhance each other's beauty; and, moreover, the snow is not going to prevent the flowers from developing into fruit.

PLANTING WALNUT ORCHARDS.—Transcript, L. Charonnat is making preparations to plant 2500 preparturiens walnut trees at his farm on Canada hill, in Nevada township. The land has been fenced and will be put in prime condition for the reception of the trees, which were raised from nuts planted last year by Mr. Charonnat. A. Isoard has ordered from France several thousand Franquette walnuts, and when they arrive he will plant them in the immediate vicinity of Nevada City. The Franquette is an extra large nut with a full and rich meat, has a soft shell, and does not blossom until so late in the season that all danger from frost has passed.

Placer.

NECTARINES.—Auburn Republican: John Boggs says that people will plant more nectarine trees when the fruit is better known and appreciated. As yet it does not bring quite so good prices as the peach, but that is because people do not yet understand it. All the shippers, however, like to have a few boxes to put in a car of fruit, and Mr. Boggs recommends the Boston variety.

Sacramento.

PUTTING OUT SHADE TREES.—Record Union, Feb. 25: Dr. Obed Harvey and John McFarland of Galt were in Sacramento yesterday making selections of a large order of shade trees. They propose to add to the attractiveness of that locality by planting trees that will provide shade and ornament at the same time. Among the improvements in this direction, Dr. Harvey, Mr. McFarland and the Sargent Bros. will plant trees on both sides of a driveway or avenue extending four miles in length, out from Galt to McFarland's residence. The varieties to be planted are Monterey pines, umbrella trees, sour orange, red and blue gum trees, cork elm, black walnut and acacia. The example being set by Galt should be followed by all towns and cities in the State.

A STRANGE CHICKEN THIEF IN SACRAMENTO. Bee, Feb. 29: For some time past persons residing in the vicinity of 14th and D streets have been missing chickens from their hen-houses, and there have been almost nightly raids on the fowls. Yesterday morning, about three o'clock, Ross Sprague heard a racket among his chickens, and, seizing a shotgun, sallied forth to bag, as he presumed, a Chinaman. When near the hen house, an animal sprang out and started to run away, but Sprague fired, and with excellent aim, as he killed instantly—a large fox. The animal was a fine specimen of the Reynard family, and his appearance gave ample evidence of the high living he has been enjoying. Where the fox came from is a mystery.

San Bernardino.

FINE DITCH.—San Bernardino Index, March 3: The Highland Ditch Co.'s ditch, built by the Mountain Nursery Co., has just been completed, water being turned into it on Saturday. The main ditch, which skirts the foot of the mountain and will supply the thousands of acres abutting the hills, is one of the finest constructed in the State. It has its source about five miles above the terminal point, obtains its supply from the never-failing Santa Ana river and Bear valley reservoir, is cemented the entire distance, has nearly a mile of tunnels and a capacity of 1500 inches, which will meet the stipulations in the contract of giving an inch of water to six acres—an abundance in the driest season. This main canal being high above the tract, no sluggish stream will course the ditches. About 200 laborers are at work digging ditches and cementing them, and already two miles have been completed on the eastern and southern boundaries, and innumerable laterals are in progress. The company has expended \$200,000 in securing water alone, and will have an abundance for all purposes.

San Joaquin.

NURSERYMEN BUSY.—Lodi Sentinel: The Stoddard tract, about 100 acres, under the charge of the well-known nurseryman, Jas. A. Anderson, has all been planted to fruit trees. Mr. Stoddard will have a fine lot of peach trees for sale next season, having planted over 100,000 pits this year. The Childs property, purchased by the well-known firm of Strong & Co. of Sacramento, is fast undergoing a change, and will soon be one vast orchard and nursery. Middlekauff & Co. are busily engaged in transforming their recently acquired property into a nursery. They are old hands at the business, having furnished thousands of trees for Lodi and vicinity.

San Diego.

HORTICULTURAL SOCIETY STARTED.—Wildomar Cor. Union, Feb. 25: Last night a meeting was held in the Hotel Wildomar parlors to organize a horticultural society. The attendance was very good and a great deal of interest manifested. Hon. J. C. Chambers was chosen chairman, and R. A. Wilmes, secretary. The society will meet each Friday night at the hotel. It was agreed to have two subjects for next week's discussions: "What Fruits Shall We Cultivate?" to be led by Ezra Embree, and "What Flowers and Ornamental Shrubbery Shall We Cultivate?" to be led by Wm. Col-

lier. These gentlemen have had some years of experience in the line of their subjects, and will be able to handle them very intelligently.

BRISKLY AT WORK.—A great deal of the country about Wildomar has been plowed up, and is now verdant with new barley, oats, wheat and alfalfa. Hundreds of acres have been turned, and yet plows are going and seed is being sown. At present people are mostly engaged in planting fruit trees, of which a great many have been put out—peach, apricot, pear, orange, olive, plum and prune. A large number of grapes will be put in the valley this spring. The water supply is fine, being piped to nearly every house in the town and additions. It is very clear, pure and cool. Only one canyon as yet has been entered, but the supply is abundant.

Santa Barbara.

LOMPOC LINES.—Record, Feb. 25: There has seldom been a finer winter for stock in California. The grass has been superior from about Jan. 1st and now there is a most luxuriant growth from valley to mountain-top. The spring wild-flowers are somewhat earlier than usual, owing to the early fall rains. There are now at the wharf 2400 sacks of potatoes for shipment south, and Capt. Averill states that large quantities of mustard, beans and barley are daily delivered for shipment north.

GRAIN.—The largest deal in this section in grain for the year past was made Tuesday, when W. S. McKay, Dutard's agent, bought of Ben Burton over 400 tons at the landing, consisting of wheat, barley and English mustard. This was principally rental received by Mr. Burton from the Jesus Maria rancho. Mr. Burton has methodically entered upon the work of clearing the brush from the extensive mesas of the Jesus Maria rancho, and this year a thousand or more acres will be added to the available lands for grain.

Santa Clara.

STALLION SHOW.—San Jose Times: At a recent meeting of the Santa Clara Valley Agricultural Society, it was decided to hold a stallion show at Agricultural park on Saturday afternoon, March 17th.

Sonoma.

INVASION BY ENGLISH SPARROWS.—Petaluma, Feb. 29: English sparrows are determined to take this city. Five years ago linnets were plenty, but the sparrows have driven them away, and in every tree and about the cornices of the stores on Main street their nest-building is carried on and their ceaseless twitter is heard. They have so far defied every effort to dislodge them.

Trinity.

THE SHEEP TAX.—Trinity Journal: The ordinance levying a tax of five cents a head on sheep pastured, etc., in the county was passed at the regular meeting of the Board of Supervisors, Nov. 8, 1887; its object was to make non-resident sheep-owners pay for the privilege of driving in their flocks from the valley and making Trinity county a summer pasture. For a number of years back large bands of sheep from the Sacramento valley have overrun the summer ranges in the northern and central part of the county, doing considerable damage to roads and other property, and consuming feed to the detriment of tax-paying stock-raisers. The owners of these bands pay no taxes in the county and the sheep are not driven in until after the first of March; the sole object of the ordinance was to make these roving bands of sheep pay for the feed consumed and the damage done by them.

Tulare.

POULTRY THAT PAYS.—That the raising of chickens is not profitable is often disproved by ranchers who keep a few hens. A gentleman living near this city has 200 hens of mixed breeds—Plymouth Rocks, Leghorns, and Black Spanish—that furnish "pin-money" for his better-half. Last week the product of his poultry-yard amounted to 90 dozen eggs, which he disposed of at 20 cents per dozen, making a total of \$18. The cost of feeding his chickens amounted to about \$3, leaving \$15 profit on one week's product.

A STALLION PARADE, says the Times, will occur in Visalia on Saturday, March 10th. Owners of horses are requested to join in the exhibit without regard to age or pedigree of stock. Mussel Slough stockmen have promised to be present with the best horses owned in that section, and it seems probable now that at least 100 stallions will be exhibited, coming from all parts of the county.

POTATOES.—Richard Drais shipped 500 sacks of potatoes to Phoenix, Arizona, this week. Richard Hyde has also shipped potatoes to Arizona recently, and about 2000 sacks to Los Angeles. These are the first shipments ever made from here to Arizona. On Friday last, Feb. 24th, C. O. McDermend of the Briggs ranch, four miles southeast of this city, was engaged in digging his potato crop, consisting of about 75 sacks. They were large marketable potatoes, suitable for the table of any lover of that edible, and not in the least injured by frost or freezing weather. What do our Eastern friends think of a country where potatoes, cabbage, radishes, lettuce, cauliflowers, etc., are gathered fresh from the garden every day in the year?

Tuolumne.

PEACH BLOSSOMS.—Union Democrat, March 3: In the yard of Mr. G. C. Baker, in Sonora, there are several peach trees in full blossom at the present writing. They certainly anticipate

the early market and propose giving Tuolumne a boom in the bloom.

Ventura.

ASPARAGUS.—N. B. Smith called at the *Free Press* office on the morning of February 22d and exhibited a fine display of asparagus cut from his garden. The plant was fully six inches in length and challenged the admiration of an epicure.

ARIZONA.

A MOUNTAIN RANCHER.—Florence *Enterprise*, Feb. 25: E. M. Reavis came down Monday from his ranch beyond the Superstition mountains, bringing a lot of fresh vegetables, including some of the biggest and best cabbages. Heads that averaged more than ten pounds in weight were solid and firm, and as tender as young lettuce. He raises parsnips, five inches in diameter, that are extremely tender, and all his vegetables are of superior quality. He has 200 acres of land on his farm, 35 acres of which is under cultivation, and supplies vegetables and fruits to Pinal, Silver King and Florence. A never-failing stream of pure water is used to irrigate his land. The elevation is 5000 feet above the sea level, where all kinds of deciduous fruits flourish. Wild walnuts and cherries grow abundantly and some cherry trees have attained enormous size, being fully three feet in diameter. Blackberries and raspberries grow wild in plenty all around the mountains. Potatoes do well, the Early Rose, Goodrich and a few other varieties being the best, while some kinds will not grow at all. Mr. Reavis is a typical frontiersman—active, restless, hardy and hospitable. He is nearly six feet in height and strongly built, affable and intelligent, and the story of his life and adventures would make an interesting volume. He thinks the "Baron" Reavis is a distant relative, but regards him as a black sheep of the family and unworthy of his recognition. Mr. Reavis started homeward early Tuesday morning, following his patient burros and accompanied by his favorite dogs that follow him wherever he goes.

NEVADA.

FROM EASTERN RANGES.—Elko Cor. *Reno Gazette*, Feb. 22: February thus far has been most agreeable. Grass is peeping out upon all the sunny hillsides and the temperature at night scarcely falls below 40° above zero. I learn from Bradley & Russell that their bunch of cattle in Cassia county, Idaho, have gone through the winter thus far in fair condition with but little loss. They have evidenced a great deal of good judgment and caution by distributing their cattle in various localities remote from each other, so that if a zone of storm weather reach one locality it will nine cases out of ten miss the other ranges. I glean from Thomas Cain and Abner Wiseman of Clover valley that their large band of cattle is doing exceedingly well from the fact that they were fed during the entire winter. They do not apprehend a loss over the average; but, like nearly all the rest of the cattlemen of Eastern Nevada, complain of frozen limbs and feet. Daken & Bro. of Lamoille valley report their stock in good condition. They do not think they will lose over three or four per cent, for the reason that they had an abundance of hay, with good shelter for their stock. All classes of stockmen in Eastern Nevada have learned a lesson during the past year which will not soon be forgotten. This great and important interest narrowly escaped great loss and a heavy set-back. They have resolved as a body to raise and put up more hay, to preserve their fenced ranges for fall and early winter use, to erect more sheds from year to year for the protection of their stock, and continue in this new departure until the old mode of letting large and valuable bands of cattle take care of themselves will be only known as history of the past.

OREGON.

CARROTS.—*Rogue River Courier*: G. H. Briggs of Kirbyville from a half-acre of ground realized 9 tons of carrots last season, and from another quarter-acre 13 tons, an average of 52 tons per acre. This is a big yield and shows what a little care will do; the half-acre tract did not receive the same attention as did the quarter-acre. Other ranches over that way produce equally large crops.

BLUE GRASS.—In a talk with Lewis Strong, one of our sturdy, painstaking farmers, not long since, he said it was a custom with him to grow blue grass for hay. A number of acres were thus sown a few years ago, from which two crops per year are cut. After cutting it is highly necessary to water the ground, as the roots will not make a start because of dryness of the soil. Twice a year, then, this hay-feed is to be irrigated. After starting, the ground is so covered by the matting of the shoots, the moisture is perfectly retained. Mr. Strong has a little farm of a trifle over 330 acres, much of which shows care and system of work.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and on liberal terms. Address J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

Paine's Celery Compound

For The Nervous
The Debilitated
The Aged

CURES Nervous Prostration, Nervous Headache, Neuralgia, Nervous Weakness, Stomach and Liver Diseases, and all affections of the Kidneys.

AS A NERVE TONIC, It Strengthens and Quiets the Nerves.

AS AN ALTERNATIVE, It Purifies and Enriches the Blood.

AS A LAXATIVE, It acts mildly, but surely, on the Bowels.

AS A DIURETIC, It Regulates the Kidneys and Cures their Diseases.

FORESTRY.

Pine-Set Mountains.

[Written for the Rural Press by JOAQUIN MILLER.]

I wonder if any one of us ever stopped to ask where the lumber is to come from which is to be used in the thousand and one "cities" that have been laid out this past twelve months in California. It is well enough to look ahead a little. For they surely will be built; if not this year or this century, why then the next year or the next century. And the difference between a year and a hundred years is not of nearly so much account or moment to the State as to a man.

Where will the lumber come from? There is not wood enough on all this Western slope, wide as are the continuous woods

sea, once the "suburbs" and the very core and soul of the city so far as beauty and fertility were concerned, had been destroyed, drowned by the wood-cutters. That is, men were permitted to cut down the trees growing far up the Tiber. This let the sun in on the ground, baked it hard, burned up the roots, bushes, briars. Then the rain fell suddenly and direct on the hard, baked ground, and so rushed on to ruin of all things. Ostia, away down by the sea, was buried. It lies there twenty feet under ground to-day. And dozens of other pretty towns all up and down. The once pretty Pontine lakes became marshes—malaria! And that was the end of Rome. It was the axe of the Roman, not at all the sword of the Goth or Hun, that slew Rome. For "men may come and men may go," but the forest must grow forever.

We went far up the Peavia to the pretty

made their tenants plant and perpetuate the forest.

The millions and millions of posts or spiles on which Venice was built were grown here; planted no doubt by the hand of man, although of this one cannot speak positively. But we do know certainly that all the trees to be found here now—and there are many hundreds of miles of them—were planted and protected by the hand of man. This river debouches immediately into the lagoons about Venice. All the rainy season through you see rafts—great, long rafts of logs—fastened together by hazel-bush withes, tall and splendid fellows, nude to the waist, guiding them, plunging down this tumultuous and swift river on the way to Venice.

The forest trees grown here are mostly pine—pine of many kinds; also some cedar, as well as fir and cypress. A great many wild berries, or rather wild berries that have

they still insist on saying that if poor Titian had not got his head turned by good fortune and gone to Venice, he might have lived to a good old age!

It is much to know that you can see the very peaks here, these very same pine-planted peaks that he put in his landscapes in his wonderful pictures of the Holy Family. Indeed, it is told of Titian that he put in his landscapes of scenes in Palestine certain sorts of trees not to be found in the Holy Land, so true was he to nature; so resolved to paint things exactly as he saw them there on his native hills and snowy heights.

But what I set out to say was this: We must plant our steeps in pines also. What Italy did away back in the Dark Ages, we can also do here in the light of this day and land.

We are going to build the cities we have

A WARM CORNER IN THE CONSERVATORY, GOLDEN GATE PARK, S. F. (See page 217.)

where rolls the Oregon, to build up one-half of these baby towns that were born and baptized with pretty names this year just past.

Let us look into this thing. More than a dozen years ago I was with Garibaldi at Rome reading up the history of Italian Forestry. For the old hero had a vast plan of planting the empty and barren campagna with eucalyptus trees; and backed by his energy in this direction, the Italian Government even dispatched a ship to Australia for this tree. When I state briefly that I have been three times summoned to appear before the Ministry to give what information I could about trees in California, you will begin to understand something of the interest taken in Italy in the matter of tree-planting; bearing in mind all the time that Italy is a land almost entirely like our own; subject to droughts, subject to sudden fires, and indeed all disasters of flood and flame that beset us here.

Well, we found, by reading and riding about and observing closely, that all that part of Italy lying between Rome and the

little mountain town of Peavia di Cadora, where Titian was born, to look after forestry there. This is not very far from the border of Austria. Here is a colder clime and a stronger race, mentally and otherwise. The people are a blue-eyed people and have soft, yellow hair, such as you see in Titian's wondrous pictures. And here is an entirely new order of things. We found perpetual snow here on the mountain-tops, and trees stood in line like soldiers even up to the very edge of the snow. All these had been planted by the hand of man. Further back than memory or tradition ran we found that all this mountain region that bends its snowy white summits around and above Venice had been planted and kept in forest trees continually.

Of course there had been no patriotism in this at all, or any other than absolute selfishness at the bottom of all this brave work. The mountains from time immemorial have belonged to Austrian noblemen. You can still see one of their stupendous castles here in the pass of Peavia di Cadora. These noblemen found that forestry paid; paid better than anything else, and so they

been made tame by centuries of cultivation, grown here in these regimental woods that hang in long and regular lines against the steep hills, and these berries are picked by women and children and taken to Venice in boats.

At haying-time you will see many men on the steep and craggy places, holding stoutly on to ropes, with their feet braced solidly against some stone or tree. Away down at the other end is a wife, and maybe a child also. The wife has a short scythe in her strong hands. Her fine arms are bare, and a rope is fastened firmly about her shapely waist. The child also is securely tied, and is clutching at the grass as fast as the mother mows it off, to hold it from sliding down the almost perpendicular steeps and being lost in the roaring white waters below. A happy, healthy, strangely healthy, people. Titian was induced to leave here and go down to live in Venice. He died there of the plague when nearly one hundred years old. And it is told of these healthy and hardy mountaineers, who plant pines and suck in the odors of them, that

conceived here on this shore. But we have yet to plant and grow the pine trees that are to go toward the building of the larger number of them. And if Austria found it profitable to grow pines and raft them away down from the snow to the Adriatic sea, what is the reason we may not plant our hills with pines at a profit also?

The fact is, we are living "from hand to mouth," like savages. It is told of our Shoshone Indians, when asked by the Government to plant gardens, that they refused to do so, alleging as an excuse that as they were constantly at war they would probably not live to eat the fruit of their labor.

I write it down as a fact that I have many times heard men decline to plant forest trees here in California for the very same selfish reason: they would not live to sell the lumber.

"After us the deluge," cried the French. And sure enough the ruin, of that selfish generation at least, was not far off.

"THE RURAL is a welcome weekly visitor in our family. We have taken it for 12 years and don't think we can do without it." So writes M. O. K. of Anaheim.

ACME PULVERIZING HARROW, CLOD CRUSHER & LEVELER.

DON'T BE DECEIVED BY WORTHLESS IMITATIONS.

All genuine bear Trade-Mark, have Steel Clod Crushers, Double FLEXIBLE Gang Bars, and the Improved Style also has

ADJUSTABLE REVERSIBLE COULTERS,

Which when worn may be turned end for end, thus giving double the amount of wear. Works the entire surface of the ground. No other Harrow combines these points.

"ECONOMY" PORTABLE BOILERS.MOUNTED ON SKIDS.
2 1/2 to 20 H. P.**BYRON JACKSON,**

625 Sixth St., San Francisco, Cal.

For quantities of water not less than 100 gallons per minute, and for lifts not exceeding 100 feet, there is no better pump than that illustrated in the annexed engraving. It is very simple, durable, and economical. I make them in sizes from 2-inch, 100 gallons per minute, to 24-inch, with a capacity of 14,000 gallons per minute, and am prepared to build larger sizes to order. They must be set within 20 feet of the water; will draw it that far and force it up 90 feet. They are very satisfactory in wells not over 100 feet deep.

**COMPLETE Power and Pumping PLANTS A SPECIALTY.**

ADDRESS:

BYRON JACKSON, 25 SIXTH ST. San Francisco.

THE SAN JOSE Orchard & Vineyard Cultivator.

The most complete and the easiest handled machine in existence. Made entirely of Iron and Steel, with the exception of the poles. Weight, 335 pounds. This is the only machine that can be handled on the sidehill. By means of the shifting pole and the adjustable teeth the machine works to perfection. These can be used to advantage on level ground also and the machine made to work fully a foot and one half nearer the trees.

All our machines are 7-tooth, 4-foot cut, but can be increased to 9-tooth, 5 foot cut by the addition of two extra arms, secured in a grooved casting, in the ends of the frame, by means of a set screw. This is an improvement not to be found in any other Cultivator, and Farmers having both Orchard and Vineyard will readily see its value, for when cultivating in the Vineyard the 7-tooth is as large as can be used, and when cultivating in the Orchard, by the addition of the two extra arms, the machine is increased to 9-tooth and an extra foot of work accomplished with the same amount of team and without undue strain or exertion.

On the 7-tooth machine the outside teeth extend 8 inches outside the wheels, and on the 9-tooth 16 inches. These Cultivators are perfectly balanced by means of a lifting seat.

All our Cultivators have the PATENT STEEL SHOVEL BACK. This is one of the greatest improvements on cultivating tools ever introduced. The Shovel Back Sleeve is fastened to the Standard by a bolt in the lower hole, while in the upper hole we use a hard wood pin, which in case the Shovels catch a root or strike an obstruction, it breaks off and lets the Shovel fly back, so as to pass over. Nothing is broken but the wooden pin, which can be replaced in a minute's time.

We have Agents for these machines in nearly every town in the Fruit-growing districts of the State. Every machine guaranteed to give satisfaction. Write to us for circulars and we will refer you to our nearest Agent.

Friendship With a Bird.

I have had one little brief friendship with a bird during the present summer, which seems like a tender dream, a fleeting glimpse into an unknown world, a peep into fairy-land, to me.

On one summer morning, which had succeeded one of those coolish nights which come a little sharply after a season of intense heat, I stepped out into an old-fashioned garden which lies just beyond my apple tree. A group of crimson petunias was held up by a little dry shrub, to keep them from trailing their silk dresses on the ground below, and there, perched on one of its bare twigs, a little bunch of greeny-gold feathers, sat a young humming-bird. I softly came nearer and nearer, expecting every moment that he would fly away; but the little thing seemed chilled or sleepy, and I at last took him in my hand. He did not seem to flutter, but gasped a little, and I thought him dying. I kept him in my warm hand, and sending for a lump of loaf sugar and a tiny glass of water, I took him indoors. I patiently held him in one hand, warming him, while with the little finger of my right hand I held a drop of the sweetened water to his bill for some minutes, and was finally rewarded by the little bill opening and the wiry little tongue sipping the sweet from my finger, running about under the nail of it, as if it were a flower. He soon grew lively, flew around the room, and perched on some flowers on my dresser. Then he took longer flight, and grew so tame that when he was hungry he would fly down to me from the top of a picture or mirror frame, and alight on a little twig which I would hold out, where he would sit and sip his sugar and water from a teaspoon or the end of my finger. Three drops satisfied his desire for the time, and away he would fly again, always alighting with a little chirp, or rather squeak, for it sounded precisely like a little mouse. Once I varied his food with diluted honey, but he seemed to prefer the sugar. I gave him the range of two rooms, and having no cage, I fastened a spray of fuchsias by my window, where he slept at night, with the tiny head under the wing, never moving until the dawn came, when he became uneasy until he had his sip of sugar and water.

What completely won my heart was the fearless confidence of the little thing. One day, I remember, he had alighted on the edge of the dish of honey, and losing his balance, he smeared his breast with the thick honey. I cleaned it as well as I could, but some of it dried and stuck the small feathers together. The next day I tried again to moisten and clean them out with some soft article and tepid water. He was sitting on a twig held in my left hand, and as I rubbed a little hard, he scolded and moved a trifle along on the twig, as much as to say, "Work away, but please be more gentle."

Another thing he delighted in was to be held on his twig over a large spoonful of soft water, and dip in his beak and splash water over his little body.

I did not have him long; indeed, how could I rob him of the outdoor, happy August days, which were passing so rapidly out of his brief life? So, I said to myself every morning, while I surrounded his window with fresh flowers, and still kept the glass closed between him and freedom; but the little thing awakened an almost human love in the heart with his own trusting confidence and his rare gem-like beauty.

Finally, on one evening, when he seemed settled on his twig for the night, I opened an outside door to the room for a brief moment, and just as I was closing it again, there came a little whirr over my head, a dash of golden green, and he was gone.

That night it blew and rained. I could not sleep, for it seemed to me there was a tender baby out in the chilly rain. But I have seen many humming-birds since then, still flying about the petunias and late summer roses, so we will trust that my little pet was soon sheltered and companioned among his own relations, and ready to start with them on the long aerial journey southward. But to me he was like a visitant from fairy land.—*Vick's Magazine for February.*

"Stop My Paper!"

We don't know where this funny piece originated, but we lately came across it in the *Modesto News*. A country editor was made to writhe in keenest humiliation of spirit on receipt of the following scathing criticism on the conduct of his paper by a subscriber:

DEAR SIR: I hereby offer my resignation as a subscriber to your paper, it being a pamphlet of such small consequence as not to benefit my family by takin' it. What you need in your shete is branes and some one to rassel up news an' rite eddytorials on live topics. No mention has been made in your shete of my butcherin' a poland china pig weighin' 369 pounds, or of the gaps in the chickens out this way. You stenjully ignore the fact that the tater bugs an' eatin' things up out here, and say nothin' bout Hi Simpson's durham bull calf breakin' its legs fallin' down a well, or of grandma sippin' havin' the sore leges. Two important weddin's here has been utterly ignored by your columns, an' a two-kolum obituary writ by me on the death of grandpa Henry, was left out of your shete, to say nothin' of a alphabetical poem beginnin' with "A is for Andy and also for Ark," writ by my darter. This is why your shete is unpoplar here. If you don't want eddytorials from this place and ain't goin' to put in no news in your shete we don't want said shete. Yours in disgust,

HIRAM DOAKS.

P. S.—If you print that obituary in your next isoo I may sign again for your shete.

- 378,819.—STOCKING—Frank Wilcomb, S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

TIMBER FRAUDS IN CALIFORNIA are drawing notice at the East. The *N. Y. Herald* had a long article a few days ago about the 20,000-acre "grab" in Mendocino county. It avers that in the two counties of Mendocino and Humboldt, which are at present chiefly given over to the timber and lumber business, nineteen-twentieths of the pre-emption and commuted homestead entries in the timber belt are fraudulent and were made solely for the purpose of clearing off the timber, and finally calls on Congress to take action in the premises.

A FINE FRUIT EVAPORATOR.—L. W. Parsons of San Jose has patented a fruit evaporator, which, he claims, is constructed on really scientific principles. His premises and reasonings appear sound, and the testimonials he shows from many people here in California, who have bought and used the machine, are thoroughly satisfactory. His advertisement may be found in this paper, and he has issued an illustrated pamphlet describing the apparatus.

In the Conservatory.

Not long ago we gave an interior view in the conservatory at Golden Gate park, S. F., and some general facts about the building and its contents. On page 214 is another view, showing a warm corner in which is a wealth of vegetation from distant climes. All visitors to the city should plan to give a day to a leisurely examination of the park and its appointments.

THE ALCOFFS, FATHER AND DAUGHTER, have passed on. A. Bronson Alcott, the well-known teacher, philosopher, and conversationalist, died on the 4th inst., at the ripe age of 88, and his daughter, Louisa M., the famous writer, survived him only two days. In their lifetime they both brought light and cheer to many a human soul and "their works do follow them."

WHO are the Anarchists? What is their doctrine? Why would they overthrow society and government, and what do they wish to substitute?—are questions frequently asked by thoughtful citizens. An article by Z. L. White, in the March number of the *American Magazine*, will answer such inquiries.

A BOILER WITHOUT RIVETS.—A German manufacturer is now making a boiler in which no rivets are used. The joints are all welded, and the cost is said to be but slightly in excess of rivet work.

DR. J. D. B. STILLMAN died at his home in Lugonia, San Bernardino county, on Friday evening, March 2d. He was a native of Schenectady, N. Y., and educated at Union college. He came to California in '49, was for a time surgeon on one of the P. M. Co.'s steamers, and afterward practiced medicine in Sacramento and San Francisco. He retired from practice several years ago and made a home at Lugonia, where he owned considerable property. Dr. Stillman had traveled quite extensively, and was the author of many articles on scientific and general topics, and a book entitled "In Search of the Golden Fleece." He was genial, magnanimous and honorable, and had the love and respect of a wide circle of friends. He leaves a widow—his second wife—four sons and two daughters.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

A NEW FIRM.—Many readers will recognize old friends in the names of a new firm which opens business in the agricultural implement line in this city, as advertised in this week's *RURAL*. The firm is Burge & Donahoo, and their location is 26 Beale St. Mr. S. S. Burge made wide acquaintance while manager of the Grangers' Union at Stockton, and Mr. Donahoo has also been prominent in important enterprises. The firm have other goods besides those mentioned in their advertisement this week which they will set forth in their future announcements.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0.25
- 2.—World's Encyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50

Send for free circular describing most of these premiums, and any further information desired.

The Driven-Well Patent.

It may be recollected that on the 14th of November last the U. S. Supreme Court, in an opinion by Judge Blatchford, declared the "driven-well patent" invalid, and affirmed the decree of the lower court in favor of the alleged infringer, Hovey.

The scheming owners of the patent, however, were raking in too much money, in the shape of royalty from farmers, to submit to this just decision, until the last effort to overthrow it had been put forth, so they applied for a rehearing—with what result is told in the following dispatch, of a fortnight since:

A decision was rendered in the United States Supreme Court to-day upon the application for a rehearing in the case of Wm. D. Andrews and others against Geo. Hovey, which is widely known as "the driven-well case." This court held that the patent issued to Nelson W. Green in 1871 for improvement in the method of constructing artesian wells was invalid, because the invention covered by it was in public use more than two years before Green applied for the patents. The court, after an exhaustive review of the whole case, denies the application for a rehearing.

This probably settles the case for good, relieving the farmers in a large extent of country from what they have long regarded as a burdensome exaction, and giving them and all lovers of justice reason to rejoice.

"THE ERTEL VICTOR," a baling press, manufactured by Geo. Ertel & Co. of Quincy, Ill., forms the center of a handsome engraving, 18x30 inches, around which are tastefully grouped a portrait of the head of the firm, a view of their extensive works and cuts explanatory of devices used in their machines.

EXTRAORDINARY OFFER!

This Valuable Book for 50 Cents!

To every one who subscribes to this paper, it contains 50,000 Separate and Distinct References; 1200 Engravings illustrating various topics. Accurate and concise information on Art, Science, Philosophy and Religion, including learned essays by the compiler, Prof. H. L. Williams and several hundred other authors. The articles on Anatomy, Architecture, Agriculture, Astronomy and the Fine Arts, are full and explicit. Botany, Chemistry, Engineering, Geography, Geology and History are each treated ably and explicitly. The article on Engineering is still further amplified by a full description, illustrated with plates and diagrams of the Great Brooklyn Bridge; Mechanics with plates illustrating Mechanical Motions. Mineralogy, Medicine, Law, Languages and Governments, are so clearly treated, that every one who reads can understand. In addition to the full and complete Cyclopædia, arranged in alphabetical form, we have bound up in the volume, a Complete Library of Knowledge, including a Guide to Correct Speaking and Writing; Book-keeping, a complete guide to business; Chronological History; Mythology; AN INDEX TO THE HOLY BIBLE; a complete brief Biographical Dictionary; full and complete statistical history of the United States, corrected down to 1884. The Interest, Banking, Usury, Insolvent and Homestead Laws of the United States, are for the first time gathered together in one volume. A LIST OF COUNTERFEIT NOTES WITH RULES FOR DETECTION OF COUNTERFEITS. Separate Dictionaries of Musical, Nautical, and Geographical terms; a carefully prepared treatise on Pronunciation, giving rules and examples whereby every one can become his own teacher. AN APPENDIX OF THE ENGLISH DICTIONARY, giving hundreds of words not contained in the ordinary dictionaries. FLAGS OF ALL NATIONS beautifully illustrated by colored plates. In fact the book is a library in itself. It has 800 pages, and is more profusely illustrated than any other Encyclopedia at the price, and contains a mine of information on almost every subject known to man. Every one of the many departments is worth more than the cost of the book. As "knowledge is power," this Cyclopædia will be a source of wealth to thousands in all ages and conditions in life. This handsome octavo volume is printed on good paper, and handsomely bound in cloth embellished with gold. Without guaranteeing all that is said above by the Eastern publishers of the work, the proprietors of this paper consider the book a valuable one, and in the absence of a more costly publication) very desirable in most households, and worth several times the cost mentioned above. In fact, we will refund the cost, with postage added, if any subscriber chooses to return the Cyclopædia to us within thirty days after receiving it. Address the publishers of this paper. While this notice appears, the WORLD'S CYCLOPEDIA will be sent to any subscriber (old or new) who orders it, and pays his subscription 1 year in advance and 50c additional.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.
DR. J. KOBBE—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

DR. J. KOBBE, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

H. M. NEWHALL & CO., Agents, 309

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Patented Jan. 23d, 1883.

For Sale by all Wholesale and Retail Dealers.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equaled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 7, 1888.

Rains the past week were opportune, and being general will do much in giving a large outturn of all kinds of crops. Trading has been fair notwithstanding the rains. Many lines of produce were taken for shipment to the East, so as to take advantage of the present freights. Eastern and European wheat markets ruled firm throughout the week. To-day's cable is as follows:

LIVERPOOL, March 7.—Wheat—Quiet but steady. California spot lots, 6s 6d@6s 9d; off coast, 33s 9d; just shipped, 33s 6d; nearly due, 33s 9d; cargoes off coast and on passage, quiet but steady; French country markets, turn dearer; wheat on passage to Continent, 230,000 qrs.; wheat and flour on passage to U. K., 1,753,000 qrs.

Foreign Review.

LONDON, March 5.—The *Mark Lane Express* says: Provincial markets record a slight advance in native wheats. In London the market does not improve. Flour is dull but values are maintained. Foreign wheat is lifeless. Large arrivals of flour from America act as dead weight on the home market. Corn is dull and oats 3d dearer.

California Products in Chicago.

CHICAGO, March 3.—Oranges remain firm. A very good demand exists. Florida oranges are getting scarce, the bright fruit already being pretty well gone. There are fair arrivals of California and they sell moderately, and Messina are in very good demand, with the supply of them good. Sales covered just about the former range of prices: California Riverside oranges, \$3.50; other kinds, \$2.75@3; Riverside Navel, \$5.50@6; other Navel, \$4.50@5. In California dried fruits moderate business was reported. Sales are mainly of small lots. Prices are generally steady, and the supply of the several descriptions fair but not heavy. We quote: Peaches, sun-dried, in sacks, 1 lb. 11@12c; do evaporated, unpeeled, in sacks, 1 lb. 13@15c; do, boxes, 1 lb. 14@16c; do, peeled, in sacks, 1 lb. 17@22c; do, in boxes, 1 lb. 22@25c; apricots, sun-dried, in sacks, 1 lb. 10@12c; do, evaporated, in sacks, 1 lb. 12@16c; plums, pitted, in sacks, 1 lb. 12 1/2@13 1/2c; prunes, small, 1 lb. 8@10c; do, fancy large, 1 lb. 13@14c; nectarines, according to quality, in sacks, 1 lb. 5@12 1/2c; raisins, loose Muscatis, 2-crown, 1 box, \$1.45@1.50; do, 3-crown, 1 box, \$1.60@1.80; do, London layers, 1 box, \$2.30@2.40.

Good to choice grades of hops are meeting with a fair demand. The feeling in the market is quite firm for such grades, owing to moderate supply. Trade has not been of sufficient magnitude, however, to cause any advance for low grades. The market remains dull, for there is an ample supply. Pacific Coast, choice, 1 lb. 12@14c; common to prime, 9@12c.

Beans are ruling firm. During the latter part of this week more business has been done and trade can be said to be picking up again. There are few straight lots of good domestic beans offered, the supply consisting mainly of imported goods. Quotations are: California, according to quality, \$2.25@2.85.

Oranges at New York.

NEW YORK, March 5.—The fact is announced to the trade through the *Commercial Bulletin* that Strong & Co. of Los Angeles will begin free shipments of oranges to the East at once, sending forward the first train to-morrow. The market reports to-day show that last month Florida sent 32,400 boxes of oranges to this city, the total to date for the season being 198,100 boxes.

Wool.

NEW YORK, March 5.—The dealing in wool is chiefly to manufacturers, with no great volume of sale. The tariff does not at the moment appear to affect trade. The following are the sales for the week: 3,000 lbs. Spring California C, 19c; 900 lbs. scoured, 45@55; 10,000 lbs. do, 45@52; 18,000 lbs. medium Oregon, 25; 20,000 lbs. Territory, 20; 25,000 lbs. Colorado scoured, 35@47; 20,000 lbs. fall Texas, 15 1/2; 15,000 lbs. do, 16; 20,000 lbs. quarter blood-washed combing, 36@60; No. 1 washed, 35; 3,000 lbs. coarse, 34; 3,000 lbs. No. 1 washed, 27; 20,000 lbs. XX and above, 33; 30,000 lbs. XX, 32; 25,000 super-pulled wool, 35 1/2; 15,000 lbs. combing, 36 1/2. About 22,479 bales of East India, 28,000 lbs. Bagdad and 500 bales of Cape were sold on private terms.

Philadelphia reports an active market for fine qualities, with sales of 921,000 lbs.

In Boston it was the duller week of the year, with sales of 4,400,000 lbs. of domestic.

There are 25,320 bales of Australian wool on the way to America.

Miscellaneous.

NEW YORK, March 6.—Some movement is making in California prunes.

Dried and canned fruit unchanged.

Lima beans are up to \$2.85. White are strong.

There is nothing new in business. State range from 8 to 14, Pacific 4@12. The bids for export are too low to lead to business. Some prime Washington Territory are quoted at 11. German is unchanged. Raisins are steady and firm.

Eastern Grain Markets.

CHICAGO, March 7.—Wheat easy and lower; cash, 75 1/2c; April, 75 1/2c; May, 80 1/2c. Corn, easier; cash, 48 1/2c; April, 48 1/2c; May, 52 1/2c. Oats, steady; May, 31 1/2c.

NEW YORK, March 7.—Wheat, 92 1/2@92 1/2c for cash, 90 1/2@90 1/2c for March, 91 1/2c for April, 91 1/2@91 1/2c for May, 91c for June and 90 1/2c for July.

Local Markets.

BAGS—Rains the past week cause a strong tone but at unchanged quotations. June-July delivery is quotable at 7 1/2@8c for Calcuttas.

BARLEY—Heavy shipments of the more choice to the East have created a scarcity of bright grades. Some localities oversold and will probably have to draw from this city. The market is strong. On Call there is a better feeling in futures with large

buyers taking all sold. To-day's sales are reported as follows:

Morning Session: Buyer season—600 tons, 83 1/2c. Afternoon Session: Buyer season—100 tons, 83 1/2c. Buyer 1888—100 tons, 92 1/2c; 100, 90 1/2c 1/2 ctl.

BUTTER—The market continues to sag under free receipts and only a fair demand. The lower prices, with still lower values expected, have stopped the importation of Eastern.

CHEESE—New mild is very firmly held at full figures, owing to light supplies.

EGGS—The market, under lighter receipts and no Eastern coming in, strengthened some, closing firm at quotations.

FLOUR—The market is steady, with a good trade call ruling.

WHEAT—The market is firm under a scarcity of the better grades. On Call, futures have ruled firm and higher throughout the week. The impression prevails that a still higher range will obtain next month. At to-day's Call the sales reported are as follows:

Morning Session: Buyer season—200 tons, \$1.38 1/2; 200, \$1.38 1/2. Afternoon Session: Buyer season—400 tons, \$1.38 1/2 1/2 ctl.

(COMMUNICATED.)

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Mar. 5, '88.	July 1 '87 to Mar. 3, '88.
Flour, qr. sks.	3,229,760	2,564,108
Wheat, cts.	10,322,212	6,527,518
Barley, cts.	1,911,223	1,833,268
Oats, cts.	114,606	140,929
Potatoes, sks.	681,060	800,197
Corn, sks.	73,391	166,191
Kye, sks.	19,658	15,693
Buckwheat, sks.	5,342	2,746
Beans, sks.	395,130	362,057
Bran, sks.	339,926	352,202
Hay, tons.	72,927	86,545
Salt, tons.	16,333	11,640
Wool, bls.	45,287	39,891
Hides, No.	75,321	71,778
Raisins, 20-lb boxes.	135,253	104,006
Quicksilver, flasks.	12,268	20,709
Hops, bls.	12,663	14,742

The receipts of certain articles of produce from Oregon, Washington Territory and other distant points, for the same period, compare as follows:

	July 1 '86 to Mar. 5, '88.	July 1 '87 to Mar. 3, '88.
Flour, sks.	166,757	186,727
Wheat, cts.	437,452	768,185
Barley, cts.	5,149	75
Oats, cts.	284,752	168,995
Corn, cts.	78,306	12,590
Wool, bales.	9,063	7,370
Bran, sks.	27,918	49,798
Hops, bales.	754	373
Hides, No.	22,985	23,600
Rye, cts.	2,765	2,765
Potatoes, sks.	67,830	39,901

Cereals.

The quantity of wheat on passage for Europe Feb. 23, 1888, was 14,040,000 bu., comprising 12,704,000 bu. to the United Kingdom and 1,336,000 bu. to the continent of Europe. The quantity of wheat on passage to Europe a year ago was 22,104,000 bu., comprising 17,360,000 bu. to the United Kingdom and 4,744,000 bu. to the continent of Europe, being a decrease this year as compared with last of 8,064,000 bu., comprising 4,656,000 bu. less to the United Kingdom and 3,408,000 bu. less to the continent of Europe, but was 1,264,000 bu. larger than a week ago. The quantity of maize on passage to Europe Feb. 23, 1888, was 3,600,000 bu., including 2,776,000 bu. to the United Kingdom and 824,000 bu. to the continent of Europe. The quantity on passage a year ago was 3,232,000 bu., including 2,648,000 bu. to the United Kingdom and 584,000 bu. to the continent of Europe. The quantity was in the week augmented 808,000 bu., and was 340,000 bu. larger than at the corresponding date in 1887, and was 128,000 bu. more to the United Kingdom and 240,000 bu. more to the continent than one year ago.

Oregon advises report that the bulk of the surplus wheat has been placed, and as the demand is good choice grades are more firmly held. Last month's export aggregate to foreign countries 792,302 bushels of wheat and 72,448 bbls flour. Reducing flour to wheat and the total export aggregates 1,163,542 bushels. Crop advices are favorable, for the weather has been good for growing crops. The reseeded of farms wherein the plant was killed by the unfavorable weather in January has been finished. Eastern Washington advices are favorable, for so far as can be ascertained the plant did not suffer in last January.

In this State rains the past week were of incalculable benefit to the growing wheat, and with the usual spring rains a large outturn to the acre can reasonably be expected. The plant is generally reported to be well stooled and rooted. The acreage seeded is not much larger than last year, but so far the outlook is more promising. Trading the past week was fairly active considering the light available supply of the better grades. Sales of strictly No. 1 white shipping were made at \$1.35, but good sold at \$1.33 1/2, while fair No. 1 sold at \$1.32 1/2. What is now called strictly No. 1 white shipping was called barely No. 1 white shipping the fore part of the season. It is claimed that the quantity of the better grades in the State will not meet the requirements up to June next, while all the better grades of shipping will be cleaned up before that time.

The barley market ruled firm throughout the past week for the better grades, and this too in the face of heavy rains well distributed throughout the State. A falling off in the stock in the warehouses last month, notwithstanding heavy receipts, caused buyers to feel more confident and also caused them to take hold more freely, but not at much higher figures. The overland shipments will probably cease after this week, but shipments of choice Chevalier by sea will continue for a short time longer. The crop prospects are good, but then there is a lessened

acreage, while the consumption is not only very large but increasing throughout the State. The bulk of the barley held here and in the country is off grade, that in this city of good to choice feed, is held against Call Board contracts.

Choice oats are scarce and wanted at full figures, but poor grades are in liberal supply and only placed with difficulty except at concessions on ruling quotations. The stock here is light while the receipts are moderate.

In rye and buckwheat there is nothing new to report.

Feedstuff.

Receipts of bran and middlings are only fair, and as there is, for the season, a good demand, prices keep well up. Ground barley continues to go out freely for the season. The market for all kinds of ground feed closed steady.

Hay is strong at full prices for choice wheat, first quality oats and the best wheat and oats. Other kinds are firm, but the three named are scarce and wanted. The supply of alfalfa is good. There has been an unusual free buying in a small way of alfalfa seed this winter, presumably for pasture and hay.

Live-Stock.

The market is shading off for bullocks and mutton sheep under freer offerings and only a fair consumption. Distant points have been feeding the market, but with improved pasturage the near-by points are beginning to offer more freely. The condition of the stock is good, but not up to the usual average in March. Spring lambs and calves are scarce and fetch good prices. Some large-sized three-quarter Southdown came in and fetched over \$10 a head—although only a few months old they average more in weight than do the general run in sheep, and being young sold at a high price. More attention is being paid to breeding sheep for the carcass, as it pays better than breeding for wool. In horses and milch cows there is nothing new to report—last week's report covering this week's market.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-feed, and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grain-fed, 6 1/2@6 3/4c per lb.; dressed 9@10c per lb.; soft, 5 1/2@6c per lb.; dressed, 7@10c per lb. Stock hogs, 3 1/2@5 1/2c per lb. BEEF—Stall-fed, 8c per lb.; grass-fed, extra, 7 1/2@ — per lb.; first quality, 7c@ — per lb.; second quality, 6 1/2@ — per lb.; third quality, 5@6c per lb.

VEAL—Choice, 12 1/2@15c per lb.; fair to good, 8@10c per lb.

MUTTON—Wethers, 9@10c per lb.; ewes, 9@9 1/2c per lb.; lamb-spring, 15@17 1/2c per lb.

Fruits.

Apples are slow, being out of season. Oranges meet with a good demand, particularly good keepers to fill northern orders. Since the completion of the railroad to Oregon, the trade with that section has more than doubled. Receipts so far this year are less than for the like time last year, as are the shipments overland. The market is firm at quotations.

There has been a good inquiry for dried fruits the past week, the call from the East being chiefly for peaches and apricots. For apples, the coast has taken quite freely in a small way. Stocks of all kinds are quite light, as are the stocks of canned fruits.

In raisins there is nothing new to report. The demand is good for the season, but the supply is light.

All private advices are confirmatory that the prospect for a large fruit crop this year was never better, although some varieties will be later than usual, owing the backward season. Berries are very backward, but the present weather is pushing the vines forward at a remarkable rate, and when they do begin to bear, it will probably be in large quantities. The only unfavorable outlook at present for horticulturists is the high overland freights. Dealers here think that horticulturists should make a more determined effort to fight for lower overland freights and also better transportation facilities. The switching off on the Government tariff it is thought is rather unfortunate for the high freight tariff, and poor shipping facilities is what keeps the industry down.

Vegetables.

The rains of the past week followed by warmer weather have given garden truck quite a vigorous start, and soon spring truck will be in abundance.

Asparagus is coming in more freely, but the high price restricts free sales, still the market cleans up well. The same remarks apply to green peas, new potatoes, rhubarb and green peppers. Very few tomatoes came in the past week.

Potatoes ruled fairly steady throughout the week, due mainly to the rainy weather lessening receipts. There is a good call for choice. It is claimed that considerable coming in have a dry rot.

The market the past week for onions ruled easy, except for good-sized, hard well-conditioned. Small-sized and also those that will not keep long were weak. Cut onions are slow.

In cabbages, the market is steady. Very few new are coming in, but free receipts are expected soon.

Miscellaneous.

Poultry ruled very high throughout the week under light receipts and a good demand.

Beans are very strong in sympathy with the East, where a still higher range of values is expected to rule before the close of next month, owing to scant supplies.

In honey there is nothing new to report. The trade call is only fair owing to light supplies.

Alfalfa seeds have been going off quite freely in a small way at from 8 1/2 to 9 cts. In other seeds the movements have only been fair.

Hops are more strongly held, owing to light supplies abroad, at the East and also on this coast; but then many brewers use substitutes to a very great extent.

In wools the market is reported quiet, due chiefly to the poor assortments and dealers waiting for the new clip.

Last year's wool clip of Great Britain aggregated 135,750,000 pounds and sold on an average at 19 cents per pound to the grower—that is, it netted him 19 cents per pound.

The United Kingdom crops for three years past are officially given as follows:

	1887.	1886.	1885.
	Bush.	Bush.	Bush.
Wheat	76,224,940	63,347,885	79,635,769
Barley	69,948,266	78,309,607	85,721,632
Oats	150,789,416	149,376,088	160,440,907
Beans	8,473,007	10,490,447	9,122,028
Peas	5,623,226	5,873,317	4,339,260
	Tons.	Tons.	Tons.
Potatoes	7,134,296	5,835,487	6,374,242
Furnishes	22,466,877	33,987,415	24,062,608
Mangolds	5,878,328	7,785,811	5,960,523

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way	365,585	206,816
In port, disengaged	68,372	122,059
In port, engaged	34,361	17,311

Totals 468,318 345,186

To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, March 7, 1888.

MACHINERY BY TRAINLOADS.—The first special through train of agricultural implements that has ever crossed the continent arrived here yesterday for the Bull & Grant Farm Implement Co., making the unusual quick time of nine days from Madison, Wis., by way of the Chicago, Milwaukee & St. Paul, and Union and Central Pacific railroads. This trainload, consisting of 20 cars, of Red, White and Blue mowers, and Bonanza and Star Sulky hay-rakes, is valued at \$48,000, and is said to be the largest single purchase and shipment ever made by any one importing house on the Pacific Coast. It is to be followed in about two weeks by another special through train of 20 cars of the Rushford tubular steel axle farm wagons. As the implement business is more directly connected with the agricultural industries of the State than any other, such a shipment made by one of our largest importing houses must show to a great extent the feeling of confidence placed by the trade here in a prosperous season and increasing business.—S. F. Examiner, March 2d.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

F. B. LORAN—Santa Clara Co.
JOHN G. H. LAMPADUS—Monterey and S. L. Obispo Co.'s
G. W. INGALLS—Arizona Territory.
WM. WILKINSON—Stanislaus and Merced Co.'s.
A. F. JEWETT—Tulare Co.
C. E. WILLIAMS—Yuba and Sutter Co.'s.
R. G. HUSTON—Montana Territory.
G. H. SCHAEFFLE—Calaveras Co.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, etc.,
—WITH—
Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classed illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by DEWEY & CO., publishers, 220 Market St., San Francisco.

A Rare Chance.

The Gabilan Rancho, situated in Monterey county, containing 7665 acres, is offered at \$3.50 an acre, for 30 days, on long time and easy terms. Address, J. C. HOAG, 312 Van Ness avenue, San Francisco.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

Carriages.

We are receiving 10 carloads of Carriages, Buggies and Wagons from the Briggs Carriage Company of Amesbury, Mass., which will be sold at prices that will be satisfactory, considering style and workmanship. Quality of material guaranteed the best.

F. A. BRIGGS & CO.,
220 & 222 Mission St., San Francisco, Cal.

\$500,000

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., Room 3.

STOCKHOLDERS' MEETING.
GRANGERS' BUSINESS ASSOCIATION.

The Annual Meeting of the Stockholders of the Grangers' Business Association (a corporation) for the election of a Board of Directors, and for the transaction of such other business as may properly come before it, will be held at No. 105 Davis street, San Francisco, California, at 10 o'clock A. M., Wednesday, April 11, 1888.
I. C. STEELE, President.
CHARLES WOOD, Secretary.

PETITE PRUNE D'AGEN
(FRENCH PRUNE).

One year old, stocky, well rooted trees, grown without irrigation, \$25 per 100.
HUNGARIAN and GERMAN PRUNE, \$18 per 100.
BARTLETT PEAR, one year old, \$10 per 100; two year old, \$15 per 100—Nursery prices. One-year-old Apple, \$10. All orders for the country carefully packed to secure them against weather, etc.
A. D. T. CORLEY, Nurseryman, East Oakland, Cal.

Refer to Nos. in latest issue when ordering.

For \$1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and \$1.00 worth of the above seeds. For \$1.75 the RURAL six months and \$1.00 worth of seeds. For \$3.25 the RURAL 13 1/2 months, and \$1 worth of seeds. (When preferred, a due bill for seeds to be furnished at any time within 12 months will be given.) The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the number only of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL.

100,000 Fruit Trees for Sale

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7 1/2 x 5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address.
DEWEY & CO.,
220 Market St., S. F.

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING and SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

OUR MANUAL OF EVERYTHING FOR THE GARDEN

is this season the grandest ever issued, containing three colored plates and superb illustrations of everything that is new, useful and rare in Seeds and Plants, together with plain directions of "How to grow them," by PETER HENDERSON. This Manual, which is a book of 140 pages, we mail to any address on receipt of 25 cents (in stamps.) To all so remitting 25 cents for the Manual we will, at the same time, send free by mail, in addition, their choice of any one of the following novelties, the price of either of which is 25 cents: One packet of the new Green and Gold Watermelon, or one packet of new Succession Cabbage, or one packet of new Zebra Zinnia, or one packet of Butterfly Pansy, or one packet of new Mammoth Verbena (see illustration), or one plant of the beautiful Moonflower, on the distinct understanding, however, that those ordering will state in what paper they saw this advertisement.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Raising a large proportion of my seed enables me to warrant its freshness and purity, as see my Vegetable and Flower Seed Catalogue for 1888, FREE for every son and daughter of Adam. It is liberally illustrated with engravings made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Cory Corn, and a score of other valuable vegetables, I invite the patronage of the public.

JAMES J. H. GREGORY, Marblehead, Mass.

ADRIANCE "BUCKEYE" MOWERS.

MAKE SURE THAT YOU BUY THE BEST MOWER MANUFACTURED.

One that will Outwear two of any other make of Machine.

One that is very Simply Constructed and the Lightest Draft.

One that will do Better Work than any other Mower made.

TRADE-MARK "BUCKEYE."

The Machines built under the Trade-Mark "BUCKEYE" by Adriance, Platt & Co., Poughkeepsie and New York, have secured and retained the preferences of a large majority of the farmers of the PACIFIC COAST DURING THE PAST 30 YEARS.

We have the exclusive right to the use of the Trade-Mark "BUCKEYE" as applied to Mowers and Reapers on the Pacific Coast, and caution farmers against any fraudulent attempts to steal our reputation.

BE SURE YOU GET THE

"GENUINE ADRIANCE BUCKEYE."

ADRIANCE, PLATT & CO.

REPAIRS.

CONVENIENCE AND CERTAINTY OF PROCURING FIXTURES FOR REPAIRS are very important points for a farmer to consider when selecting a machine.

We caution farmers against buying Mowers on account of the CHEAPNESS IN PRICE. The failures in the past few years of manufacturers who tried to put CHEAP machines on the market have caused trouble in getting extra parts for such machines as were sold, and have fully demonstrated the truth of the old axiom,

"The Best is the Cheapest."

And the "BEST" is

The "BUCKEYE."

The Adriance Buckeye Mower is made in two sizes:

Size B cuts a swath of 4 feet 3 inches.

Size A cuts a swath of 4 feet 6 inches.

The Adriance Reaper cuts a swath of 5 feet.

Each Mower is furnished with Two Complete Scythes, Two Extra Knife Sections, Two Extra Guard Fingers, etc.

Each Reaper is furnished with Two Complete Scythes (or sickles, if preferred), Two Extra Knife Sections and Two Extra Guard Fingers, etc.

Screw Wrench, Punch, Cold Chisel, Oil Can, Bolts, Rivets, etc., and Whiffletrees and Neck Yoke, furnished with EACH Mower or Reaper.

Send for Special "BUCKEYE" Descriptive Pamphlet with Reduced Prices for 1888.

A Flowing Well.

Artesian wells are proving such an important factor in agricultural production in some parts of the State, and promise so much more in the development of our arid regions, that it is appropriate that we should give prominent place to an engraving of a flowing well with the latest improved appliances for directing and regulating its flow. The engraving is made for the RURAL PRESS from a photograph of a well in Miramonte Colony, in Kern county, and though the engraving may have few artistic features, it has the superior advantage of truth to nature in its representation.

We have given so much attention to artesian wells, chronicling faithfully almost from week to week facts about their location, cost, strata traversed and flow attained, that our regular readers do not need a review of the subject. It will be interesting, however, for the casual reader or for those who have not given much attention to the subject to mention a few general facts. Probably the oldest large group of wells in the State are those of the lowlands of the Santa Clara valley, where small fruits and vegetables have been grown with artesian water for a generation. The lowlands of Los Angeles county follow in point of time, and yet it is a score of years since those in the neighborhood of Anaheim became famous. Within the last 10 years wells have been bored singly or in groups in large numbers in nearly all parts of the State, and though there have been instances of exceeding depth of penetration and high expenditure without much aqueous return, it is safe to say that as a rule California artesian wells are comparatively shallow, very cheap and exceedingly profitable, in many cases yielding their borers in actual value of water and enhanced value of real estate hundreds of times the expenditure required to secure them. We have not time to review the wells of the State; an interesting volume could be written on the subject. Perhaps the most famous artesian localities developed during the last decade are the San Bernardino valley, including the new Gage wells for the irrigation of an extension of Riverside, the Ontario and Pomona wells, and others in Los Angeles county, the vast artesian districts of the San Joaquin valley and the interesting mountain artesian district of Sierra county. Besides these there are gas wells, oil wells and water wells here and there which an auctioneer would describe as too numerous to mention.

As the well shown in the engraving is located in the rapidly developing region of the upper San Joaquin valley, it will be proper to speak especially at this time of that neighborhood. A few years ago we gave a map of the artesian

wells of Tulare county, and we have given enumerations since then, but the well-borers work so fast, and the land-owners like flowing water so well, that any enumeration rapidly becomes old. A writer in the *Chronicle* last week apparently, after considerable research, gives the number of wells in the San Joaquin valley at 350, with a flow of 100,000,000 gallons every 24 hours. Of these Tulare county claims, according to the *Valley Record*, 120 wells flowing upward of 25,000,000 gallons each 24 hours. Kern county, according to a recent enumeration by Mr. George A. Raymond, had 41 wells

choking the pipe and the jamming of the casing. It may safely be calculated that the cost of a completed well will be from \$500 to \$800.

As might be expected, the lower levels yield the cheapest and the best flowing wells. Mr. Raymond, whom we have just cited, says the artesian district of the San Joaquin valley may be defined by the line of 300 feet elevation. This line "curves in and out around the valley, and nearly incloses its greatest area." Many wells bored above this elevation have not been flowing wells, but have to be pumped. There are, of course, exceptions, and flowing wells

colony, one of whose wells we show, there is another enterprise, the Smyrna colony, which has a well with a daily flow of 2,000,000 gallons and many more in prospect. These wells and the enterprises based upon them bid fair to transform a vast arid region into thickly settled and prosperous farming communities.

Cheap Papers.

Once in a great while some reader writes us that he thinks the price of the RURAL too high because he can get cheaper papers. To such we

generally write that the experience of those who try the cheap papers is not favorable to them, and after the trial they inform us that they conclude that, judging cheapness to mean much value for the money, the RURAL is cheapest of all. The so-called cheap papers are found to be expensive either because (if their moral tone be good) the information they give does not meet California conditions, or else, besides this lack of practical and useful information, they are so full of reprehensible matter that they have to be hidden away from the children, and their influence is undesirable even upon older readers.

It is impossible to make the RURAL so that it will compete in price with the flash papers, or with some of the cheap Eastern agricultural papers which are about as worthless here as their price would indicate. It costs much money to make a first-class, clean, valuable paper

anywhere, and especially here, where expenses are high and the field of circulation limited. No successful farmer farms here as he did or would in Eastern soil and climate, and he knows that Eastern experience and progress is not what he wants to know. If we could make the RURAL as good and useful as it is, and still cheaper, we would do it. As it is, our most thoughtful readers tell us they cannot get the same information at any price elsewhere.

FARMING BY THE MOON.—The latest phase of moon farming is one of the most interesting we ever heard of. It is related that at a recent lawsuit in Texas 13 expert cattle branders swore that when cattle were branded in the "dark of the moon" the brand will never get larger than the first impression, no matter how much the animal may grow. But if the branding-iron is applied in the "light of the moon" the scar will spread, and the lighter the moon the larger will be the spread.

AGRICULTURAL EXPERIMENT STATIONS.—On another page of this issue may be found a University Bulletin, giving the report of Prof. Hilgard to the Board of Regents concerning the establishment of outlying culture stations.

PHOTOGRAPHIC VIEW OF FLOWING WELL IN THE MIRAMONTE COLONY IN KERN COUNTY.

with a daily flow of 48,000,000 gallons. This statement, with mention of each well, was published in the RURAL PRESS of January 7th last. Mr. Raymond has taken the utmost pains to verify his estimate of the flow of these wells in Kern county. The fact that fewer wells in Kern yield more than a larger number in Tulare is accounted for by the fact that the Kern wells are all of recent boring, and a much larger diameter is now secured than was sought for in the earlier Tulare borings. Ten-inch wells are now common, while two and four inch was the earlier size.

The upper San Joaquin is an ideal region for well-boring, as no rock tools are required. The bore encounters layers of sand and clay, sometimes well compacted, but still easily penetrated. The usual rates for well-boring in this region are given as follows: For the first 100 feet, \$50; for the second 100 feet, \$75; for the third 100 feet, \$100, and a proportionate increase for each 100 feet. The casing ordinarily costs from 35 to 50 cents per foot, and the owner of a well is expected to board three men while the work is being done, which takes from three to five weeks, according to the number of accidents that happen during the work, these accidents arising mainly from quicksand

have been secured at a higher point, but these are believed to have struck the flow from a natural reservoir higher than that which feeds most of the valley wells.

Our engraving shows a well in the Miramonte colony, and is typical of the best flowing wells. The arrangement for capping is that shown in detail, with sectional drawings in the RURAL PRESS of Sept. 3, 1887. It has an anchor underground which securely holds on the capping device, and thus by turning the valve, which the man is represented as doing in the picture, the flow may be stopped or regulated at any point from zero to a full flow. There is a law that all wells shall be capped when the water is not in use, and this should be done for two reasons—first, because it has been shown that artesian streams can be diminished by excessive draught upon them, and second, that water-soaked soil is not desirable either from a producing or sanitary point of view.

The effect of artesian wells is to rapidly develop the region in which they are obtained. Such is the fact in Tulare county, of which frequent mention is made in our columns. Kern county also is being enriched by a number of colony enterprises and the incoming of large numbers of colonists. Besides the Miramonte

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Pen Sketches of Mendocino County.

EDITORS PRESS:—Having been a resident of this county for nearly 30 years, I thought I might by your aid become, to a limited extent, a public benefactor, especially to the home-seeker. I propose to give to the readers of your valuable home-builder a general idea of the topography, soil, climate, health and resources of Mendocino county.

To begin with, the oldest settlement was made in Anderson valley by Walter Anderson in the year 1851. He came to California in 1846, being one of the typical pioneers of the mighty West. Mr. Anderson resided in Anderson with his family till 1862. Then, becoming old and feeble, he removed to Ukiah to live with his son-in-law—L. B. Lamar, cousin of our distinguished L. Q. C. Lamar, late Secretary of the Interior—where he died in 1866.

Anderson Valley

Is one of the picturesque and lovely valleys that nature seems to have favored. It is situated 30 miles northwest of Cloverdale, 20 miles west of Ukiah City—the county-seat of Mendocino—and 18 miles east of the Pacific ocean. The Navarro river, which heads about 16 miles north of Healdsburg and runs about 50 miles nearly parallel with the ocean and then empties into it, drains the watershed of Anderson township. This river and its tributaries drain about 180,000 acres of Mendocino's best lands, including about 60,000 acres of as fine redwood, tanbark, oak, laurel, madronya, fir, chestnut oak, white and black oak, etc., as is grown in California.

The valley is about 18 miles in length by, say, from $\frac{1}{2}$ to 2 miles wide, settled by as thrifty, hospitable people as can be found anywhere. It is bounded on the west by a high range of hills covered with a heavy growth of fine redwoods, tanbark oak, etc. On the east are open, grassy alluvial hills on which herds of fine-wooled sheep find abundant pasture summer and winter and produce the wools of California which always command the highest prices in the San Francisco market. This is the principal industry of this township. We also raise a great many hogs, which usually find plenty of acorns and are grown at a trifling cost. Wheat, oats, barley, rye, hops and corn and all kinds of garden vegetables are grown in abundance, and the land is well suited for apples, pears, peaches, plums and prunes. Our crops are grown without irrigation, our rainfall being never less than 20 and generally 30 inches and frequently more, which insures us against drouth and makes us independent of canal rates or riparian rights. Hardly a quarter-section but has from 1 to 6 springs of the best of water. Our flouring-mill is run by one of the mountain streams.

As to the adaptation of our locality for a fruit country, I refer the reader to Dr. S. F. Chapin, who was State Inspector of Fruit Pests. He visited our locality about three years ago. His address is Auburn, Cal. A great deal of the timber lands when cleared is the most productive and grows the finest of fruits. I have known of parties slashing down the timber and in the fall burn it out and sow down in the ashes without plowing or harrowing and raise fine crops of grain.

There is no healthier place on the face of the earth, in proof of which I submit the following: No case of diphtheria or smallpox or scarlet fever was ever known in this valley. Not more than three cases of typhoid fever; less than 12 children under 15 years have died, and but three young men and about the same of young women.

It seldom snows in the valley and never falls more than about three inches and usually melts away in a few hours. Being just out of the fog belt, and yet near enough to the moist Pacific air, gives us a climate free from excessive heat and cold. Our resources are yet undeveloped, but we expect to grow into one of the finest areas of olive, French prune, Bartlett pear and plum and peach producing portions of California.

Hitherto we have been too far from railroad or water transportation for any other products than stock and wool, so that our resources have been lying dormant and undeveloped, but with the S. F. & N. P. railroad building within 17 miles, and the prospect for the Santa Rosa & Benicia railroad extending into our valley where they can reach 150,000 cords of the finest of tan bark and two billion feet of the coming house-finishing lumber of the world, the future of this locality should attract home-seeker and money-maker as well.

In the valley are five school districts. Booneville, the principal village, has two general stores, hotel and livery stable, two blacksmith-shops, postoffice and express office, and contains good church and schoolhouse, and about 150 inhabitants. The U. S. mail and express departs each way every day except Sunday.

Valley land can be bought at from \$50 to \$100 per acre; hill land, from \$7 to \$20, owing to locality and productiveness. Considerable good land is still subject to location. It is mountainous and mostly covered with brush and timber, but a great deal of it, if the proper energy and judgment were exercised, would make comfortable homes. Game abounds and the streams afford fine sport for the fisherman, there being plenty of mountain trout. T. J. McGIMSEY.

Booneville.

Los Gatos Notes.

EDITORS PRESS:—It has been a long time since I last wrote you from this rich and flourishing locality. March came in according to the old legend "like a lion." The clouds came and the county is blessed with a copious, life-giving rain, and it falls upon the just and the unjust. The chronic croakers are well drenched; they have retired, closed their doors, and are now mourning in sackcloth and ashes, because their gloomy prophecies of a dry year have failed. If I meet one of them going to town for a few groceries, I hail him thus: "How are you to-day, Mr. Brown? How does this look for a dry spring?"

"Well," he says, "you know I told you that this rain would come, and we are in a pretty fix. It will ruin all the fruit blossoms, make the hay rust, turn the grain to chess, and we can't get on our orchards to work them till they are all covered up with weeds. I am going to leave such a disagreeable country and go to Egypt, where it never rains and everything grows without cultivation," and I mentally say, "Go! for the country is better off without you."

We have had a very fine rain, and this morning the adjacent mountains are white with snow. The air is pure, crisp and bracing, but not frosty. The orchards are in bloom, and have been since the middle of February. The air is redolent of perfume and the ear is filled with music from the happy feathered songsters. The prospects for all kinds of fruit except the Moorpark apricots have never been better, and all kinds of fruit raised in this locality have few rivals and no superiors. The canneries and driers of this county take the lead in both quality and quantity.

New-comers.

Our incoming population is of the very best from all other localities. They bring with them generous hearts, social habits and well-filled purses to add to our rapidly growing community, and they come to stay. The boom has reached us and land is changing hands every day at enhanced values. Los Gatos is building up very fast. I was told yesterday that contracts were let to build 100 houses in East Los Gatos. They have a lot of practical pushing men there that are bound to win. The syndicate has bought the Hildebrand tract of 40 acres in Los Gatos, opened streets, built houses, and have already sold a large portion of it. The Johnson tract is also open and is being rapidly settled up. On the west side the syndicate has the McCullah tract which will be thrown on the market as town lots and small homes. Then there is the Almond Grove addition. First on this list comes Mr. John Bean, formerly of Springfield, Ohio, where he has his bicycle, tricycle and novelty factory. He came here for his health, and I am happy to say has gained it since coming here. He has invented, patented and brought to perfection his automatic air-pressure spraying pump for fruit trees. It is a grand thing, and is the protector and friend of every fruit-grower. He is offering his place in town lots. Then come Mr. Wilder, Mr. Nicolson and Mr. Tait. All have good lots and offer good inducements to home-seekers.

Leaving Los Gatos and coming toward Saratoga, we again find the syndicate. They have bought several fine tracts of bearing orchard and vineyard land close to Saratoga that will make splendid small homes for families. From one to five acres here makes a fine home for a family. If they have any children the driers and canneries will give them all that they can do, and as they do piece work they have a good chance to make high wages. Then there is any amount of fruit to pick. Then come the grapes to gather, pruning to do and brush to gather up and burn. All this work girls and boys can easily do except the pruning, and we all prefer to have girls and boys instead of Chinamen. I will here say to all good, honest, industrious families, if you wish to raise your children under healthy moral influences away from the slums and hoodlums of the large towns and cities, come here and buy a small home such as you feel able to get, and settle down and give your girls and boys a chance.

The young people have a merry time when the evaporators are running. As they are paid by the box for their work, they hardly stop long enough to eat their meals. It is light, pleasant work in a large, open building, with the cool, pure air all around them, and the rich, golden fruit before them. Delicate young ladies from the large towns and cities soon become robust experts pitting and preparing the delicious California fruits.

Spring Work.

Pruning, burning brush and spraying are about all done in this locality, and the orchard and vineyard men are now very busy cultivating and plowing. We have no need of irrigation here. Thorough cultivation furnishes us with plenty of moisture for all kinds of crops.

Grain and hay crops are looking remarkably well and promise a heavy yield. Wood and coal have been very high this winter. I have burned the brush from my orchard and the peach and apricot pits from my evaporators for fuel. They are excellent. The pits, when kept dry, are fully equal to coal and a great deal cleaner to handle.

Fertilizers.

Several of my neighbors and myself are using the California bonemeal chemical fertilizer this year. I have a flat, four-time spading fork, and with this I spade up the ground thoroughly

around the tree, then I apply the bonemeal at the rate of one pound to each year the tree is old and work it in well with the fork. We use the "high-grade fertilizer," for hay and grain from 300 to 600 pounds to the acre; for vineyards from 300 to 1200 pounds per acre, according to the age of the vines. It is a new thing here, but my friends from the East say that it doubles the yield of everything back there, and I hope that it will here.

Mr. J. R. Whitney of San Francisco, whose place joins mine, is building a large summer-house on a very slightly elevation that gives him a grand view of this beautiful valley and adjacent mountains and Bay of San Francisco. Your canvasser, Mr. Logan, called here, and he is doing good work in this valley. I will close by extending a hearty invitation to call and see me at the Fair View Farm evaporating establishment and see our beautiful country.

A. N. VAN FLEET.

SHEEP AND WOOL.

The Sheepmen and the License.

We gave recently the decision of the Supreme Court affirming the legality of the sheep license imposed by the supervisors of some of the mountain counties of California. The Lassen Mail of last week gives the following statements by sheepmen concerning their ideas of the local effects of the measure:

A Mail representative has talked with a couple of the most extensively engaged wool-producers in Lassen county—Bob Elwood and J. H. Gilman. These gentlemen say that while the ordinance adopted at the last meeting of the Board of Supervisors was intended to protect in a measure the local sheep-owner, it will work a great hardship to him.

"Each sheep-owner of this county," said Mr. Gilman, "will be compelled to pay a total tax of 11 cents per sheep. We will pay in Lassen four cents tax, two cents license, while in Plumas we will have to pay a license of five cents. You understand that nearly every sheep-owner in this county ranges his sheep in the mountains of Plumas in the summer months. After paying herders, cost of shearing, boarding herders and shearers, and other expenses, we have an insignificant margin left as profit. The ordinance adopted in Plumas and Lassen counties is the same as that now in force in Mono county. The sheep-owners of Mono tested the ordinance before the Supreme Court, and that tribunal affirmed the legality of the measure. The judge, in deciding the question, stated that it was clearly the intention of the framers of the New Constitution to place in the hands of supervisors the power of adopting ordinances licensing business of every kind, and unless it could be clearly shown that an ordinance was prohibitory in its effects and not regulating, it would have to stand; so you see it is useless for us to carry this matter again to the attention of the appellate court, unless we can show beyond doubt that the ordinance is prohibitory in its working. I for one stand ready to contribute to a fund to test the matter, but in view of the late decision I cannot see any benefit to be derived. We could, of course, carry the matter up to the Supreme Court of the United States, but that would entail a cost of thousands of dollars, and we might possibly have to pay the license after all.

"There's another point," continued Mr. Gilman, "that I desire to bring to the attention of the people, and that is the benefit sheep-owners are to the county. There are at the present time several men in the sheep business. I can call to mind Messrs. Perkins, Elwood, Forkner, Bull, Smith, Lawson, Wheeler, Rideout and myself. These gentlemen own from 14,000 to 15,000 head of sheep, and I venture the assertion that every sheep costs \$1 per year for its keep. That means \$15,000 in coin that is put in circulation by us each and every year. John Long, I am satisfied, has put \$40,000 into the pockets of the people of Lassen in the past 15 years. Take my last season's business as an indication of what benefit the sheepmen are: From my sheep I took at least \$5000. This money was all used in Lassen, and each individual received benefit, either directly or indirectly, from it. There are 10 or 12 men engaged in the sheep business; we will say that each man takes on an average \$3000 from his band, we have a grand total of \$30,000 that is put into the pockets of the people of this county. This amount is scarcely noticeable at the present, but drive the sheep interest from the county, then you will realize the loss."

"What do you think will be the result of the enforcement of the sheep-tax ordinance, Mr. Gilman?"

"I think it will result in killing out the sheep interest entirely. Owners will seek other climes and 'pastures new.'"

Bob Elwood was next sought, when the following conversation took place:

"Mr. Elwood, what will be the effect of the supervisors' tax ordinance upon the sheep business?"

"What will be the result?" answered the gentleman, energetically, "huh! it will result in breaking the back of one of the county's chief industries; that's what it will do, sir. It is a shame and an outrage, and the sheepmen will remember that supervisor from a northern district who wanted it known that he was in favor of the ordinance and that he voted for it. We will try and remember him. We can-

not pay the license and tax and live while we only receive 11 cents for our wool."

"Was the ordinance not intended to assist resident sheep-owners by taxing lower country bands that are driven up here every year to eat up the ranges?"

"It may have been, but my impression is that it will have an opposite effect. Those men who drive their flocks up here are not compelled to pay a four-cent tax in the valley counties where they live. As a general thing, they own the ranges upon which their sheep feed in this county. All the tax that Cone and others pay into our treasury on their sheep is two cents, while they 'slap it to us' to the tune of 11 cents; of course, this includes the five-cent license of Plumas county. Is this what you call protecting home industry? The valley sheep-owner has as good a thing as he wants. He is generally rich; he steps up to the captain's office, pays his little old two cents per head, then stands back and laughs at us squirming under the 11-cent load which the supervisors so kindly levy upon our flocks to 'protect the owners.' This is protection with a vengeance. Why is it that cattle-owners are not compelled to pay a license for the privilege of raising stock? Have they any more rights guaranteed to them by our organic law than we have? In my opinion, the tax-on-sheep ordinance was conceived in the minds of cattle-men to kill out the sheep interest. They want the world, but we will stay with them awhile, anyway. Cattle-men say that sheep and cattle will not range together. Let us see whether they will or not. I have a range in this valley to-day that I defy the most experienced cowboy to tell whether it is a cattle or sheep range by the manure that is upon it. It is a mistaken idea to say that sheep and cattle will not range together."

"In view of the strong public sentiment that is now existing in this county against the sheep interest, and from the further fact that the Supreme Court has sustained a similar ordinance to the one in force here, I suppose we will have to stand it; but I am firm in the conviction that it will result disastrously to the sheep-owners of Lassen. The law, instead of being regulating, will be prohibitory. It's a tough deal."

The interviews above are written from memory and are not in the exact language used, but the ideas of the interviewed are there.

THE DAIRY.

Cheese and Cheese-Making.

EDITORS PRESS:—My husband having been asked many questions in regard to cheese-making, in which business he has been engaged during more or less of the summer months for the last eight years, I have thought a few items on the subject might not be unwelcome in your columns, as there are, no doubt, many in other localities in the State, as well as in this mountain region, who would be glad to turn their dairies into something more lucrative than butter-making. Many not wishing to make cheese themselves take a lively interest in it owing to having some knowledge of the subject.

No doubt our methods are more simple than those in large factories, but the result to be obtained is the same—to put on the market a first-class article of cheese.

Milk is a complex and delicate compound composed of about 87 parts of water and 13 parts of solids. The solids are about $\frac{3}{4}$ parts of casein, $\frac{3}{4}$ parts of fat, 5 parts of sugar and the remainder mineral and albumen. The sugar in the milk mostly runs off in the whey, if it is drawn when sweet. It is the object of the cheese-maker to separate as much of the remaining solids as possible, and save them in the form of curds. The figures given may not be scientifically correct, but nearly enough so for general use. Good cheese it is said should be one-third casein, one-third fat and one-third water. To bring about this result is often difficult, as notwithstanding the most careful handling more or less cream occasionally shows itself in the whey. It is said on good authority that the best cheese-makers cannot always succeed as they desire. Everything may appear right on the surface, but there may be something in the milk or in the conditions and surroundings which may escape one's observation.

My husband was first taught to make cheese by a man who had carried on a Wisconsin cheese factory, and who thoroughly understood his business. But he has learned from experience that the dry climate of our high altitude makes some changes necessary. "Willard on Dairy Husbandry," written by the late X. A. Willard of New York State, and also the writings of Prof. L. B. Arnold, form good guides for any cheese-maker.

We began cheese-making with only such apparatus as we could conveniently secure, but we soon found to make a uniformly good article of cheese the best implements were necessary, and accordingly procured a self-heating vat (a Union Dairyman) and other tools.

There are several things about which my husband is very particular in his cheese-making: one is perfect cleanliness, not giving his tools warm-water scalds, but using water boiling, sizzling hot. Another thing is not guessing about time, temperature, quantity of salt, etc., but being guided by the clock, thermometer and scales. A third thing is, he does not prepare

his own rennets, as with all the care one can give them, there are many chances of leaving too much animal matter in rennets, which will breed taints. Certainly where men make a business of preparing them it can be done more satisfactorily than by the cheese-maker. "Chris Hansen's Rennet Extract" is acknowledged to be a superior article.

Many inquiries are made in regard to the profit of cheese-making, which may be answered by the result of our last three years' experience. In the summer of 1885, my husband sold 4254 pounds of cheese, the product of 117 days' work; in 1886 he sold 5129 pounds from 126 days' work, and in 1887, 6142 pounds from 168 days' work. This being the amount sold over and above much consumed in our family. The highest number of cows milked during this time was 26, though much of the time less. One summer we owned only 22 cows, and frequently some of them had been giving milk a number of months when the cheese-making began. The cheese has netted from 14 to 15 cents, butter during the time being sold for from 16 to 18 cents and often as low as 14, and it being hard to dispose of it at those figures. The milk which would make one pound of butter would make two pounds or a little more of cheese. It usually requires about nine pounds of milk to make one pound of green cheese. It may be there is more loss in curing in this dry climate than at a lower altitude. This mountain region gives us a fine market, surrounded as we are by mining towns. Much of our cheese has been marketed in Sierra City, Johnsville, La Port, St. Louis and other towns, some also in Reno and Quincy, while last year we received orders for 1000 pounds from Bodie. Most of the merchants in this vicinity have patronized us largely, some refusing on account of being able to purchase the cheese made in factories at a lower figure. Others have bought from us, paying more than they could have bought other cheese for, saying they could well afford to do so, as our cheese gave the best satisfaction to their customers. Cheese-making, of course, requires more work than butter-making, as when the mechanical process of the latter is completed the butter is ready for market. But with the former the chemical changes are continually going on until the cheese is cured and constant care is demanded, the cheese having to be rubbed, turned and greased daily, which, with the keeping of the shelves in a state of perfect cleanliness, and maintaining the proper temperature in the room, requires not only much labor but painstaking care.

Beckwith, Plumas Co.

THE VINEYARD.

The Grape-Growers' Convention.

The convention of grape-growers, held under the auspices of the Viticultural Commission, opened in this city on Wednesday, March 7th, Arpad Haraszthy presiding. The convention was full of interest and we make the following extracts from the proceedings, reserving other matters for future mention:

Mr. Haraszthy's Address.

At the afternoon session President Haraszthy made his opening address. After briefly narrating the circumstances which led to the holding of the Sixth Annual Viticultural Convention, he dwelt upon the good effects which all interested in vine-growing expected would arise from mutual intercourse and the exchange of ideas. He then compared the soil and climatic conditions of California with those of European wine-producing districts, and said that it would be best not to imitate the peculiar flavor or taste of any given European wine, but to produce wines of character essentially their own, possessing all those pleasing qualities that would make them desirable in point of strength, color, flavor, body, bouquet and general attractive fruitness of taste.

Development of the Grape Interest.

He then took up the subject of vine-growing in California from the time of the first vines planted by the old missionary fathers, previous to 1770. He said that little progress had been made in vine planting until 1858, when an interest was awakened throughout the State, until in 1862 a general enthusiasm arose, which lasted about three years. Grapes at that time were grown for table use only, and in 1870 the interest began to flag. In 1876 the prospects became so discouraging that vineyards were entirely uprooted and either trees or grain planted in their stead.

"In 1880," said Mr. Haraszthy, "a new impetus was given the planting of vines, from the fact that new markets had been formed for our wines, such as they were, in the Eastern States, and the people began getting used to the peculiar taste and character of the wines of California."

He then referred to the gradual introduction of foreign varieties of grapes which gradually supplanted the old inferior Mission grape, introduced by the padres. To the inferior wine obtained from the latter grape, he traced the bad reputation California wine formerly had in the East. He spoke of the appointment of the State Board of Viticultural Commissioners in 1881, and reviewed the actions of that body since its creation. At that time there was estimated to be 35,000 acres of vines planted in the

State, 20 per cent being foreign varieties and the remainder Mission.

At present, the speaker said, the Viticultural Commissioners believe that there are planted not less than 150,000 acres in vines, of which possibly 90 per cent are of foreign varieties.

After some general remarks on the subject of grape-growing and winemaking, Mr. Haraszthy went into statistics. Taking the vine acreage of California at present at 150,000 acres, he estimated by increase in value and after making all allowances for cost of improvements, etc., that within seven years the viticultural investments had increased \$50,000,000.

Increase in production was next taken up, the following being Mr. Haraszthy's estimates: Vintage of 1881, 12,000,000 gallons; vintage of 1882, 9,000,000 gallons; vintage of 1883, 8,000,000 gallons; vintage of 1884, 16,000,000 gallons; vintage of 1885, 11,000,000 gallons; vintage of 1886, 18,000,000 gallons; vintage of 1887, 17,000,000 gallons.

The speaker considered it difficult to make a close estimate of the wine consumed on this coast annually, but considered that about 2,000,000 gallons are consumed in this city and Oakland, about 3,000,000 gallons in the interior of the State, and that about 6,500,000 gallons were exported East, making a total demand of 11,500,000 gallons for the year. Taking the dry with the sweet wines the approximate value of the quantity named would be \$4,000,000. This would not include the brandy used on the coast or exported, which would swell the amount by about \$700,000.

Value of the Grape Product.

Taking as his basis that 150,000 acres of vines are at present planted, Mr. Haraszthy apportioned the area employed in growing raisins, table grapes and grapes for wine-making, and estimated that the value of the products within the next three years will be as follows:

1,500,000 boxes raisins at \$2.....	\$3,000,000
40,000 tons table grapes at \$30.....	1,200,000
50,000,000 gallons wine at 20 cents.....	10,000,000
1,500,000 gallons brandy at \$1.40.....	2,100,000

Total.....\$16,300,000

"The prices paid for wines during the past year," said the speaker, "ranged most discouragingly low. There seemed to be a regular stampede among the producers and a corresponding fever among the merchants that the prospective vintage of 1887 would turn out enormously large. This, however, not being the case, prices have taken an upward turn, and while wines of 1886 could have readily been bought at from 13 to 14 cents a gallon in August last, all that stock has long since been exhausted and the new wines of 1887 now command from 17 to 20 cents for the ordinary qualities, and notably higher for the finer grades."

"The following are the average prices paid a ton during the vintage of 1887 for the prominent varieties of wine grapes: Cabernet, \$25 to \$30; Petit Winot, \$25 to \$30; Black Burgundy, \$18 to \$20; Merinier, \$18 to \$20; Riesling, \$18 to \$20; Metaro, \$16 to \$18; Zinfandel, \$14 to \$16; Carbone, \$13 to \$15; Malvoisie, \$8 to \$9; Mission, \$7 to \$8."

Mr. Haraszthy then referred to the fact that the reputation of California wines was becoming established both at home and abroad, and this he traced to the laudable ambition which existed among growers to increase their knowledge of fermentation and other processes, as well as their desire to have the choicest varieties of wines.

Increase in Exports.

He presented the following table of exports by rail and sea, so as to show the increase during the period extending from 1882 to 1887 inclusive:

Years.	WINE EXPORTS.		
	Sea, Gallons.	Rail, Gallons.	Total, Gallons.
1882.....	1,305,177	1,451,515	2,816,692
1883.....	1,290,373	1,899,794	3,190,167
1884.....	1,210,455	2,313,644	3,524,099
1885.....	1,196,797	3,059,927	4,256,724
1886.....	763,999	4,428,224	5,192,223
1887.....			6,442,223

Showing an estimated increase in five years of 3,625,531 gallons.

Regarding national legislation for the protection of the purity of wines, Mr. Haraszthy said the State Board of Viticultural Commissioners had considered the matter and communicated the results of their deliberations to both Congressmen and Senators, and bills had been submitted, which, if passed, would cover the point effectually.

Following Mr. Haraszthy was an essay on raisin-making by T. C. White of Fresno and on table grapes by Dr. W. S. Manlove, which we desire to give in full, and therefore reserve for a following issue.

Grafting Vines.

Leonard Coates of Napa read a paper on the "Best and Cheapest Methods of Obtaining a Grafted Vineyard on Resistant Stocks." The writer made his points as brief as possible, dwelling only on those of most practical value to grape growers of California. He made three divisions: "Why we graft," "What we graft," and "How to graft."

First, "Why we graft." Grafting is an operation practiced for thousands of years, and is an art concerning which very little, if any, advancement has been made. If we believe Pliny, a tree was grafted in the garden of Lucullus which was made to bear apples, pears, almonds, plums, figs, grapes and olives. This must have been but an ingenious deception, for without a close relationship or structural

analogy no union could take place. Grafting in the case of the grape is performed to render that plant more hardy, to lengthen its life and to enable it to better withstand attacks of mildew rot, climatic changes, extremes of drouth and moisture, heat and cold, and, most of all, the phylloxera and all other insect pests. The question of the influence exerted by stock on scion or graft, or vice versa, is a complex one, but worthy of close study. The stock influences the graft only, so far as we know, in retarding or increasing the vigor, usually bringing the vine earlier into a bearing state.

It is now an accepted fact that there are certain species of American grapevines which are more or less under certain conditions capable of resisting effectually the attacks of disease, of which the most dreaded is the pest phylloxera, and it certainly would now be a waste of time to bring forward arguments to show that this is a fact. There are those, however, pessimists or egotists who would have us believe something else.

The next heading, "What to graft," is an arbitrary one, and cannot be correctly enlarged upon, literally. It will serve the purpose of classification. We want to consider "upon what species of vitis shall we graft in order to render our vineyards permanent?" What to graft on so-called resistant stocks is not within the province of this paper.

The recent report of the French expert, Professor Viala, was referred to, but that expert recommended vines for only limestone formation. Mr. Coates, out of some 30 distinct species of American grapes, would select three or four only, and out of 50 modes of grafting, one. He reduced the question of what stocks to best resist phylloxera in California to a very simple one. Vitis Riparia will about cover the ground, and Vitis Nuevo Mexicana may prove equally as good. There are in use here as resistant stocks Vitis Riparia and some of its varieties, Clinton Taylor and Lenoir, V. Rupestris, V. Californica, V. Arizonica, V. Estivalis, with several varieties. Objections to Rupestris are its aptitude for suckering and difficulty in rooting cuttings and receiving grafts. California is not really resistant, except in some few instances, when it seems hardy. Estivalis requires rich soil or it will not thrive. Arizonica is not adapted to a great variety of soils. Riparia is objectionable only because of its small wood, and where that objection is insuperable the Lenoir may be used. The Riparia thrives in cold clay or bedrock as well as in richer valley lands. Vineyards grafted to this stock six or seven years ago are to-day healthy, the union being complete in every way. Plant Riparia in rich valley land or shallow soils with clay subsoil and Lenoir in light soils or hill vineyards, but in thin poor soils or purest "adobe" don't try to raise a vineyard at all.

As to "How to graft," there is but one method fit to be applied to the vine, and that is the "English cleft" or "whip-tongue graft," applied either to stocks the size of a lead pencil or those two or three inches in diameter. The practice of splitting the stock and inserting a wedge-graft should be entirely done away with. The method of grafting recommended was described in detail. In a plowed vineyard of Riparia, one-year-old rooted cuttings, a gang of 10 men will graft 700 vines a day. The work of such a gang was outlined. If weather is dry, grafts should be kept in a can with a little water. Then first dig earth from vines for about 18 inches diameter and 10 inches deep, using spades. The grafter first cuts off any small surface roots, and then selecting the side having the straightest edge, he cuts obliquely from below, the slope being about 1½ inches long. The "tongue" is then made by cutting down a little across the grain to prevent splitting, and two-thirds of the distance from the bottom of the slope, the tongue being about one-half to two-thirds of an inch long. The graft or scion, about five inches long, with two or three buds, is cut precisely the same way and fitted or dove-tailed into the stock, by being pushed down as firmly as possible without breaking, the outer edge being made to be exactly parallel with the outer edge of the stock, on one side. It is useless to try to make the edges correspond on both sides. Others follow with calico strips ten inches long, one inch wide, and bind firmly around the graft. The importance of tying securely cannot be overestimated. Stakes are then driven on the southwest side of each vine and earth is then shoveled back and pressed down. Grafting three or four inches below the surface is necessary. Grafting should begin as early in March as weather will permit. Planting Riparia cuttings in nursery rows was recommended. Cuttings should be from 9 to 12 inches long—never longer. Leave above ground only enough to make the cuttings visible. Such cuttings, in a year, may be grafted where they stand and not put in the vineyard until the year following, thus saving labor.

Other Matters.

We have given but a few of the early subjects of the convention at this time. Other topics will be taken up later.

TO PREVENT MOISTURE IN SALT.—To prevent salt from becoming moist and caking so as not to sift freely from the cellars, a house-keeper recommends the use of a little cornstarch with the salt; a saltspoonful of cornstarch to about two salt-cellars of salt. The starch absorbs the dampness and the salt sifts more easily.

THE BOTANIST.

Botany for Farmers.

John Trimble, Secretary of the National Grange, is doing an enterprising thing in sending out bulletins from his office containing the papers read before Potomac Grange. A recent issue gives two paragraphs on agricultural botany which we publish as follows:

By Dr. Geo. Vasey, Botanist U. S. Department of Agriculture.

The inquiry may be made, of what importance is botany to the farmer? We will briefly attempt to answer this question. Botany investigates all forms of vegetation from the simplest to the highest, inquires into their structure and their affinities, into their development from the earliest germ to the mature plant, into the processes by which they are nourished, built up and propagated, as well as into their uses and properties. One of the highest traits of humanity is the ability to inquire into the laws of nature and to bring those laws to serve good purposes. In this, man shows his superiority to the brute. The farmer can study the laws of vegetation in the growth of the corn, wheat and other grains and plants with whose cultivation he is constantly occupied. He can watch the germination of his wheat or corn and observe that they develop but one seed-leaf. He may note the germination of his beans, peas or pumpkins, and he will note that they develop two seed-leaves. He will thus see one of the fundamental distinctions between two of the great classes into which plants are divided, viz., the monocotyledons and the dicotyledons.

He has the best opportunities of studying into the nature and kinds of roots, of leaves, of flowers and fruit, as they fall every day under his observation.

Just so far as he improves his opportunity in this direction, and learns all he can about the plants which come in his way, so far he is a botanist. There are, indeed, too many who never care to observe and investigate, and who know little more of the plants they cultivate than the horse who plows the corn. But the inquiring and observant farmer will find intellectual development. His corn and his wheat will have a new interest to him as they display their beauty and the marvel of their growth and their life histories. He can look beyond the plants which are the especial objects of his labor, and see new forms of beauty and of interest in the trees of his fields and in the wild plants which spring up everywhere around him. And he will be astonished to learn what a large field of vegetable life is before and around him. He may make the acquaintance of several hundred kinds of plants on one small farm. He may learn their names, relationship and qualities. This is practical botany, and it will improve his mind, elevate and ennoble his labor, and open to him new and satisfactory sources of pleasure and knowledge.

By A. A. Crozier, Assistant Botanist.

A farmer cannot know the name of every plant he sees, but he will find it convenient, as well as a source of satisfaction, to know the botanical as well as common names of the plants he cultivates, and of the most troublesome weeds, and of some of the more common trees and flowers. All this can be learned by an intelligent boy or girl before reaching the age of 18, if a parent or teacher has the knowledge, and now and then an enthusiastic young botanist will gain much from books alone.

Besides a knowledge of the names of plants, there are other interesting and important facts regarding plants which every young farmer should know, and those of which are hardly thought of as botany. He ought to know that the rots and molds upon fruits, and the souring of milk and other foods in the kitchen, are due to the growth of peculiar plants, some of them invisible to the unaided eye, and that these can be prevented as truly as weeds can be kept from a garden, if by any means the germs can be excluded or killed. Thus the canning of fruits preserves them by killing the germs which are present by means of scalding, and by preventing the access of other germs by sealing the can.

The young farmer ought also to know something about the production of improved varieties and how to maintain their standard in cultivation. The farmer cannot afford to buy new improved seeds for every crop, and still less can he afford to grow inferior varieties. He must get the best and endeavor to keep them so. But some varieties cannot be maintained in their perfection in all localities; many, such as oats, are better if imported every few years from a more northern source; some, as potatoes, are benefited by an occasional change between light and heavy soil. But most of our cultivated plants can, by proper cultivation and selection, be not only maintained but improved upon the farm. And here comes the importance of a knowledge of the sexes of plants, for plants have sex as well as animals. In some plants, as the willow and poplar, the sexes are on separate individuals; in others, as Indian corn, they are on separate parts of the same plants, while in ordinary cases they are on different parts of the same flower. In the improvement of plants these facts must be borne in mind. In the improvement of corn, for instance, it is not sufficient to select the best ears, for these may have been fertilized by pollen from inferior plants in other parts of the field.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Present Tariff.

It may be recollected that some time ago the N. Y. Tribune invited an expression of opinion by individual farmers, agricultural societies and Granges as to the influence of the tariff upon the agricultural industry and the changes in the tariff desired by farmers; that this drew out thousands of letters, which were submitted to a committee of prominent persons, ex-Sen. Warner Miller of N. Y. being chairman, who were charged with the work of making up a consensus of the views of the farmers of the country as shown by the letters. The report of this committee, made a few weeks ago, was accompanied by the following petition (embodying their findings) which farmers and farmers' organizations are invited to sign and transmit:

To the Speaker of the House of Representatives: The undersigned respectfully pray that agriculture may be more effectually protected by preventing fraudulent importation of cattle on pretense that they are for breeding only; by a duty of 20 cents per bushel on barley, with a proportionate increase of the duty on malt; by duties of 25 cents per bushel on potatoes and onions, \$2 per 100 on cabbages, \$3 per ton on hay, 10 cents per pound on hops, 20 per cent on beans and peas, 5 cents per dozen on eggs, 30 per cent on fowls and poultry and on vegetables in their natural state, or in salt or brine, not otherwise provided for, with no removal or reduction of duties on market-garden products now dutiable; by such increased duties on flax and on woolen goods as will effectually encourage the preparation of the fiber and the manufacture of goods; by abolishing all duties on sugar, with a bounty to home producers; by permitting the imports of leaf tobacco suitable for wrappers at the duty imposed on other leaf tobacco and repealing all internal taxes on tobacco, and by restoring to wool-growers the substantial protection enjoyed under the tariff of 1867, modified so as to meet later forms of foreign competition and of invasion.

To render the subject easier of apprehension and promote its intelligent discussion, we present below a table of importations of agricultural products into the U. S., for the year ending June 30, 1886, with rates of duty imposed and amount of duties collected on each article. For these data we are indebted to a much more extensive document, compiled from Government reports and published last year by the N. Y. Tribune.

Importations for Year Ending June 30, 1886.

5 \$1.61 per case of doz. qt. bottles, 5c. per pt. on excess.	
6 Including tank bottoms, syrups of cane or beet juice, Melada, conc ntrated molasses, etc.	
Bohemian-Oats Swindlers Worsted.	
The Supreme Court of Michigan has lately rendered a decision of great interest and importance to agriculturists in the case of McNamara vs. Gaggett, which is thus reported by the Detroit Farmer:	
It appears that on Oct. 21, 1885, Gaggett, the defendant, purchased of A. A. Griffith, superintendent of the Lenawee, Clinton & Gratiot Bohemian Oat Association, 25 bushels of oats, agreeing to pay \$10 per bushel therefor. Gaggett paid \$125 in cash and gave a 14 months' note for the balance. Griffith, as superintendent, gave Gaggett a bond, agreeing to sell for the latter 50 bushels of oats at \$10 per bushel on or before Oct. 21, 1886. Within ten days after the note was given, McNamara, the plaintiff, purchased the note, giving full face value therefor, with the knowledge, however, of what the note was given for and of the terms of the contract between the parties. Suit was brought in the Gratiot circuit by McNamara to recover, and the defendant pleaded the general issue and gave notice that he would contend that the note was given without consideration; that it was procured by deceit and fraud; that the consideration of the note was void on the grounds of public policy, and that it was an impossible consideration and could not be legally carried out without a breach of law and by perpetrating a fraud, etc. Judge Hart ordered judgment for the plaintiff for the face of the note with interest. The Supreme Court's decision, as written by Justice Chas. D. Long and unanimously concurred in by the other judges, says:	
"There is no statute in this State authorizing the incorporation of any such company, and the representation made by Griffith to the defendant that this so-called Bohemian Oat Association was an incorporated company was false and untrue, and known by this superintendent (Griffith) to be false at the time of procuring this note; and it was a material representation and one of the inducements to defendant to make his note and take this bond; and the court finds from the evidence produced on the trial that the defendant would not have made the purchase but for the bond or obligation mentioned—that is the bond of a corporation which Griffith * * * falsely induced defendant to believe was an incorporated company. * * * This fact would have defeated the recovery of the payee upon the note; and these facts all being known to plaintiff before he paid a dollar for the note, must be held to defeat his recovery.	
"Is this contract also void on the grounds of public policy? The carrying out of this obligation on the part of Griffith meant the finding of another victim within one year who would take 50 bushels of Bohemian oats at \$10 per bushel upon giving to him a contract to sell for him the next year 100 bushels at \$10 per bushel, and so on, <i>ad infinitum</i> . * * * The court cannot shut its eyes to the fact that this is only one of thousands of similar contracts made within the State within the last few years. * * *	
"The very scheme itself bears evidence upon its face that it is a fraud and a snare, and yet so cunningly devised that in the hands of sharp, shrewd and designing men hundreds of the unwary have been defrauded, and the courts should set their seal of condemnation upon it and pronounce it, as it is, a contract void on the grounds of public policy. It is upon its face a gambling contract. * * * The argument that holding such contracts void on the grounds of public policy annuls a contract already concluded has no force if the contract is at war with the established interests of society and in conflict with the morals of the time.	
The fact that individuals may suffer can in no manner affect the question, as the interests of individuals must in many cases be subservient to the public welfare. These oats were worth no more than any other oats, and could not be sold legitimately for more. Had the note gone into the hands of	

a bona fide purchaser, who had no notice of the consideration for which it was given, the principles here laid down would not apply; but we have taken the note and bond together as forming a contract between the parties, and construing them together, as though written upon the same piece of paper, and as between the original parties and those purchasing with notice, we hold such contracts void. The judgment of the lower court is reversed and judgment entered here in favor of defendant, with costs of both courts."

Farewell, Bohemian oats, red-line wheat, hullless barley, and kindred frauds! Our farmers have had a costly experience with them, but the experience ought to be of some value.

The Anti-Debris Protest.

The Sutter Farmer of last week acknowledges the receipt of the following communication:

SACRAMENTO, March 6, 1888.
Geo. Ohliger, Manager of the Anti-Debris Association of the Sacramento Valley—DEAR SIR—I am instructed by our Board of Supervisors to communicate with you in reference to your communication on the debris matter and the Biggs bill now in Congress. Your request was unanimously complied with, which I return to you. You have the assurance and favorable consideration on behalf of the noble work in which the Association is engaged, and will always meet with the hearty co-operation of our Board. Trusting that favorable results will follow your efforts in Congress on behalf of our grand old Sacramento valley, Very respectfully,
WM. B. HAMILTON, Clerk of Board.

In addition to Sacramento's Board of Supervisors, the Supervisors of Yuba, Sutter, Colusa and Yolo have indorsed the protest referred to, so far as known up to going to press.

Postal Telegraphy.

Advices from Washington are that the House Committee on Commerce, by a vote of 7 to 6 has authorized a favorable report on Rayner's bill for a system of postal telegraphy. The bill appropriates \$8,000,000 and places the general supervision of the system under a Fourth Assistant Postmaster-General, the work of establishing lines to be done under the direction of the Secretary of War. The tariff for 20-word telegrams is 10 cents for 500 miles or less; 20 cents for 500 to 1000 miles, and proportionately increased rates for longer distances. Postal money orders by telegraph are charged for at existing rates, plus telegraph tolls. The report accompanying the bill claims that the service will be self-sustaining, defends the Government's right to build and operate telegraph lines, and maintains that public opinion, good faith and justice do not require the Government to purchase the property and franchises of the Western Union.

Stockton Grange.

Some time since we mentioned the fact that Stockton Grange had voted to meet twice a month instead of weekly. We have since learned that some good members would not give it up so easy, and at the following meeting it was agreed that on the Saturday when no Grange meeting was to be held they would have an open meeting and social time. So far the attendance has been best at the social meetings.

A STATE PICNIC.—Is there not some enterprising section of this State that wants a 5000 Grange and farmers' picnic this summer or a three-days' Grange camp-meeting? Don't all speak at once! We believe, however, the day is coming when such grand gatherings will be held annually in this State and Oregon, and for the public good, too.

WEINSTOCK, LUBIN & Co.—The appendage to the well-known name Weinstock & Lubin (Sacramento) signifies that the style of the firm has been changed and a corporation formed under the laws of California. The following are the officers: H. Weinstock, President; D. Lubin, Vice-President; A. Bonheim, Secretary and Treasurer; E. Bonheim, Assistant Secretary; H. Weinstock, D. Lubin, Wm. Steels, A. Bonheim, Charles Philip, Directors. In addition to the old names, we recognize among the new ones some at least who have long been with the firm and have become thoroughly imbued with

FRUIT MARKETING.

Shall the Fruit be Sold at Auction?

The following communication shows that the directors of the Fruit Union cannot decide whether or not to declare in favor of the auction method of sale in Eastern markets, and they solicit the decision of those who will ship the fruit, and are therefore most interested in the question. We commend the subject to the attention of all:

At the last annual meeting of stockholders of the California Fruit Union, a resolution was passed, recommending to the Board of Trustees that the auction plan be tried in Chicago the coming season.

In compliance with this recommendation, the trustees are now considering the matter, but as there is a division of opinion among them concerning the wisdom of selling our fruits in Chicago by auction, it has been suggested that, before any decision is arrived at, the opinion be learned of leading fruit-growers and shippers who are members of the union.

With this purpose in view, I now address you, and ask that you carefully consider the following, and give the Board of Trustees the benefit of your judgment at the earliest possible date. There is to be a meeting of the directors within two weeks, at which meeting this question is to be definitely settled. Your prompt attention is therefore earnestly requested.

In order that you may understand the matter more thoroughly, it may be well to state briefly the reasons offered by those who look with disfavor upon introducing the auction plan in Chicago, and the reasons also that are set forth by those who are in favor of such plan.

An Adverse View.

Among those who doubt the success of selling by auction in Chicago are several shippers, and also Porter Bros. of Chicago. It is held by these, and especially by Mr. Porter, that there are strong probabilities of combinations being formed among Chicago buyers, so as to get our fruits at their own figures, and that the system of selling by auction in Chicago would be a much slower one than selling at private sale. It is claimed that by the latter method much of the fruit is sold in advance of arrival, and that a large part of the receipts of fruit are immediately reshipped, so that the fruit reaches the consumer with the utmost promptness.

Whereas, they claim that if sold by auction it would first have to be unloaded from the cars, arranged according to brand, and, after being sold, then reshipped to other points, involving at least one day's delay, which must seriously affect the value of the fruit.

It is furthermore claimed that, while the auction plan has been successful in Boston, New York, and other Atlantic cities, it has been tried in Chicago on bananas and other tropical fruits without success; and that while the auction plan may succeed in Chicago during the earlier part of the season, it would be an assured failure during the height of the season, when great quantities of fruit were being poured into Chicago from all directions.

They furthermore say that, though large quantities of California fruits were successfully sold by auction last year in Boston and New York, this is no proof that the method will continue to be a success in those markets, claiming as one reason for the increased demand, the fact that the Eastern fruit crop was largely a failure last year; and further, that while 50 carloads were sold by auction in New York, aggregating in sales about \$55,000, Porter Bros. claim to have sold at private sale to Dudley, Clapp & Doe of New York \$140,000 worth of California fruit during the same season.

Per Contra.

In reply to these objections, those who have faith in the success of the auction plan make the following answer: They say that, so far as combinations being formed among bidders is concerned, such a thing, thus far, has been impossible at the sale of fruits in any of the Eastern cities; and that while it might be done among such few Chicago dealers as now handle California fruits, their number thus far being limited to four or five, that such a thing would be impossible with the hundred or more Chicago fruit-dealers, who would at once take hold of California fruits and push them with every energy if they were placed on an equal footing with the few now in the trade.

As proof of this fact, they point to the experience in Boston during the past season. Prior to 1887 there were but three or four wholesale fruit-dealers in Boston who handled California fruits, but as soon as the auction plan was adopted, which gave all an equal chance, nearly all the dealers of any note in Boston became interested, and toward the close of the season California fruits were, for the first time, to be found in the hands of dozens of fruitmen. This resulted in greatly increasing the consumption, and largely explains why it is that 40 carloads were received there this year as against one solid carload the year previous; the remaining shipments to Boston prior to 1887 having been made through Chicago, and, as a rule, in small lots. Though the consumption in Boston as compared with previous years was very large, the agents there say that, "as long as they can sell these fruits at prices within the reach of the multitude, their market can take

much larger quantities than the 40 carloads received last year."

The advocates of the auction plan therefore maintain that its adoption in Chicago will be followed by the same results, and for every dealer who now handles California fruits in Chicago, there will be 20 who will come in and help distribute and popularize it, in this way vastly increasing the demand.

The Auction Superior.

In answer to the point made that fruit cannot be sold by auction as speedily as by private sale, it is held that for small lots fruits may be distributed more rapidly by private sale than by auction; but that experience everywhere has shown that for large quantities of fruit the auction is the only method by which the business can be made expeditious. As proof of this, the experience in Mediterranean fruits, Florida fruits, as well as California fruits, is pointed to.

Entire shiploads of lemons and oranges, that would take many days to dispose of at private sale, are sold within an hour in the auction-room. On this point the New York agents, Sgobel & Day, say as follows: "Five cars of fruit sent to any commission merchant in New York could not be sold in a day, as we sell it by auction. A large share of it must simply lay over until the next day, or even the day following; and where would apricots, peaches and other such perishable fruits be under these circumstances?"

Blake & Ripley of Boston, in speaking of the difference in expedition in selling California fruits by auction, as compared with private sales, say: "We could never hope to handle several carloads of California fruit at any one time, and successfully distribute it at private sale, without much loss by decay. It would simply be impossible to do it, and our experience this season has made that point clear. On one morning we received six carloads of California fruits, this being a regular shipment, and a delayed shipment, both of which reached us at the same time. Had we been selling at private sale, such a quantity of California fruit coming at one time would have snowed us under. We would have been utterly helpless, and before we could have reached the last lot in the last car, much of the fruit would have become worthless; but selling it as we did by auction, the six carloads were sold within an hour after the bidding began, and within two or three hours more it was scattered in all directions, and within 24 hours the money for this fruit was on the way to the growers and shippers in California."

Why It Would Win in Chicago.

Concerning the failure of selling tropical fruits by auction in Chicago, it is held that such failure was owing to the fact that bananas and the other foreign fruits offered in this way were not sold exclusively by auction in Chicago, and to make the auction plan a success, such as it has been in Atlantic cities, the auction must be the chief source of supply and not a mere side issue.

But since it is the intention, if the auction plan is adopted in Chicago, to sell all California fruits in that way, the plan cannot be otherwise than a success, since all who deal in California fruits must attend the sales to get supplies, which in itself will insure a success.

It is admitted that, if great quantities of California fruits are sent into Chicago when the market is glutted with domestic fruits of a similar character, then satisfactory prices cannot be hoped for at auction, nor can satisfactory prices be looked for under any other system if the market is glutted.

It is held that no plan can be devised whereby fruit will bring a first-class price with an overloaded market, but the advocates of the auction system claim that, even with an overloaded market, more can be realized by auction than if the fruit is gradually sold at private sale.

In answer to the fact that nearly three times as much fruit was sold by private sale through Porter Bros., in New York City, than was sold by auction, Sgobel & Day, the New York agents, answer as follows: "The capacity for receiving California fruits in New York was not at all tested. Some fifty cars came, but a hundred could have come just as well as the fifty, and would have done equally well provided the kind of fruit was sent such as we wanted."

Those who favor the auction plan say, in conclusion, that it is evidently the determination of certain parties to cripple the auction plan in New York and Boston, and to do this a guerrilla warfare was opened by them against the auctions last year in New York and Boston. Supplies were got from Chicago, and on the days of auction sales the same brands of fruits that were being offered in the auction-room were quoted by these parties at private sale at from 75 cents to \$1.25 a box less than on other days, so that it was a frequent occurrence that the same brand of fruit was to be found in the auction room direct from California and also in private hands through Chicago, thus resulting in the depression of prices at auction.

The advocates of the auction plan, therefore, maintain that if the markets of Boston and New York are to be protected and preserved for the California grower and shipper, this guerrilla warfare must be stopped, and the adoption of the auction plan in Chicago will be a complete and, in fact, the only check, since it will compel those who have been waging this war against the auctions to buy at public sale, thus cutting off all possibility of favoritism, and compelling them to pay more for their fruit

than others are willing to give before they can get it.

Unless the auction plan is adopted in Chicago, it is held that desperate efforts will continue to be made against the success of the auction in the New York and Boston markets, which, while it may cost the parties conducting this warfare great sums of money, is liable also to discourage those sending to the far Eastern markets, and may ultimately end in bringing about the condition so much desired by the Eastern auction opponents, namely, limited supplies for Atlantic cities at fancy prices.

Stockholders Must Decide.

The query, "Shall the auction plan be adopted for Chicago?" being the "burning question of the hour," it is of the highest importance that the matter receive the earnest thought and consideration of all concerned. Whichever way this question is decided, it must have a great influence upon the future of California green fruits in the East, and I therefore trust that you will give this matter your careful consideration and forward your conclusions at the earliest moment.

Yours respectfully,

H. A. FAIRBANK, Secretary.

Bench-Show of Dogs.

The Pacific Kennel Club has long been planning to give a bench-show here this spring, and the exhibition will take place in the Mechanics' Pavilion, opening on Wednesday, April 4th, and continuing throughout the week. All entries must be made by Tuesday, March 27th, on blanks which can be had on application to Supt. J. F. Carroll, 624 Market street, S. F. An entry fee of \$3 will be charged for each dog entered, and covers care and feed of the animal during the show. A free season ticket will be issued to each exhibitor, for his or her individual use only. Rules and premium lists can be had of the superintendent, as above. The show will be governed by the revised rules of the American Kennel Club.

The Premium List

Includes mastiffs, St. Bernards, Newfoundland, German mastiffs or Great Danes, deerhounds, greyhounds, fox-hounds, pointers, English, Irish and black-and-tan setters, spaniels of several varieties, collies, dachshunde, beagles, bulldogs, retrievers, Dalmatian or coack dogs, terriers of different sorts, pugs, poodles, etc. The prizes in each class are usually \$10, \$5 and diploma for 1st, 2d and 3d of each sex, with \$5 and \$3 for puppies under 12 months; but there are some exceptions. There is also a special prize-list—\$10 each for the best pointer, best English setter, best Irish setter, best black-and-tan, best greyhound, best fox terrier, best bull terrier, best kennel (three) of greyhounds, best kennel of pointers, best kennel of English setters, best kennel of black-and-tan setters and best kennel of Irish setters.

The following additional specials are offered: For best pug Will & Finck offer a set of alligator harness valued at \$7.50; for best hound a fancy collar worth \$10 will be given by the Golden Rule Bazaar; for best dog in the largest class the John Wieland Brewing Co. will donate \$20; for the best dog exhibited by a lady O. A. Tulle will present a silver collar worth \$5; Wm. Schreiber offers \$20 for the best greyhound; James E. Watson offers \$10 for the best trick dog; Stuart Taylor offers \$10 for best Great Dane; A. W. Manning offers \$25 for best rough-coated St. Bernard dog or bitch; Marin County Gun Club offers \$12.50 for best pointer and \$12.50 for best setter; Dupont Powder Co. offers one 25-pound keg of Dupont's New Brand Summer-Shooting powder for the best Irish water spaniel in show; also, a similar prize for best setter in show.

The Southern Pacific Co. will transport free all dogs for exhibition, if accompanied by the owner or the owner's agent, and Wells, Fargo & Co. will carry dogs for the show and return them to their shipping-points at half-fare.

PROSECUTING THE TIMBER GRABBERS.—Besides taking steps to secure the cancellation of patents to timber lands in Humboldt county, procured fraudulently, the Secretary of the Interior has directed the Attorney-General to institute a joint civil suit against the Northern Pacific Railroad Co. and J. C. Jones & Co. of Portland, Or., and Williamsport, Pa. The Northwestern Lumber Co. of Knappton, W. T., and Samuel France and the Northern Pacific Lumber Co. are also defendants. The suits are for the value of pine timber estimated at \$219,000, alleged to have been unlawfully cut from public lands in Washington Territory.

STALLION SHOW at San Luis Obispo Agricultural park, Saturday, March 24th. All horse-owners are invited to make arrangements to join the show, and will please communicate with H. Moskowitz, San Luis Obispo.

ANTEO, the well-known trotting stallion, has been sold to a Kentuckian for \$20,000. He is a half-brother of Antevolo and has a record of 2:16½. He was sired by Stanford's Electioneer, dam by Columbia.

THREE physicians have left Paris for Australia, taking with them germs of chicken cholera. The Australians are about to adopt Pasteur's plan of destroying their rabbits, in the face of a very strong opposition.

News in Brief.

PEOPLE will have to pay higher prices for canned salmon this year than they did last.

THE Fire Underwriters intend to enforce strict rules for the use of petroleum as fuel.

THE citizens of San Diego are making efforts to drive the criminal element away from that city.

SALINAS CITY has voted \$25,000 bonds to improve the local bridges, culverts, roads and streets.

A SPECIAL election will be held in Benicia, April 9th, to decide whether or not to issue \$30,000 bonds for water works.

NEW YORK, Washington and surrounding regions had this week the most severe storm ever experienced in those latitudes.

HENRY BERGH, the founder and president of the Society for the Prevention of Cruelty to Animals, died in New York on Monday last.

THE State Jute-Mill, at the San Quentin prison, commenced this week to run night and day. The electric-light plant was started up on Sunday night.

LOBSTERS are to be sent here this year by the U. S. Fish Commission, and the experiment of raising them in Pacific waters will again be tried.

THE Lick Observatory is hereafter to be known as "The Lick Astronomical Department of the University of California," by resolution of the Regents.

THE Italian laborer is making considerable trouble for the French laborer in France. There are said to be not less than 250,000 Italians at work there now.

THE 12 firms controlling the borax output of this coast have an association known as the Borax Board of California, and prices are now kept up so that the business is profitable.

MRS. CHARLES CROCKER has given \$10,000 to purchase a lot for the building site of a home for young women. The home will be built by the Young Woman's Christian Association.

THE United States Attorney-General has been ordered to bring suit to secure the cancellation of patents issued on certain timber entries in the Humboldt (California) Land District.

REPORTS received at the Navy Department show that very satisfactory progress is being made with the work of building up the navy. The Charleston, building in this city, is the most advanced of her class.

GOVERNOR STEVENSON of Nevada has issued a proclamation making the 6th of April "Arbor Day," and recommending that school children and others plant trees, vines, shrubs and flowering plants on that day.

It is thought that the River and Harbor bill this year will appropriate for Oakland harbor, \$150,000; Wilmington, \$75,000; Humboldt bay, \$100,000; San Joaquin river, \$40,000, and other places on this coast smaller sums.

THE mortality in 80 cities and towns of the State, containing 722,500 inhabitants, last month was 1084, of which 517 deaths occurred in San Francisco. The percentage of deaths was 1.5 per 1000, against 1.8 for the previous month.

THE storage capacity of the South Yuba Canal Co. is 600,000 inches, or 960,000,000 gallons. This supply is available for most parts of Nevada, and some parts of Placer counties. This is one of the largest, if not the largest, water storage system on the continent.

SINCE redwood has come into use for making furniture it has advanced greatly. A few years ago the kind used for furniture could be bought for \$10 a thousand, and now it is \$90 to \$100. The burls or knobs which appear like excrescences on the trunk are worth \$250 per thousand.

THE Sacramento Bee says: It is said on good authority that the large railroad machine-shops are to be enlarged to twice their present size. As soon as sufficient cars can be obtained to haul the material here, work will be commenced. The new addition will join the old shop. Room will be made by the removal of two or three buildings near the machine-shop.

THE following roads have agreed to transport exhibits free of charge to and from the next Mechanics' Fair in this city: San Francisco & North Pacific and North Pacific Coast. Valuable concessions in regard to the carrying of exhibits have been made by the Southern Pacific. The Pacific Coast Steamship Company have also agreed to carry all exhibits to and from San Francisco without charge.

SOME time since, a number of Columbia-river canners agreed to pay one cent a case on the spring pack to the State Fish Commissioners, the proceeds to be applied for the benefit of the State Hatchery at Clackamas and the enforcement of the law protecting salmon. The spring pack was 354,000 cases, and if all paid in the amount realized would have been \$3540. So far the amount collected is \$2000.

THE buildings of the new Chicago Packing and Provision Co. on the bay shore, outside of Oakland, are being rapidly pushed forward. The following officers have been elected: President, William Selover; Vice-President, J. S. Emery. Directors—F. K. Shattuck, G. W. Grayson, W. W. Camron, A. J. Snyder and B. Hinckley; Secretary, Robert Grayson, and Confidential Agent, J. P. McElroy.

Home! Sweet, Sweet Home!

Written for the RURAL PRESS by H. L. K.

Home! home, sweet home! no sweeter sound
In all the tongues of earth is found.
It speaks of peace, of soft repose,
Of gathering in, when labors close,
'Round the warm hearth, where kith and kin
Open their hearts and peep within,
Where man presides and woman loves,
The nest of prattling turtle-doves.

Home! Oh, how many flit before
My lingering gaze, as things of yore,
Home here! Home there, oh, which, and where,
Is the sweet home that's shadowed there?
How many homes have faded quite!
And which is this, my home to-night?
Full many a step makes up the stair,
Beginning, when? and ending, where?

'Tis home indeed on mother's breast,
Where our first infant life is blest;
Peace, plenty, rapturous joy is there,
With none to rupture what to share,
There, near her heart, and nearer still
To nature's fountain, at our will,
We draw the nectar, smile and nod,
And dream her angel face is God.

The view dissolves, and others stand
Around her feet, and hand in hand—
Brothers and sisters, father, mother,
Why, this is home, sweet home, another.
There, there indeed was holy ground,
If ever such on earth were found.
What are the world's dark, evil ways
Compared to those gay youthful days?

And still another home looms up
To season life's full flowing cup—
My wife! my babe! my own sweet home!
At last to my fond heart has come.
Nay, this is home, the dearest, best;
For this I bargain all the rest.
My heart pours out its love as never
Can exceed, not for forever.

Still home must shift, move on as 'twere,
From the sweet first-born babe, and her;
Around me stand maidens and men,
And all my own, though eight or ten.
This group is home indeed to me,
Where I am king, and queen is she;
And these our subjects, loyal, true,
Till life is past and life is through.

Home! yes, for I am on the bed,
Where death demands this old gray head;
'Tis home indeed, for here are found
My own, my dearest, standing round.
Farewell! farewell, dear ones, farewell!
How many homes have we to tell?
Stand closer! all are fading fast,
And Heaven alone is home at last.

A Suggestion.

[Written for the RURAL PRESS by I. H.]

The house was such as one often sees in California, outwardly a mere shanty of rough red-wood boards nailed on perpendicularly with narrow battens over the seams to exclude the wind and rain, the door home-made, the windows small and the stovepipe passing out through a hole in the roof. Unmistakably it stood upon rented land, for there was neither vineyard nor orchard in sight, nothing but a wide stretch of grain-fields from which not even so much as a garden spot had been cleared.

Yet there was no look of barren poverty about the premises; the rough boards had lately received a fresh coat of whitewash, the small windows were spotlessly clean and fitted like the doorway with frames covered with mosquito netting to keep out the objectionable fly. Morning-glories and sweet peas climbed up to the low roof, and a wide shelf under the window held quite a dazzling display of scarlet geraniums, begonias and pinks.

Once inside you would easily forget the meager style of the building, so deftly had all the deficiencies been concealed. The walls were neatly papered and hung with pictures better chosen than those which may be seen in many a more pretentious dwelling. There was a pretty carpet on the floor and muslin curtains shaded the windows; the furniture, though simple and inexpensive, was all tasteful and appropriate, while little bits of artistic needlework in various devices adorned each possible nook and corner.

A peep through a half-open door into bedroom, dining-room or kitchen revealed a like condition of affairs; everything was neat, dainty and new. Yes, new, even to the mistress of the house herself. A slight girlish figure in a light calico dress and white apron, seated in a low rocking-chair reading; it required little penetration to discover here a bride and her belongings. Her companion, who sat at a small table writing, was an elderly woman with dark eyes and beautiful white hair. No one could see her once and fail to remark the mingled sweetness and dignity of her expressive countenance, the indescribable grace and ease of manner, which only come from life-long association with people of intellect and

refinement. To the younger woman she was a revelation.

But it is time to introduce them by name. Emily Archer, the mistress of the house, and her husband's aunt, Miss Hartwell, who was here on a visit purposely to make the acquaintance of the young wife of her favorite nephew. It had been a delightful visit; the two women who were so utterly unlike in every respect, yet finding each other exceedingly lovable and not a little interesting.

Emily was a California country girl, born and brought up on a ranch, educated at the district school, and entirely ignorant of what in the cities is called society. But she had known the best of all training, for her mother was a lady in thought, word and deed, and her father a man of decidedly literary tastes. In their companionship she had grown to womanhood, gentle and modest in voice and manner, and with an eager interest in everything that could tend to cultivate her mind and enlarge her opportunities of self-culture.

Miss Hartwell, on the contrary, had been from her cradle accustomed to the refinements of wealth and ease. She had lived in an atmosphere of intellectual ascendancy; she had traveled everywhere, had seen everything and everybody worth seeing; could speak half a dozen languages, draw and paint, and was a fine musician. It was the wonder of wonders to Emily that with all this she was so sweet, so unaffected and sympathetic, as ready to give a helping hand in all the household work, as though she had done nothing else all her life. Equally was it a matter of surprise to Miss Hartwell to find her nephew's "wild flower" so free from uncouthness or asperity of any kind.

Now and then she detected a little wistfulness in Emily's manner, as she asked some questions about the ways of that world of which she knew so little. But as yet the feeling which gave rise to it had not been fully expressed.

Now, however, as they sat together, there was a sudden exclamation from Emily, and the paper she held in her hand was dropped with a gesture of despair. Miss Hartwell looked up and seeing the flushed cheek and the eyes half-filled with tears, asked in unaffected concern:

"Dear child, what can be the matter?"

"Oh, nothing," said Emily with a still deeper blush for her self-betrayal. "I am very silly, and I have disturbed you at your writing."

"Not at all, dear; I have finished," said the other, folding her letter. But she did not repeat her question; she only looked kindly at her companion and waited.

"I will tell you then, Aunt Alice; but I don't know that you will understand me, you are so different. It was only this: An advertisement of a ladies' paper that professes to teach its readers not to say and to do things that will make folks wonder where you were born."

Then seeing that Miss Hartwell only looked puzzled, she added: "When I read that I felt as if some one were sticking needles and pins into me."

"But why?" asked the older woman, still unenlightened.

"Why? Because I am one of that class of women who is supposed to need such instruction, and to be told of it in that way hurts—"

"Well, my dear," said Miss Hartwell, gently, "it never would have occurred to me that you needed anything of the kind, or that you could think so."

"Indeed I do. You may not understand it, Aunt Alice, for you know just what to do and say at all times. You could accept an invitation to dine with a Queen or an Emperor and go and enjoy yourself, while I would die a thousand deaths at the very thought of it. And yet it is not my fault that I was born on a farm and know nothing about the etiquette of society. I suppose I am silly and oversensitive, but when John talks of taking me to the East, I feel a cold shiver creeping over me. I know I would shock everybody by my country manners."

"Did you ever shock me, dear?" asked Miss Hartwell.

"Oh, if every one were like you I wouldn't be afraid; but that is a little too much to hope for."

"I can answer for every one in John's home being like me in one respect, Emily, in readiness to give a loving welcome to his wife. But I think you are making yourself needlessly unhappy, my child, by ignoring the difference between good manners and etiquette—the latter changes; the former is the same at all times and in all places. When we get that invitation to dine with royalty we will both go without any misgiving, though, at the same time, we may need a little instruction in matters pertaining to the ceremony of courts."

Emily looked but half convinced. "It is very kind of you to talk so," she said, "but, after all, there is the advertisement, and it was evidently expected to be effectual in securing subscribers."

"Yes; for every one is not so easily wounded, and, though the expression is a little rough, there are those who will accept it as truthful. I think they are hardly like you, Emily. You have had a different training; but I have been in country homes where such a paper might be a great blessing to the chance visitor, at any rate, if not to the host and hostess."

"Yes," said Emily, "so have I. I suppose it would suggest the use of napkins, the removal of the meat and vegetables before the dessert. Perhaps it might teach people not to ask any one to take a piece of pie on the same

plate used for dinner. I have seen that done. But you see I am criticising my neighbors when I ought to ask to be criticised myself. Come, Aunt Alice," she said coaxingly, "now tell me honestly what mistakes I made last week when your friends, the Elliots, were here to dinner."

"Do you really mean it, Emily, and will you not be hurt?"

"Indeed I will not. I will take it as a great kindness."

"Very well, then, I will tell you; the dinner was perfect, everything well cooked and nicely served; the table was prettily arranged; the only fault any one could have found was in the seating of your guests."

"Why, Aunt Alice," exclaimed Emily in surprise, "the gentlemen all sat by their wives."

Miss Hartwell smiled.

"That was the trouble, Emily. It is a country fashion, and, of course, it seems all right, but if you will think a little, you will see why it is not the best plan. When you invite your guests, they are expected to enjoy each other's society as well as the good things you have provided. When they sit down to the table, if you seat each man by his wife, what are they to talk about? Their own private affairs? They have opportunity for that at home. They are not likely to exert themselves for each other's entertainment in the presence of other people, and so they subside into silence and eat their dinner with as few words as possible. If you had placed Mr. A. next to Mrs. B. and Mr. B. beside Mrs. A, they would have kept each other amused and entertained all the time. One of the great arts of a clever woman in society is the bringing together of the right people, who will need no further effort on her part to keep the ball of conversation rolling."

Emily sat for a few moments in silence, then she said: "Thank you, Aunt Alice. When I have read of brilliant conversation at dinner parties, I have sometimes wondered why it is that in the country people sit at the table as if they had not an idea in their heads. You remember the wedding we were at last week; everybody was laughing and talking in the parlor, but when we went into dinner we sat there in solemn silence. It was the hardest thing I ever tried to make a single remark. I did not understand it then, but I believe you have given me the explanation. The dullness of a country party comes from a mistake in the way of seating the guests."

(Is it possible that she was right?)

THE LOTTERY EPIDEMIC.—We suppose the subject of lotteries occupies the minds of more people in California to-day than any scheme of speculation. The Louisiana Lottery Company sells thousands of tickets every week of the year in this State, in fact we believe one of its best customers is the State of California. Twenty-six States of the Union forbid the Legislature to authorize them by constitutional provision. It is made a penal offense in this State to deal in lottery tickets, yet the traffic goes on and money to the extent of thousands of dollars weekly is sent from here to New Orleans for such tickets. There is no trouble found in purchasing tickets. A few prizes are drawn at intervals. These are published, and the luck of one individual out of 10,000 is paraded as inducement for the masses to buy. Lotteries are of ancient date. Almost all the modern States at one time or another employed lotteries as a means of revenue. Many charitable institutions have been founded from the proceeds of lotteries. But they have invariably been found to exert a mischievous influence upon the people. They are generally patronized by the poorer classes who cannot afford to squander money. And the hope of a sudden fortune has always had a tendency to divert them from persistent labor and patient thrift. The experience of the world is against the lottery form of gambling. Its devotees become demoralized and discouraged after years of disappointment, and lose all relish for the slow and sure way of making a fortune. They become habituated to imagining themselves rich when they are penniless and acquire habits their means of providing for are inadequate. The rule is that men do not win fortunes or the semblance of fortunes in lotteries. Better to invest the money spent on them in beefsteak.—*Nevada City Herald.*

CROWS CASTIGATE A CAT.—Two young men, who lately crossed the mountains from Santa Barbara to the Santa Ynez valley, witnessed a rare performance, which one of them describes in the *Independent* thus: A furious cawing and flapping of wings by a large flock of crows attracted our attention to a singular combat. A large wildcat, on the steep side of the mountain near the river, was surrounded by a flock of angry crows, who were flying and pecking at him in a furious manner. The cat, which was retreating, would pause now and then and strike viciously at his tormentors, but they were too quick for him. The fight continued for some minutes, and the crows were getting the best of it, when they were disturbed by our presence and flew complainingly away, while the cat made a gray streak up the side of the mountain and disappeared from view.

A HINT FOR THE COOK.—To test cake in the oven never insert a broom splinter, but draw it gently forward and put the ear close to the loaf; if it be not done there will be a little sputtering sound. When it is thoroughly baked there will be no sound.

Immortality.

Foiled by our fellow-men, depressed, outworn,
We leave the brutal world to take its way,
And "Patience! in another life," we say,
"The world shall be thrust down and we upborne!"

And will not, then, the immortal armies scorn
The world's poor routed levies? or will they
Who fainted in the heat of this life's day
Support the feivors of the heavenly morn?

No, no! the energy of life may be
Kept on after the grave, but not begun!
And he who flagged not in the earthly strife,
From strength to strength advancing—only he,
His soul well knit and all his battles won,
Mounts, and that hardly, to the eternal life.

—Matthew Arnold.

A Russian Peasant's Adventure.

Many years ago, when Peter the Great was reigning in Moscow and St. Petersburg was not yet built, a Russian peasant in a tattered sheepskin frock was cutting turf in a lonely spot on one of the great plains of Central Russia. It was a burning summer day, and his work had made him very hot and tired; but one could see by his downcast face and hanging head that some great trouble was pressing harder upon him than even this fatiguing labor.

Looking up in one of the pauses of his work, the turf-cutter saw a tall young man coming slowly over the plain to meet him. The newcomer wore the green gold-laced uniform of the Palace Guards, but the lace was so faded and the coat itself so threadbare that one would have judged this officer to be either a very careless man or a very poor one.

"He looks as if he had lost his way," muttered the peasant, as the stranger halted and glanced doubtfully around him. "I must see if I can't put him right. It's always a comfort when one's in trouble one's self to help somebody else out of it."

The young officer, however, did not look like a man who would need much help from any one. He was immensely tall—taller by far than any one whom the peasant had yet seen; and his broad chest and long, sinewy limbs showed signs of enormous strength. His smooth, handsome face wore a rather sad look, and he walked slowly, as if either tired or in deep thought; but there was an air of unconscious power in his upright bearing and in the firm set of his head as if he felt himself to be a match, and more than a match, for anything that he might meet with. Altogether, he seemed to be the sort of man whom one would much rather have for a friend than for an enemy.

"Hello, brother!" cried the stranger, in a deep, strong voice. "Am I far from the village of Volkhoff? I think I must have gone wrong, somehow."

"Your honor has gone wrong, indeed," answered the peasant, shaking his head. "It's a long way to Volkhoff from here. You must keep eastward till you come to a big tree standing all by itself, and then you must turn southward as far as a small lake. Then, after that, you'll make a big bend round to the right, and—"

"Oh, I shall never be able to remember all that," said the officer, laughing. "Suppose you come along with me and show me the way yourself."

"I'd do it gladly, your honor," said the peasant, hesitating; "but, you see, if I lose my day's work, then—"

"You shall lose nothing by helping me, be assured of that," said the young man, gravely. "How much do you earn in a day?"

"Twenty kopecks" (fifteen cents).

"Twenty kopecks!" echoed the stranger, looking down pityingly at the poor, tired man, quite a dwarf compared with him, who worked so hard for such scanty pay. "Well, here's half a rouble (thirty-seven cents) for you; and now come along. By the by," he added, "if we pass near your house you might carry your turf home at the same time."

"It would need two journeys to do that, your honor."

"Two? Why, these four baskets would surely hold it all."

"There's not a man in Russia, your honor, who could carry all four at once when they're full. The two smallest are quite enough for me."

"Not a man in Russia, eh?" said the young officer, scornfully. "We'll try that. Sling those four baskets over my shoulders and then fill them."

The laborer hesitated, but the young man spoke like one accustomed to be obeyed. As he stooped to receive the baskets, the peasant slung them over his shoulders, two before and two behind, and then piled in the turf till all four were full to the very top. Then it was a grand sight to see the great tower-like figure rise slowly to its full height under that enormous load, and stride away so briskly that the amazed peasant had hard work to keep up with him.

A short walk brought them to the wretched hovel that was the poor turf-cutter's only home; and while the latter was emptying his baskets, the stranger's keen eyes were noting the miserable and poverty-stricken look of the whole place. A few kind words spoken as they started again went straight to the poor peasant's overburdened heart, and the whole story of his grief came out.

Some years before, he had bought at a high

price, from a rich neighbor, a small patch of ground, that had proved to be worth hardly anything at all. Moreover, not being able to make up the full purchase-money at the time, he had got into debt; and the debt kept growing larger and larger, from the high rate of interest charged upon it, till he was almost driven to despair.

"It doesn't seem fair, does it?" he concluded; "but what can I do? He's rich, and I'm poor and friendless."

"Can such things be done in Russia?" muttered the officer, in a voice like the roll of distant thunder. "It is, indeed, time for a change!"

His great black eyes lighted up, as he spoke, with a flash of such terrible anger that the peasant shrank back in dismay. But the young man cooled again instantly, and asked as quietly as ever:

"Why don't you complain to the Czar?"

"The Czar?" echoed the laborer; "hasn't he changed our old Russian customs, and brought in foreigners to work for him instead of his own people? What would he care for a poor peasant?"

"It's worth trying, though," said the young man, earnestly; "for yours is really a very hard case. Come, I'll tell you what I'll do: I'm going to Volkhoff to meet the Czar and his officers, who will be there to-day, and I can get you a chance of speaking to him, for I belong to his body-guard."

"Me speak to the Czar?"

"Why not? He's only a man, like you and me. I've spoken to him myself, and I'm none the worse."

"But how shall I know him among all his officers?"

"All the rest will have their hats off, but the Czar will keep his on."

Half an hour later, just as they came in sight of Volkhoff, a group of richly dressed horsemen rode up, who the moment they saw the tall officer sprang from their horses and took off their hats.

The peasant's sun-burned face turned white as a sheet, and he glanced with a bewildered air from the officers to his tall companion, whose face wore a waggish smile.

"Well, brother," he added, "have you found out the Czar yet?"

"Well," said the peasant, staring as if his eyes would start from his head, "it must be either you or I, for all the rest have their hats off!"

"So it seems," laughed Peter the Great.

"Well, my lad, Prince Mentshikoff here will see you righted, and the rascal who cheated you punished as he deserves, and I hope you will never again think the Czar unmindful of the troubles of his people."—*David Ker, in Cosmopolitan.*

The Advent of March, 1888.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

The advent of March was heralded with a spice of various kinds of weather. It came in like a lion. The last day of February warned us of its approach by a weak and diluted shock of earthquake, but earthquake for all that. It rattled the windows and made the timid ones look big eyes at each other, and in startled tones exclaim: "What's that?" "That's an earthquake." "Did you feel it?" "Did you hear the windows rattle?" etc.

On the first day of March we saw the ragged edge of our beautiful warm California winter-spring weather depart. It was devoured by a thick bank of vapory cold that blew across the mountains from lovely sunshiny Napa valley; it came like a blizzard and doubled up our springtime warm weather in just no time. It rained, it blew, it hailed, and then we noted with a smile that while our neighbor mountains across the gap were getting white with a few shovelfuls of Montana snow, our own side was still untouched by the cruelly beautiful.

But we hadn't long to exult. Some wise head remarked, as we all huddled around our pine cord-of-wood fire, "If the business keeps up this way, we'll have a big white blanket spread over the couch of Nature by morning."

I thought them idle words, but when I looked out in the morning I hardly knew whether I had evaded my mortal coil and had "gone up higher" in the night, or whether I was in a dream; anyhow, it was beautiful enough for the realm of the immortals, and surely there dawned on my bewildered vision the delectable mountains and the plains of Beulah. Every object was covered, the erewhile naked limbs and bare twigs of the desolate trees were softly clothed with the beautiful and the immaculate; and the green and stately pines, the redwood, the fir, the manzanita, each held on their spiral needles or in the hollow of their outspread palms their surface full of feathery flakes. Even the wee flowers of the early spring nodded under the fleecy weight. But it did not long continue. While still the picture remained intact I wrapped me in warm robes and walked up the mountain to take in a full view of the rare and radiant sight; radiant indeed, now that the sun rose lordly and majestically over the mountain's brow and burnished with his golden beams the silvery splendor of the landscape. With the advent of his warm and glowing beams, down dropped the silvery mantle from the trees, melted the soft robe from the green and moist bosom of nature, and lo! it vanished noiselessly and beautifully as it came. Was it a dream?

YOUNG FOLKS' COLUMN.

Fleas.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

Far, far beyond the briny seas,
I paid my fare to see a show,
And saw some wagons drawn by fleas,
Each going fast as it could go.

Two teams were three span, three were two,
Then came a two-wheeled cart with one;
Then came, my dears, 'twixt me and you,
A spiked team—a lead-flea on.

They had no roads nor trails to take,
But passed the showman's table o'er;
Each team its crossing had to make,
Or be unharnessed never more.

The wagons tiny coaches were,
Excepting one, the buggy cart,
Drawn by a bronze-black prancing pair,
That acted well their equine part.

They labored not at eight-hour work,
Nor used their Jehus whip or goads—
These fleas their job-work could not shirk,
So humped their backs to draw their loads.

Santa Barbara.

The Brown House on the Hill.

[Written for the RURAL PRESS by A LITTLE GIRL.]

In a little brown house, situated on a hill,
lived a lady and her five daughters. Mrs. Linton, for that was the lady's name, went out sewing by the day. Clare and Eva, being the two eldest, staid at home to take care of the house. Aileen was 16, and she was governess at Mr. Benton's, a wealthy gentleman living near them. Emma, aged 12, and Nell, the smallest, went to school.

Mr. Linton, as I have not yet stated, was in the war, but they were expecting him home for Christmas, and they hoped that he would not have to leave them again, and they were all expectant for him to return.

It is now September, and they are all very anxious for Christmas to come, as we will see by the conversation going on in the kitchen.

Clare is standing near the sink, her sleeves rolled up to her elbows, while Eva is wiping the dishes.

"Oh! I do hope father can come home and bring Aunt Nan and little Gladys to spend Christmas with us. And oh, what a jolly time we will have then!" said Eva, as she let one of the plates fall and broke it.

After the pieces were picked up, Emma and Nell came running in to tell about a runaway that had just occurred down the road. "Oh! there was the littlest girl and a pretty lady thrown out that you ever saw," said little Nell, shaking her head, "and some men picked them up and took them into Mrs. Kipley's house."

None of the girls had ever seen Aunt Nan but Aileen, who was not at home; but just as they were all talking, Aileen came in. Emma and Nell immediately started in to tell her of it, but before they had finished their mother came in. The girls were sure by the expression on her face that she had good news to tell them, as, indeed, she had. She said it was a letter from father, saying that Aunt Nan and Gladys, her six-year-old little girl, were coming to spend Christmas with them, and that he would be home in a few days.

The story of the runaway was repeated. It was found out that the lady and little girl were no others than their Aunt Nan and cousin Gladys. They were not seriously injured, and were able to be around in a few days, and you may know that it was a very Merry Christmas they all spent.

Sebastopol.

A Visit to the Blind Children.

I want to tell the children of a visit I once made to the deaf and dumb and blind asylum, and of a few of the things I saw there. Perhaps these less fortunate children can teach us a lesson. The asylum is situated in Berkeley, facing the beautiful San Francisco bay; and here all the deaf and dumb and blind children in the State may be sent, and be taught the same things that you are learning every day at school. As we came up the broad walk leading to the girls' building, we saw some of the children at play. Such bright, happy faces; but what a silent play-ground! No shouting or talking, but the bright eyes were watching and the nimble fingers were busy making signs which we could not understand, but which to the children seemed quite intelligible. One dear little boy was hopping about on crutches, having lost a leg, and I saw that he was also deaf and dumb; yet he seemed happier than some little boys who have the use of ears, tongue and limbs. We ascended the steps of the large three-story brick building, were met at the door by the girls' matron, who, after learning our business, conducted us to the blind girls' schoolroom. Here several older girls were busy mending stockings—one of their regular duties. In an adjoining room one of the girls was taking a music lesson. We heard one little girl reading her geography lesson. What a blind girl reading! Yes, but instead of the black letters which you look at, her book contained white letters raised above the surface of

the paper, and she felt along the lines and read with her fingers. Her slate was also different from yours. She had little blocks, with raised signs on them, and these she set up in a frame as quickly and correctly as you could put the figures on your slate.

We now went upstairs into the dormitories. Here each girl had a little room partitioned off, containing a bed, a bureau and a chair. The beds were all neatly made, the bureaus without a speck of dust—nothing out of place; and these rooms are kept in order by the girls themselves. I think many girls might learn a lesson of neatness from the blind girls at Berkeley. We passed downstairs and across the yard to the dining hall. As it was almost supper-time, we waited to see the children march in, and here they come with clean faces and neatly brushed hair. The blind boys and girls occupy one long table, the deaf and dumb children occupy two others. Each child has a stool, and when all are in their places, they face the center of the room, where a teacher stands. The bright eyes are watching as, with his fingers, he asks God's blessing; then, at a given sign, each child turns to the table, and ample justice is done to the food before them.

I could tell you many more interesting things about these children, but my space is limited. Should you ever visit San Francisco, ask your friends to take you to Berkeley to see these children, and I know you will enjoy the visit very much. But if you cannot go to see them, you can think about them, and about your own favorable surroundings. You can say: "Not more than others I deserve, yet God has given me more." You can lift your hearts in gratitude to Him who has given you eyes to see and ears to hear, and you can use those eyes and ears and tongues for Him who has done so much for you.—*M. F. R.*

From One of the Boys.

[Written for the RURAL PRESS by E. DE L.]

EDITORS PRESS:—My father takes your paper and so I thought I would write for the young folks. I have never written to a paper before.

I don't think Aunt Susie's piece is very nice. She wants the boys to tack leather on her piece boxes and then call them names.

I used to live in Minnesota. I lived there 12 years. It is 58 below zero there now and snow two feet deep on a level.

My father brought some Pekin duck eggs from Minnesota, and they are some of the biggest that I have ever seen in the State of California. We used to raise poultry in Minnesota. I used to feed the young chickens. We raise fruit here, and my father has about 100 genuine White Smyrna fig trees just coming into bearing; he has also about 400 cuttings.

Newcastle.

DOMESTIC ECONOMY.

Something About Beans.

[Written for the RURAL PRESS by N. E.]

There is probably no other time of year when anything about beans would receive so much attention as now, when the scarcity of the more delicate vegetables makes this old and well-tried friend of the human family a frequent dish on most of our tables. Few of us know more about them than that they are much appreciated, both from a dietetic standpoint and from considerations of economy. Like the poor, this esculent is always with us in some form or other during the entire circle of the seasons, and is susceptible of various modes of preparation in the hands of the intelligent cook. We can trace the history of the bean to Egypt. As far back as the days of the Pharaohs, we find frequent mention of them. The variety cultivated by the Egyptians was the *vicia faba*, sometimes designated the horse bean or coffee bean in this country. Most of our common field beans are varieties of another species, the *phaseolus vulgaris*, which are of Eastern origin, and their appearance in history dates from the time when Alexander the Great, forcing his way to that quarter of the globe, saw them growing in a field in India and ordered them to be served for the royal repast. So much did he enjoy their flavor that he secured some of the seed and introduced the new article of food into his own country. A lover of the bean may well declare that in this act he accomplished a more lasting benefit to mankind than the aggregate of all his victories.

In spite of the extreme commonplaceness of the garden bean in our day, it was not without its romance in times past. The Roman consecrated it to the dead, while the Buddhist refused to eat them from the superstition that in doing so he was in danger of devouring some departed friend. Hippocrates had serious misgivings for the welfare of his patients during the blossoming period of the beanvines, and there was a day when no Roman or Grecian epicure considered his table complete without this vegetable. The celebrated Roman family of the Fabii are said to have derived their name from this plant. On the "Dreikonistag," or "Twelfth Night," of the Germans for generations past, a cake has been baked having a bean concealed inside, and the member of the company to whom it falls in the distribution of pieces is "Bean King" during the ensuing year. Nor is this dignity without its penalty,

for to the King falls the duty of providing next year's entertainment on "Twelfth Night." In Scotland, the bean-fields, with their acres of white and scarlet blossoms, filling the air with the most delicious perfume, are gracefully alluded to by Burns:

"The zephyr wanted round the bean,
And bore its fragrant sweets along."

But by no nation, old or new, is this most prolific of all the pulse family so highly esteemed as by the Mexican. The haricot or American garden bean is a national dish with them. It is from this people that the native and Spanish population of California derived their equal appreciation of the *frijole*. Several varieties are used by them, the most common of which is a brownish-red or small black bean. Seasoned with their favorite capsicum, with the addition of a *soupcon* of onion and a little lard, they are usually eaten with the tortilla, which is but another and more digestible mode, we fancy, of serving corn and beans than the traditional "pork and beans" and johnny-cake of the Americans.

Such heaps of shining seeds are threshed out in the fall on every *rancheria* and carefully stowed away for winter use under the swinging strings of bright red peppers pendent from the low-tiled roofs. Nor is the thrifty American farmer slow to discover the substantial and economic qualities of beans as an article of diet for the ubiquitous "hired man" whose appetite is proverbial.

In China they are also employed by the laboring classes, and are often eaten uncooked after allowing the seeds to germinate until quite sweet. In France and Germany the bean is highly valued for table use, but in England it has fallen into disfavor, probably because of the poor varieties cultivated there. The "Scarlet Runner," a really gorgeous-looking vine with its rich red flowers, is the best liked of the English species and is usually used as snap-beans, the pod being especially sweet and tender. Their roots are perennial, and if kept warm and dry during the winter they will come into bearing much earlier in the spring than if raised from the seed.

Though many varieties of the bean do well in California, our people generally prefer the wax bean, Early Valentine and Lima, when green, for summer use, and the latter when dried exceeds even the haricot and pea-bean as a favorite in the winter season. Our State is particularly fortunate in its abundant crops of Lima beans, which can always be had retail at from three to four cents a pound, while in New York they are thought cheap when they can be bought for 30 cents a quart. This most delicately flavored of all this family of esculents is used more extensively by our city population than any other variety. They are said to produce less flatulence than other beans, so are not as trying to weak digestions. Beans possess nearly the same proportion of ultimate chemical constituents as the cereal grains, and no other vegetable so nearly supplies the place of animal food. They are peculiarly adapted to the diet of those who exercise vigorously, being too nutritious to be largely employed by people of sedentary habits. Proper cooking, however, will render them easier of digestion. The boiling with corned beef or with pork, and especially the baking with the latter, renders them difficult to manage by weak stomachs.

Beans should be cooked in the water in which they are soaked. It is a mistake to drain them several times of their juices. Such a process is enough to rob anything of its sweetness and flavor. They should be thoroughly done but not boiled to pieces, and seasoned with butter, salt and pepper to the taste. It may not be out of place to give several recipes for their cooking, for where is the housekeeper that is not eternally revivifying the question in her mind, "What shall I get for dinner?"

Take two cups of Lima beans, wash thoroughly and put to soak in warm water several hours before dinner-time. Allow them an hour's gentle cooking, being careful to use no more water than is needed. Put in your tureen a cup of sweet cream, a lump of butter, some salt and pepper, and dip therein your hot beans. Stir them carefully without mashing, and let them go immediately to the table.

A winter succotash is very nice made with Lima beans cooked as above described, and adding thereto canned corn, with milk, butter and salt for seasoning.

A soup made of these same beans is an appetizing dish for these chilly days. When cooked the water should be drained off into another saucepan, the beans mashed and passed through a colander and returned to the broth. A pint of sweet cream, butter, salt and pepper are then added and the soup allowed to come to a boil before serving.

To bake beans without pork they can be dipped into a pan when nearly done, seasoned with cream, salt and pepper, and baked in a slow oven for an hour. The pea bean is the best for this purpose. A favorite method with New Englanders is to use a little molasses instead of pork, about two spoonfuls to one quart of beans.

A dish called the "macedoine of beans" is much relished by some epicurean tastes. Put in a stewpan one pint of stewed tomatoes, a spoonful of finely minced onion, a dash of capsicum, butter and salt to the taste, and add thereto a pint of boiled haricots, a half-dozen boiled potatoes chopped fine, and pour all into a nappy and bake one hour; serve hot. This is not very unlike the Spanish *frijole*, and few of us Californians but prefer the latter dish.

The Week.

Perfect days have followed the rain storm and the utmost activity is discernible everywhere in the country. It has proved an exceptionally late season and orchard and vineyard work has kept step with the dilatory pace of nature. The result is a great rush to finish up pruning and plowing and even planting, for, though it is late for most parts, the trees are still being set.

Grass and grain are now starting forward nicely, but the growth is short so far. The hills and vales are carpeted with verdure, and the landscape is a round of beauty whithersoever the gazer turns his eyes. It is too early to judge much of the outlook for crops in general, but, though some fruits in some localities do not seem to be shaping right for large yields, the average promises to be a good one.

The weather sensation of the week is on the Atlantic seaboard, for a blizzard of the most pronounced Dakota type has visited the great cities of the East. Travel and communication have been so interrupted that even in New York City business was well-nigh abandoned.

People were even unable to get to and from their homes, and in the heart of the city a man was frozen to death in a snow-drift and a woman in a hallway. Oh winter, how merciless thou art! Happy are they who know thee only by mail or telegraph!

The Tariff Again.

The turn of the tariff kaleidoscope brings to view the bill introduced by Mr. Randall of Pennsylvania which opposes the bill of Mills, and the Ways and Means Committee to which we alluded last week. It proposes to reduce revenue and thus get rid of the troublesome surplus at the same rate per year as the Mills bill, by a reduction of about \$75,000,000 per year, but, while Mills makes a reduction of \$50,000,000 in export duties and \$25,000,000 in revenue taxes, the Randall measure takes \$25,000,000 off export duties and \$50,000,000 off revenue taxes. On the faces of the two measures Mills is two-thirds in favor of the foreign producer; Randall is two thirds in favor of the home producer; of course, there are other considerations involved, but this is merely the general numerical apportionment of the reduction in national income which each proposes.

The Randall bill is the measure which will commend itself to most California producers. The three great lines which have had most to say upon the tariff question in this State are, 1st, the producers of fruit and fruit products; 2d, the producers of wool; 3d, the producers of lumber.

We will first collect the statements which have been telegraphed concerning the provisions of the Randall bill as to fruit and fruit products, as compared with the provisions of the Mills measure.

Zante currants are placed upon the free lists in both the Randall and Mills bills. Mr. Randall fixes a specific duty of one cent per pound upon grapes instead of the 20 per cent ad valorem they now pay. The rates on dates, prunes, plums, figs and raisins are maintained at the existing rates by Randall, while they are largely reduced in Mills' bill. Limes, lemons and oranges are protected in Randall's bill at the existing rates, as are also preserved fruits. Mr. Randall's bill further provides that there shall be no allowance made for damaged goods, but the importer is given the privilege of surrendering to the Government all or any portion of his merchandise and escaping the payment of the duties upon such abandoned wares, provided that the portion so abandoned shall amount to 10 per cent or over of the total value of his invoice.

Randall's bill reduces the duty on almonds not shelled from 5 to 4 cents per pound, and on shelled almonds from 7½ to 6 cents per pound.

The duty on filberts and walnuts is reduced from 3 to 2 cents per pound. The rate is reduced on peanuts in the shell from 1 cent to three-quarters of a cent per pound, and on shelled peanuts the present rate of 1½ cents per pound is retained.

The wine schedule is the same as in the existing law with a provision that there shall be no constructive allowance for breakage, leakage, or damage on wines, liquors, cordials, or distilled spirits.

The duty on nut oil is fixed at 12 cents per gallon, it now being 25 per cent ad valorem. The duty on olive oil is made 35 per cent ad valorem; it is now 25 per cent.

The sugar schedule is not disturbed and beet-sugar seeds are retained on the free list.

The rates on wool are, if anything, increased by Randall's bill. The classification of wool is admirable, and the rates have been adjusted, so far as possible, to give equal protection to growers and manufacturers. Mills' bill proposed free raw wool. Randall keeps the duty on raw wool about where it is to-day.

Mr. Randall adopted the revised schedule on wool and woollens framed by the convention of growers and manufacturers which recently assembled in Washington, and it is this schedule which growers are asked to solicit in the formal petition to which allusion is made on another page of this issue.

The third division of Pacific Coast products which is striving for recognition at Washington is our lumber interest. Logs and lumber not further manufactured than hewn, squared or sided, last-blocks, wagon-blocks, gun-blocks, and all like blocks or sticks of wood rough hewn or squared only, are put upon the free list by Mr. Randall. This is as far as he goes in the direction of free lumber. Mills, on the other hand, puts all lumber, manufactured as well as unmanufactured, on the free list. Against this feature of the Mills bill, most strenuous effort is now being made by our producers. A long petition for a special hearing by the Ways and Means Committee was telegraphed to Washing-

ton on Tuesday of this week, and is being pushed by Mr. Morrow with the approval, it is believed, of the whole Pacific Coast delegation. One paragraph of this petition says: "The Mills Tariff bill gives to foreigners without cost the markets which our own people have created and our own people are able to supply, to the utter destruction on this coast of the American interests in lumber and coal, and especially in shipping."

There has been some interest among our fruitmen as to how the whole delegation stood, as the letters written in reply to the memorial adopted by the Horticultural Society did not draw forth any expression from some of them. It was telegraphed to the *Chronicle* on Wednesday morning as follows:

Representative Mills of Texas is endeavoring to win votes for his tariff measure. It is stated that he has offered certain concessions to the two California Democrats in the House if they would pledge their votes for his bill. Representative Biggs stated to Mills that if fruit and raisins were put back where they now stand he would take the chance of striking out the clause relative to wool on the floor of the House and would support the bill whether the wool clause was stricken out or retained. It is possible that Mills will endeavor to make some concessions to Thompson and Biggs if they will pledge their votes for the bill.

This may be only reporters' rumors, but it is satisfying to know that these members are on the right side as to local interests. This may have been known to their constituents, but we have seen no public statement of the fact.

It is reported that Congressmen are anxious to begin debate on these tariff measures, so as to get to a vote by the middle of May before the assembling of one of the national political conventions. One side wishes this; the other does not. It is possible that we shall see some of the grandest filibustering which ever graced the halls of Congress. This is about the measure of the whole business in the mind of the average politician, and it is rather more than likely that this is about all that will come out of the great sensations which are unsettling the industries of the country.

Real Estate Swindlers.

In our issue of January 21st we spoke briefly of the case of Francis M. Parker, the old farmer from Oregon whom two smooth sharpers, Pilcher and Hamberg by name, had befooled into giving all his spare cash and his home ranch up north for a sham deed of a piece of real estate in this city to which they had no title whatever.

The outrage was legally aggravated by the fact that when the scoundrels who had robbed the confiding rancher were arrested for their crime, they were allowed to bail themselves out (with the self-same money of which they had defrauded Parker), while their victim was clapped into prison to insure his presence as a witness against them should they ever be brought to trial.

It is a cheering sign of the times, however, that these rascally conspirators—in spite of the efforts of unscrupulous lawyers, who endeavored to prevent their being brought to justice—were found "guilty as charged," on Tuesday, within five minutes after the case was given to the jury, were remanded to the keeping of the sheriff, were taken back to the County Jail, and are to be brought into court for sentence this day, Saturday. It is hoped that Judge Toohy will inflict upon them the severest penalty the law allows, which unfortunately is but \$1000 fine and a year's imprisonment—a punishment quite inadequate to their deserts, who take advantage of the simple, honest, trusting stranger, to strip and plunder him without mercy. We hope this conviction will have a wholesome influence upon such moral sneak-thieves, restraining where it cannot reform.

A species of fraud but little less heartless has been practiced upon immigrants and home-seekers in some portions of this State. Unprincipled persons, professing to be real estate dealers or land-office agents, by the aid of deceptive maps and misrepresentations as to the character of the land, get people's money for locating them on wild mountain-sides or barren desert. In some cases they have been known to take parties out and show them good, even improved land, and then come back and deed them another piece that is good for nothing, but which their dupes believe to be the same they have been inspecting.

As these lines may meet the eye of some in-

tending settler or purchaser, we will say to such: Satisfy yourself that those who would have you deal with them are reliable, or else refrain from dealing with them. Before you buy, go on the land yourself and see it with your own eyes; then, if you like it, be sure that what you buy is the same that was shown you. And whatever else you do, refuse to sign any paper "merely as a matter of form," without scrutinizing and understanding its contents.

The American Hog Abroad.

The American hog has cut quite a figure abroad since his fall from favor about eight years ago, but all the resources of our Washington diplomats do not seem potent enough to reinstate him in favor on the continent. The State Department declares that the French Government does not give sufficient reason for admitting the hogs of all countries but excluding the American, and yet they will not reconsider their exclusion nor give any reason to think they ever will. It will not be worth while to discuss now whether he is excluded on his own merits or demerits in the shape of alleged trichinae or whether he is pounced upon as a retaliation for our import duties on certain French goods. The item of special interest now is that our hog is denied by our own law-makers the opportunity to vindicate himself as the best hog in the world, though he hoped by such a course to win a smile from the French gourmands. The record runs in this wise:

The French are to have a grand exposition in 1889, and have invited all nations to participate. Our House of Representatives thought favorably of the project, but could not forget the insult placed upon the American hog, and so they passed a joint resolution accepting the French invitation and directing the Commissioner of Agriculture to secure, if possible, as part of the exposition, a competitive inspection of pork products of the United States and Europe. They also authorized the commissioner to prepare for gratuitous distribution at the exposition a statement printed in English, French and German, descriptive of swine-raising in the United States, together with such information as he may possess as to the relative wholesomeness of pork raised in this and other countries.

Though the American hog had become somewhat tired of the kind of notoriety he was getting, he must have rejoiced at this opportunity of showing his quality to the world and of having his biography written in half a dozen languages. But he was doomed to disappointment, for when this joint resolution came into the Senate they unceremoniously fired the hog out of the display entirely and adopted the resolution of acceptance without mention of him. Whether they did not think it good taste to eulogize their own contribution to the picnic or whether they thought the hog would get there all the same, we are not informed. As it now stands, the hog may go as a private interest, but not as a national issue, so to speak. We hope, however, that the friends of American pork will take the hint and make a display of hot roasters, sausage, broiled ham and bacon that will fill the vast pavilion with savory aromas, and if the world can escape such an appeal we shall be mistaken. It will accomplish more than diplomacy or hog literature in all the romance languages.

Imported Fruits.

The New York importers of fruits, to show the importance of their business and how much they would be benefited by putting all these fruits on the free list, advance statistics which are of interest out here, but not in the way contemplated in their preparation. The following is their statement of imports of oranges and lemons in boxes and cases from the Mediterranean alone, simply stating that West India fruit, packed in barrels, forms a very large item, extending into hundreds of thousands of barrels per year. The item of grapes is also extending into hundreds of thousands of barrels per year:

1856-57 were: Oranges, boxes, 447,136; lemons, boxes, 238,297.
1866-67 were: Oranges, boxes, 692,259; lemons, boxes, 337,441.
1876-77 were: Oranges, boxes, 893,820; lemons, boxes, 612,463.
1886-87 were: Oranges, boxes, 1,711,644; lemons, boxes, 2,281,087.
The imports of cases of Valencia oranges for the season of 1884-85 were 388,242. The duties on the imports on boxed fruit alone amounted to the sum of \$1,112,237 for the season of 1886-87.

The Emperor of Germany.

Last year was made memorable in the annals of sovereignty as the jubilee year of Queen Victoria, who had reached the half-century anniversary of her accession to the throne, a longer reign than is usually allotted to crowned heads in this world of accidents to monarchs. Not less remarkable is the reign of Emperor Wilhelm. Among all his contemporaries and along the whole line of his predecessors no ruler has reached such an advanced age. He was born March 21, 1797, came to the throne an old man of 64 years, and reigned 27 years.

His career has been a remarkable one. He was born on the very day on which the young Napoleon left Paris to take command of the army in Italy. He was cradled in the camp of national adversity, for he was a child when the battle of Jena was fought and Prussia overthrown. He learned the trade of war in the school of arms established under successive European coalitions against France. He served with the victorious army of 1814 which marched from Leipsic to Paris, and he was in the battle of Waterloo that banished the crowned terror of Europe to St. Helena.

In all Germany, England and France there could now scarcely be mustered a corporal's guard of the veterans of the Napoleonic campaigns, and one of them, after a long and eventful reign, has just been gathered to his fathers.

From Waterloo to King William's coronation at Koenigsberg in 1861 there was a transition period of nearly half a century, during which Prussia remained a feeble, misgoverned State, greatly overshadowed by Austria. A soldier without congenial occupation, a prince of marked unpopularity, he came in old age to the throne to take up almost at once the sword of Frederick the Great, and by striking down two rival States to make Germany under Prussian leadership the strongest power on the continent. The Empire to-day is more powerful than it was in the days of Charles the Fifth. He has rendered services to the Fatherland which have combined with many homely virtues and sterling qualities to command the confidence and love of his subjects. He was honored throughout Germany for his genuine patriotism. The shortcomings of his domestic policy were recognized as faults of the head rather than of the heart. Always a thorough soldier, he has been at the head of his armies in every campaign, and if he has kept Germany in the saddle and set a pernicious example in national armaments, it has been because he believed that what had been won in the battles of his reign must be protected by standing armies for generations to come. Since Sedan he has not made the Empire troublesome on the continent. It has rather been an agency of pacific diplomacy.

The Emperor's greatest faculty as a sovereign was his sagacity in the choice of advisers. No monarch since Napoleon has displayed equal judgment and acumen in the selection of ministers and generals. Bismarck was called to his side soon after his reign opened, and was kept there as a mighty and jealous defender of the rights of the Crown, which the Emperor himself accepted as of divine appointment, and as taken, in his own words, "from the table of the Lord." Von Moltke was placed in supreme command over his armies as the ablest general of the times. As a soldier, he looked to the army as the main instrument of the greatness of the Empire and of the maintenance of peace. He had little, if any, sympathy with liberal ideas. He did not make parliamentary government a reality in Germany, nor convert the democracy he had armed with the ballot into a progressive force.

From the time he became King of Prussia he had a well-defined policy to which he inflexibly adhered, and that was the fusion of the German people into a great empire. This was a work of great magnitude, because what is now the German Empire was then divided into a number of small States which were practically independent and ruled by parties hostile to the policy that would deprive them of power. To this end William called around him some of the ablest men in Europe. Every move that was made was made cautiously, with a view of arousing in the German people the spirit of nationality. The Prussian army was made the best in Europe. Step by step his great purpose was carried out. The defeat of Austria in

Emperor

King of Prussia

1866 made the plan possible, but the overthrow of France in 1871 rendered it inevitable, and the King of Prussia became the Emperor of Germany. The credit of this great work has been largely accorded to Bismarck and Moltke,

but the conception was that of the Emperor William, and he showed his greatness in the selection of the subordinates who could carry out his grand ideas. When the history of Germany for this great period is written, the

Emperor William will be given a place as the equal of his great minister and general, and in the front rank of the great rulers in which his illustrious progenitor, Frederick the Great, stood at the head. He possessed eminently a judicial mind, and in any age would have attained distinction. He was steady, calm, and energetic. His will was indomitable. When a difference arose between his ministers, it was always the Emperor's judgment that decided. During the intense excitement and activity of the French campaign this decisive quality of his nature was repeatedly called into exercise. In the most important emergencies all advisers fell back on the judgment of the Emperor.

In his domestic relations, the Emperor has a record that is nearly isolated among the royal families of Europe. No shadow of a stain rests on the purity of his character. He was a loyal and devoted husband, a firm, gentle, loving father. No Puritan parent could point to his exemplary life with prouder assurance than this great potentate.

In personal appearance he was tall and dignified, and pleasing in address. At the age of 91 he retained all his faculties nearly intact. His carriage was erect, his eyesight undimmed, and up to a few hours before his death he attended to public affairs with usual regularity.

In spite of the growing sentiment of popular government, the venerable Emperor retained the admiration and love of the German people to a most remarkable degree. Other nations held him in high esteem as a great and good man, who had labored to improve the condition of the people, and who ever displayed the highest spirit of patriotism. The civilized world unites in paying the last tribute of honor to the man who, as a soldier, statesman, King and Emperor, had but one great object in view—the nationalizing of the German people in Europe. Even the French people, who have the least reason for kindly remembering the dead Emperor, have reflected great credit upon themselves by the dignity with which they received the news of his death, and the chivalrous feeling of satisfaction they have evinced on seeing the Crown Prince ascend the throne, whose heroic sufferings have made him an object of pathetic interest, even to his adversaries.

The Germans in this city, while thoroughly in accord with our democratic institutions, have resolved to commemorate the deeds and death of Emperor William on the day of his burial. The Grand Opera-house has been secured and there will be orations, music and fitting decorations. The Governor of the State, the Mayor of the city, General Howard and staff and all foreign consuls will be invited.

We give portraits of the late Emperor, and of Frederick III, present Emperor of Germany, his oldest son. The latter was born Oct. 18, 1831, and in 1858 married the eldest daughter of Queen Victoria. He entered military service in early life, bore an important part in the Austro-Prussian war of 1866, in which he commanded the second army, numbering some 125,000 men. During the Franco-Prussian war he led the third army of about 200,000 men and 500 guns; won the victories of Weissenberg and Worth and bore a distinguished part in the succeeding events of that war. His son, now Crown Prince of Germany, is 27 years of age.

Peculiar and mournful interest pertains to the accession of the present Emperor from the fact that he is suffering from a serious throat disease, from which a few days ago it was thought he could not recover. He now seems to be gaining strength and assumes the reins of Government with the most sincere hopes of his people for his full recovery.

THE POLLED ANGUS SALE.—The sale of Polled Angus cattle on the 7th inst. was not so largely attended as the importance of the sale would have warranted. The sale was, however, quite a success, and both seller and purchasers are satisfied with prices paid and obtained. Among those who bought largely were Frank H. Burke, F. D. Atherton, L. C. Frisbie, J. B. Smith, J. E. Camp, A. J. Johnson and S. N. Straube. We are assured by Mr. Mathews that the prices paid (23 head brought \$7122, or an average of \$309 per head) are less than heretofore obtained for such stock. It is the intention of the majority of those who purchased to breed thoroughbred Polled Angus cattle for sale. With a favorable climate, healthful ranges and rich grasses, all that is needed to assure success is intelligent management.

EDUCATIONAL.

National Educational Association.

The following address, which tells its own story, was issued on the 9th instant:

To the People of the State of California, GREETING: By your invitation, as expressed in a joint resolution unanimously passed by your Legislature at its last session; by invitation of the California State Teachers' Association, unanimously extended at the session of 1887; upon the unanimous invitation of the Boards of Education of San Francisco, Oakland and other cities; through the personal efforts of special delegates from California to the meeting at Topeka, Kansas, in 1886, and to that at Chicago in 1887; and, finally, relying upon the guarantees as to local arrangements and conditions given in writing on behalf of San Francisco by a committee of citizens, with Mayor Pond as Chairman, and upon guarantees as to rates of transportation given by the great transcontinental railroad lines, the National Educational Association of the United States will hold its 31st annual session at San Francisco, July 17 to 20, 1888.

The Association What It Is.

Over 30 years ago, a few earnest, thoughtful, devoted men in New England banded themselves together for the purpose which is still expressed to-day in the preamble to the Constitution, viz.: "To elevate the character and advance the interests of the profession of teaching, and to promote the cause of popular education in the United States."

Because its aim was noble, its purpose high, its administration in the hands of disinterested and devoted men, and its influence always for good, it prospered and grew in numbers, power and influence, until now great cities and States compete for the honor of its annual meetings.

It is incorporated under the laws of the District of Columbia.

It consists of a National Council of Education and nine departments, as follows: 1. A Department of School Superintendence. 2. Of Higher Education. 3. Of Secondary Schools. 4. Of Elementary Schools. 5. Of Kindergarten Instruction. 6. Of Normal Schools. 7. Of Industrial Education. 8. Of Art Education. 9. Of Music Education.

Membership.

"Any person in any way connected with the work of education shall be eligible to membership. Such person may become a member by paying \$2 and signing the Constitution." At the meeting in Chicago, last July, there were enrolled over 12,500 annual members, as shown by the secretary's receipt stubs for membership fees.

The \$2 membership fee secures to each member, in addition to the rights and privileges of membership at the meeting, a bound copy of the proceedings and all the papers read in general and department meetings, expressage prepaid. That of the Chicago meeting is a bound volume of over 850 pages—quite an educational library in itself. It contains the best expression of the best thoughts of some of the brightest and best men in the country.

Officers.

The officers of the General Association are a president, secretary, and treasurer; 12 vice-presidents, one director from each State, district, and Territory represented in the association, and a board of trustees.

In addition, each department has its own officers, consisting of a president, vice-president and secretary.

Difficulties.

Owing to the fact that it was not to the interest of the great and powerful railroad combinations east of Chicago that the association should come to California, it was not until the end of October that, through the presence in the East of Messrs. Goodman and Stubbs of the Southern Pacific railroad, and their persistent personal efforts, the last remaining obstacle in the transportation matter was removed. On the 11th of November the National Committee met at Lawrence, Kansas, and officially designated and announced the time and place of meeting to be July 17th to 20th at San Francisco.

Local Preparations.

At the same time and place there was also appointed a Local Executive Committee for California, consisting of eight persons, empowered to make all necessary local arrangements for the meeting, appoint sub-committees, etc.

This committee immediately met and organized, and has since held regular meetings every Saturday evening. Sub-committees have been appointed as follows:

(1) Finance, (2) Auditing, (3) Reception, (4) on Hotels and Accommodations, (5) on Public Halls and Places of Meeting, (6) on Official Bulletin, (7) Transportation, (8) Excursions, (9) Press, (10) on Exhibits, (11) Badges, (12) on Headquarters, and to co-operate with the National Department officers, (13) on Superintendence, (14) on Higher Education, (15) on Secondary Schools, (16) on Elementary Schools, (17) on Normal Schools, (18) on Kindergarten Instruction, (19) on Industrial Education, (20) on Art Education, (21) on Music Education.

These committees are all actively at work.

Commodious headquarters have been leased till the 1st of August, and well fitted up, in the new Flood building, corner of Fourth and Market streets. A secretary and one assistant are here regularly employed; here the various committees have desks and hold their meetings, and, in short, all business is here transacted. For the educational exhibit the Pavilion has been leased; a cash prize of \$500 and a parchment diploma has been offered for the best State exhibit outside of California; and, in addition to the educational exhibit, the various counties of this State, through their supervisors and boards of trade, have been invited by the Exposition Committee to make, with no charge for space, an exhibit of their production.

For the general meetings of the association, mornings and evenings, the Grand Opera-house has been leased, and for the department meetings there have been leased Metropolitan Temple, Odd Fellows' hall, Pioneer hall, B'nai B'rith hall, Y. M. C. A. hall, Union Square hall and Saratoga hall. For the exclusive use of the Reception Committee, the Committee on Hotels and Accommodations, and the Registration Committee, the gentlemen's large reception-room on the ground floor of the Palace hotel has been leased from the 9th to the 20th of July.

In accordance with the promise given by your delegation at the Chicago meeting, 100,000 copies of a Bulletin of information will be issued and mailed free to leading educational people all over the United States. It will go to press early in March. It will contain 32 pages, the print on each page being 6½ by 9 inches. It will be bound with a cover lithographed in four colors. The work of obtaining corrected lists of addresses of prominent educators all over the United States, through State, Territorial and local superintendents, and the writing of wrappers, has been going on actively and steadily for several weeks. It will require to make this Bulletin eight tons of paper, and its total cost, including wrapping, addressing, and postage, will be about \$6000. The committee will meet this from the pages devoted to advertisements, nearly all of which have been already taken.

The Excursion Committee has arranged excursions around the bay, and, at greatly reduced rates, to all points of interest in this and adjoining States, and to Alaska and the Sandwich Islands.

The Music Committee is arranging the program for a monster concert, with a chorus of 500 trained voices and an orchestra of 75 picked musicians, in connection with the exercises of the first, or welcoming, night at the Pavilion. The cost of this will be about \$2000.

Estimated Attendance.

The California delegation at Chicago pledged to the association, if it would come to California, a local membership from this coast of 2000. The honor of the profession here and of all connected with it is involved in the redemption of this pledge.

What the actual attendance from east of the Rockies will be, can, at this time, of course be merely a matter of conjecture and estimation. All the conditions, influences, and indications are favorable, and give assurances of a very large attendance. The most careful and conservative calculations place the number at from 5000 to 7000; and from these the figures vary from 7000 to 10,000. Among the favorable conditions and data are:

1. The meeting comes in the early part of the time devoted all over the country to the long summer vacation.
2. There is an army of over 312,000 public school teachers in this country who will be enjoying this furlough, besides those engaged in private schools, colleges, and universities.
3. The low fares. A round-trip ticket for one fare, first-class accommodations, Pullman palace cars, stop-over privileges both ways, choice of routes returning, and tickets good for 90 days.
4. The general desire of people, everywhere, to visit California.
5. The visits here of the Knights Templar and the Grand Army of the Republic.
6. California's renown as a royal hostess.
7. The sharp competition of railroad lines East, and the widespread advertising by them of the meeting.
8. The reports from the National officers and the State directors—the excursions which are organizing all over the country, the inquiries for accommodations, which even at this early day are pouring in upon the Committee on Hotels and Accommodations—the articles in the educational journals of the country, and the action had by educational bodies in the various States, all indicate a veritable national enthusiasm.
9. The gallant fight just made in Washington to bring here one of the great national party conventions will aid us, as having freshly and widely advertised our resources for accommodating guests by tens of thousands.

Expenses.

The great labor involved in all this detail of preparation is a labor of love on the part of those to whose hands it comes; the stimulus being a genuine and loyal State pride that California has at last received a recognition of her educational status, to the extent of having this great educational association cross the continent to hold here its meeting of 1888.

The expenses as well as the labor will be great, if California shall at all maintain the proud name she justly bears in all the land as a hospitable and generous hostess. While all

cannot share in the labor, all can share in the burden of expense.

In due time the Finance Committee, composed of Hon. Henry L. Dodge as Chairman and 16 other prominent and responsible gentlemen of San Francisco, will afford the capitalists and business men of that city an opportunity to show their appreciation of this great meeting of the many thousands of the observing, thinking, and talking men and women from the other side of the Rockies, and the benefit to California and San Francisco to flow from it.

In the meantime, and to meet the expenses already upon the committee and constantly increasing—current expenses, rent, fuel, gas, stationery, printing, postage, expressage, telegraphing, telephone and messenger service, clerical work, etc.—each County and City Superintendent in the State has been appointed Chairman of a local Finance Committee, himself to appoint the others, from two to five, to solicit contributions within his jurisdiction, and transmit the same, as collected, to the Treasurer, James W. Anderson, Superintendent of Schools, San Francisco.

It is asked that these committees be liberally met in this call; the distinct understanding being that no further demand will at any time be made by any one, for this committee, upon the cities and counties outside of San Francisco. Let this contribution, therefore, be a liberal one, such as you are willing to have stand recorded as the ultimate measure of your appreciation and help in this direction.

(Signed)

LOCAL EXECUTIVE COMMITTEE N. E. A.
Headquarters Flood Building, S. F.

FORESTRY.

Work at the Santa Monica Station.

H. Rowland Lee, head forester at the Santa Monica Forestry Experiment Station, reports to Hon. Abbot Kinney, chairman of the State Board of Forestry, as follows:

"The month ending February 21, 1888, has been a very important and busy one in our forest work. The ground is fit for planting or transplanting, as the case may be, and 75 different varieties of valuable timber and other economic plants have been placed in seedbeds or planted out, of which I hope to give a full descriptive catalogue in the near future.

"The latter part of the month has been very dry, and while we have plenty of water on the place, we have not as yet the proper appliances, viz.: Hose and pipes, which I am about to procure, and in another week will overcome the difficulty.

"There has been considerable difficulty in obtaining help. On account of not being paid, with one or two exceptions, all hands quit work on February 1st. With these I have managed to prevent much suffering among the seedlings, without making the progress the advancing season demands. In the ensuing month I hope to have proper accommodation for good help near by, and to be better prepared for emergencies.

"Seeds are now nearly all in, many of which are up, and work for the ensuing month will be chiefly planting.

"During the month we have procured one agricultural wagon, one spring or business wagon, with single and double harness to match. These, with the plow or cultivator, will in the future obviate the weight of expenses for transport and teaming. The main seed bills for the year are also embodied in this month's report. Also items for lumber of frames and boxes and other expenses incidental to the starting of a new station, which are seldom, if ever, repeated.

"During the month I have answered numerous letters of inquiry relative to the seeds, their planting, after-culture, profit, hardiness, etc., from districts as far north as Sacramento and south as San Diego. I would suggest the preparation of a pamphlet for distribution with information on the foregoing and other essential points.

"Among the contributors to the board during the past month, the name of Adolph Sutro of San Francisco deserves special mention.

"This gentleman has donated to the board 2000 *Pinus Maritima*, 1000 of which are planted in Santa Monica and vicinity, the balance being held for testing in the Chico station, which will form a more inland and climatic test for this tree. Mr. Sutro has also invited us to make a record of the trees planted on his extensive property, which would prove very valuable for the public information. I would respectfully recommend that this proposition be accepted by your honorable body, and that a record be made this year."

AFRICAN TEAKWOOD INDESTRUCTIBLE.—The interesting fact has been stated that so indestructible by wear or decay is the African teakwood that vessels built of it have lasted 100 years, to be then only broken up on account of their poor sailing qualities from faulty models. The wood, in fact, is one of the most remarkable known on account of its very great weight, hardness and durability, its weight varying from 42 to 52 pounds per cubic foot. It works easily, but on account of the large quantity of silex contained in it the tools employed are quickly worn away. It also contains an oil which prevents spikes and other iron-work with which it may come in contact from rusting.

GOOD HEALTH.

Snow-blindness and "Boot-leg Goggles."

EDITORS PRESS:—Snow-blindness is an affliction which results from the rays of the sun being reflected from a surface of snow into the eyes. It is not only painful; it frequently results in permanent injury. The eyes continue sensitive to exposure, and the tendency to close them when looking at bright objects indicates the serious nature of snow-blindness. My experience may prove serviceable if it saves others from this misfortune, and I will briefly state the facts. While living on my ranch in Colorado one of my cows was found in an irrigating ditch, where the ditch had been cut through a ridge. This cut was partly filled with drifted snow. The storm was over, and as it was in March the sun was shining brightly. To enable the cow to get out it was necessary to shovel a path in to her and also toward the sun. The plan succeeded, and the cow was liberated, but that night my eyes felt as if red pepper had been rubbed on them. If I closed them the tears would pour out and wet my cheeks. I was so blind that I could scarcely recognize my animals by daylight; ordinary exposure to sunlight was very painful.

This state of affairs compelled me to study out a remedy. After trying several expedients to shut out the light, I adopted another plan. I cut from a boot-leg a piece of leather having two ovals to fit each eye, leaving a strip to connect them and rest on the nose. The leather was soaked in water, and then each eye-piece was hammered into an iron spoon, making them convex. When they were dry a narrow slit was cut lengthwise in each of these rounded eye-pieces, and a buckskin thong fastened at each end to allow the whole to pass over the head. This contrivance cut off the reflected rays and enabled me to look out freely when the strongest sunlight was reflected from a field of snow. The goggles fitted close without inconvenience to the eyes, and could be placed in the pocket if desired.

Afterward I saved a member of a surveying party from snow-blindness by giving him a pair of boot-leg goggles, and enabled him to go on with his work. The greatest danger from this cause is in the spring, when the sun's rays have gained intensity. As some of your readers may be interested, and most American boys can make the goggles, my experience may possibly result in their benefit.

EDWARD E. CHEVER.

San Francisco, March 1 1888

How to Treat the Eye With a Cinder in It.

R. W. St. Clair writes the *Medical Summary* as follows: "Nine persons out of ten with a cinder or any foreign substance in the eye will instantly begin to rub the eye with one hand, while hunting for their handkerchief with the other. They may, and sometimes do, remove the offending cinder; but more frequently they rub until the eye becomes inflamed, bind a handkerchief around the head, and go to bed. This is all wrong. The better way is not to rub the eye with the cinder in at all, but rub the other eye as vigorously as you like.

"A few years since I was riding on an engine. The engineer threw open the front window, and I caught a cinder that gave me the most excruciating pain. I began to rub the eye with both hands. 'Let your eye alone, and rub the other eye' (this from the engineer). 'I know you doctors think you know it all; but if you will let that eye alone and rub the other one, the cinder will be out in two minutes,' persisted the engineer. I began to rub the other eye, and soon I felt the cinder down near the inner canthus, and made ready to take it out. 'Let it alone, and keep at the well eye,' shouted the doctor pro tem. I did so for a minute longer, and, looking in a small glass he gave me, I found the offender on my cheek. Since then I have tried it many times, and have advised many others, and I have never known it to fail in one instance (unless it was as sharp as a piece of steel, or something that cut into the ball, and required an operation to remove it). Why it is so, I do not know; but that it is so, I do know, and that one may be saved much suffering if he will let the injured eye alone and rub the well eye."

THE CLOSE OF LIFE.—It is a great mistake to suppose that the usefulness of life ceases with the power of active service. When the tired hands are folded in the repose which their toil has rightly earned for them, when the weary brain is relieved from the burden of cares and perplexities which it has nobly borne, there should be a season rich in blessings and in influence which no one would willingly forego. Then should come the leisure vainly loughed for in past years, and the opportunity to attend to many things and to enjoy much that was before impossible. If the busy life has also been an honorable one, there are sweet memories, cherished friendships, the devotion of children, the respect of society, the power of helping others through the accumulated experience and intelligence of many years. The very presence of a venerable and beloved face is a blessing to those who look upon it, bringing suggestions of well-earned peace and calm to the busy toiler, and calling up emotions of tender reverence in the eager and buoyant youth.

Lands For Sale and To Let.

"CHICO VECINO,"

General John Bidwell's tract, Chico, Cal. Maps of this property are now ready, and applications received for the 5-acre tracts and town lots, 90x200 feet.

CAMPER & COSTAR, Chico, Cal.

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land?

DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?

DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10 acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES
At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. One hundred and seventy-five acres at Palermo are now being set out in the choicest varieties of Florida Orange Trees. Maps and further particulars of

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

LIVERMORE ITEMS.—*Herald*, March 8: The volunteer hay crop will undoubtedly be an immense one in this township this season. The grass is now well rooted and in two months will be ready to cut. . . . A. Duval is shipping a carload of wine from his "Bellevue" vineyard to South America, by way of New York and Colon. Messrs. Aguilon & Bustelli, of the pioneer wine-cellar of this place, have sold 80,000 gallons of one and two year white and red wine, which they are now shipping to San Francisco. It will require 40 cars of ten tons each to handle the shipment. . . . J. H. Wheeler has shipped 120,000 cuttings of the Seedless Sultan, Black Ferrara, and Flame Tokay varieties. . . . Fifty-four boxes of eggs were shipped from the Livermore depot for the S. F. market on Sunday last. The total number of eggs in 54 boxes is 19,410.

Colusa.

HORTICULTURAL SOCIETY MEETING.—*Colusa Sun*, March 10: The meeting of the Horticultural Society at the Court House, Saturday, 3d, was largely attended, showing unmistakable interest in the promotion of horticultural pursuits. The following were proposed for membership, and will be balloted on at the next regular meeting: R. Gosner, John Boggs, Geo. F. Packer, Isaac Sylvester, F. M. Putman, A. M. Newland, W. N. Herd, Noah Scoggins. The chair appointed the following committees to confer with farmers for the purpose of urging upon them the necessity of cultivating special products to be placed on exhibition at the next State Fair: Cereals—Geo. Hagar, R. Gosner, John Boggs. Corn—Geo. F. Packer, John Boggs, W. J. Tully. Peaches—J. B. De Jarnatt, H. B. Julian, Mrs. Dora Purkett. Apricots—E. A. Bridgford, L. L. Hick, F. M. Johnson. Plums and Prunes—L. F. Moulton, W. N. Herd, H. H. Hick. Almonds—A. M. Newland, J. C. Duell, J. R. Totman. Cherries—J. R. Totman. Apples—Wash. Clark, A. M. Newland, Geo. F. Packer. Pears—R. A. Gray, G. Goldring, W. N. Herd. Figs—J. C. Duell, L. L. Hick, John Deter. Raisin Grapes—J. O. Zumwalt, J. B. De Jarnatt, W. J. Clarke, E. A. Bridgford. Wine Grapes—Gustave Weyand, J. D. Rosenberg, C. C. Felts. Melons—J. Alliston, W. N. Herd, F. M. Putman. Vegetables—N. Cutler, H. H. Hick, J. Alliston. Alfalfa and Seed—A. E. Potter, C. P. Wilson, John Richey. Wool and Mohair—Peter Peterson, Julius Weyand, Thomas Harland. Ore—C. M. Polley, J. C. Bedell, Julius Weyand. Mineral Waters—Dr. Moore, Mrs. Blanck. The following motion, made by F. W. Willis and seconded by L. F. Moulton, was carried by a unanimous vote:

"Considering the fact that the bill framed by the sub-committee and presented by the chairman of committee to the full committee on Ways and Means, on March 1, 1888, is strictly antagonistic to the fruit industry of California, and therefore to Colusa county, I hereby move that a committee be appointed by the chair to draft resolutions to be forwarded to our Representative in Congress, calling his attention to the facts, as they are, and entreating him to his utmost endeavor to defeat the measure."

The chair appointed the following committee, to which, on motion, he himself was added: Prof. Armstrong, R. A. Gray, L. F. Moulton, F. W. Willis. The secretary was requested to correspond with different parties to procure proper solutions for the preservation of green fruits for exhibition.

The meeting adjourned to same time and place Saturday, 17th inst.

ANTI-DEBRIS.—At a meeting of the Colusa County Board of Supervisors held Monday, March 5th, in the matter of the adoption of resolutions of the Anti-Debris Association of the Sacramento Valley, on motion of C. C. Felts, seconded by M. O'Hair, the said resolutions were adopted, and the adoption thereof indorsed on said resolutions and returned to the manager of the Anti-Debris Association of the Sacramento Valley at Yuba City.

SASSAFRAS.—Who that was raised in the backwoods of any of the Southwestern States has not been surfeited with sassafras tea? It was the popular drink of the days of our boyhood, especially in springtime. What boy brought up on a farm has not grubbed sassafras sprouts until almost on the point of saying bad words? As a reminiscence of old times W. G. Kitcher, now in Missouri, sent Tom Coleman a number of sassafras sprouts, and Tom gave us one, which has found a resting-place in the backyard, where in future years it may send out sprouts for the correction of the coming generation.

Contra Costa.

AGRICULTURAL ASSOCIATION.—*Item*, March 9: Owing to only a partial attendance of the stockholders of the Contra Costa Agricultural and Industrial Association, at the annual meeting called for Monday last at the fair grounds, it was deemed advisable to postpone the meeting to Saturday, March 17, 1888, when a full attendance of stockholders is expected.

El Dorado.

AGRICULTURAL ASSOCIATION.—*Placerville Republican*, March 8: The Board of Directors of our District Agricultural Association met at the

office of the secretary in this city last Tuesday evening. T. Fraser was unanimously elected president for the ensuing year. W. H. H. Fellows was elected secretary and his salary fixed at \$100 per year. James Blair was elected treasurer, E. A. Boles, superintendent of park, and Albert Norris, superintendent of the pavilion. Committees were appointed as follows: On premium lists—Norris, Allen and Alderson. On speed program—Leachman, Fraser and Inch. The date of the fair was fixed for August 21st, to continue five days, including the first. The following resolution was adopted:

Resolved, That the Board of Directors of the E. D. A. Association returns to Galusha Carpenter, the retiring secretary, its heartfelt thanks for his untiring and honest efforts to make its exhibitions a success, and for the honest, faithful and efficient manner in which he discharged the duties of the office, we shall always feel grateful.

Fresno.

WINERY BURNED.—*Fresno Republican*, March 9: The Margherita winery, situated about five miles east of this city and owned by Rogers & Co. of S. F., was totally destroyed, with its contents, by fire on Saturday morning. The winery was fitted up with fine machinery, comprising a complete still, and occupied two buildings—one 150x75 feet and the other 100x50 feet. There was a large quantity of wine and grape brandy in vats aging and in barrels ready for shipment. Capt. St. Hubert, the foreman, was awakened by the light from the burning buildings shining through the windows of his room. He sprang from bed, ran to the quarters occupied by the men and aroused them. They worked heroically, but only saved about 30 barrels of wine and 18 barrels of brandy, which were ready for shipment and near the doors. The roof fell in almost as soon as the men got to work. He is at a loss to account for the fire, unless it caught in the roof from a spark from the engine-stack, as the engine had been running all day Friday, sawing wood.

Merced.

RABBIT-DRIVE PROJECTED.—*Merced*, March 7: Preparations are being made for a great rabbit drive here on the 22d inst., to wind up with a free barbecue for all. Rabbits have become very plentiful, and are very destructive to wheat-fields, orchards and gardens. The drive has been gotten up for the double purpose of destroying the vermin and having a fine day's sport.

Monterey.

EDITORS PRESS.—Our portion of Monterey county (Jolon) is seldom represented in your paper. People outside don't believe we ever produce anything in our little valley, because we have no railroad through it, the nearest point being 14 miles. But fruit and grains of the finest quality are raised here. There is not very much fruit as yet, because it has not been planted so extensively as in our neighboring counties; but what there is, is excellent. The olive flourishes here, there being some trees nearly a century old and bearing liberally every year. On the San Carpojo creek there are several from 14 to 16 inches in diameter, and a number of pear trees from one foot to 18 inches in diameter. The climate is warm, and it is hard to grow apples the first year, but after that they do as well as any fruit. M. Boehinger and J. O. Edwards have fine young orchards in bearing. The fruit is large and delicious. P. Stretch (and several others) has planted out over 2000 vines this year. The feed on the ranches is growing splendidly. Stock is looking well and will be fit for beef in a month or six weeks. The heavy mast of last year and early feed carried many thousands through the winter.—*EXCELSIOR, Jolon, March 12th.*

Nevada.

ORANGE TREES.—*Grass Valley Tidings*, March 7: Orange trees on the Marsh & Nile fruit farm, in the Pat Hill neighborhood, lost their leaves through the freezing temperature prevalent in January last, but the baneful effects went no further. The same trees are now budding as though the freeze had never been, and all other trees and shrubs are in bloom and beautiful in their leafy greenness. This was the first time in 11 years that orange trees in that locality have in anywise been affected by frigid temperature. Thirty-five three-year-old Florida orange trees have been set out this season on the Marsh & Nile place. The venture is a success so far as can yet be determined.

Placer.

HARDY ORANGES.—*Auburn Republican*: A careful examination of Placer county orange trees shows two things: (1) that the damage done by the January frost is not so great as has been supposed, as only a very small percentage of the trees were killed; (2) that the Mediterranean Sweet is the variety which suffered most. Very few Washington Navel or other budded varieties are injured, but the Mediterranean Sweets prove to be less hardy.

CHESTNUTS ON OAKS.—*Record Union*, March 8: G. O. Hayford of Colfax has made a most interesting, and what promises to be a very valuable, discovery in the way of nut-growing. Owing to observations that the nuts of the black oak and the Italian chestnut were similar in shell and texture of meat, he concluded that the latter might be successfully grafted upon the former, and last year tried the experiment. He grafted a number of small oaks with scions from Italian chestnuts of previous year's growth, and with the most gratifying results. Nearly every one of the grafts grew and attained a remarkable height for a single year. The union between the stock and

grafted section is excellent, and the new growth gives a specially vigorous and hardy appearance. A sample of the growth made upon Mr. Hayford's premises last year may be seen at this office. Marco Varozzi, who has an excellent farm at Middletown, near Placerville, El Dorado county, tried the same thing successfully two years ago.

Sacramento.

FINE ANIMALS.—*Record Union*, March 10: A magnificent horse and a dog attracted much attention on the streets yesterday. They were in charge of T. H. Stevenson of Detroit, who brought them from Michigan for Voorhies & Barney of Sutter Creek. The stallion is a recent importation from France, a three year-old thoroughbred Norman Percheron, weighing 1700 pounds. He is a beautiful dapple bay with black points. The same owners have brought out also two splendid mares of the same stock. Mr. Stevenson has also with him a fine specimen of the smooth-coated St. Bernard dog. She stands 33 inches at the shoulder, weighs 165 pounds, measures six feet two inches from tip to tip, and is valued at \$1000. Joan is all white, and is a grand-looking animal. She was whelped March 30, 1886, at Whitworth, England, and last year won the second prize at the Detroit (Mich.) dog show. Her pedigree is as follows: Joan—By King Alfred, ex-Lady Superior. King Alfred is by Champion Beau Chief (No. 11,793 Eng. K. Stud-book), ex-Alphenrose. Lady Superior (No. 18,008) is by Tours (No. 14,944), ex-Abess.

ORCHARDS AND GARDENS THRIVING.—*Bee*, March 8: John Miller, of Walnut Grove, said this morning that prospects in the rich region down the river were never so flattering as now. The winter has been particularly propitious for fruit of all kinds. Between Sunday's gale and the frosts, some of the apricot blossoms have fallen off, but the trees will still have to be thinned out, so heavily have they blossomed. Peaches were not far enough advanced to suffer at all. The down-river orchardists are particularly happy because they believe they have got the scale bug under subjection. Mr. Miller says that the fruit yield will be fully as great as the enormous product of last year. Orchardists are taking better care of their orchards, and careful, intelligent farming is taking the place of the indifferent methods of the past. The barley lands have just been seeded and a big crop is confidently expected, especially since the ground is in better condition than last year. The gardeners are planting potatoes, of which two crops will be produced. Beans and other garden truck are being either planted or else have already attained healthy, vigorous growth. The levees along the river are in better order than ever.

Santa Clara.

REJOICING OVER A CANNERY.—*Mountain View Ctr. Mercury*, March 3: The town is full of life to-day. Castro street, the principal thoroughfare, is lined with teams of our solid farmers and fruit men; flags are flying, making quite a gala day; and the occasion for all this was the final meeting of the stockholders and others interested to elect a board of seven Directors for our cannery and fruit-drying establishment. The following gentlemen were elected: Donl Frink, John Birgen, W. A. Nygh, Dr. O. P. Askam, J. E. Williams, Henry McCleary and Prof. D. T. Bateman.

FLORAL FAIR IN PROSPECT.—At a meeting of the Directors of the Horticultural Association, held in San Jose March 3d, the *Mercury* says it was resolved to give the use of the hall to the ladies of the Conservatory of Music Association some time in May, for the purpose of holding a Floral Fair; and by so doing the Board decided to dispense with holding one themselves. The ladies intend to hold a five days' session at the time when the flowers will be most numerous and easy to be obtained. The exact time of holding the fair has not been determined.

GILROY CANNERY.—*Gazette*: The cannery building is being rapidly constructed, the contractor being Charles W. Pedlar of Gilroy, a mechanic who appears entirely competent, and is furnishing employment to several deserving home workmen. The main building is two stories high, 36x60 feet. There will also be an addition 22x40 feet, and the whole building will be practical and substantial, especially adapted to the purpose to which it is to be devoted. The boiler of 50 horse power is already in position, and the engine, and considerable other essential machinery, is on the ground. The location is well chosen, everything that is needed being at hand, and very convenient. The Southern Pacific railway runs within a few rods of the door, and thus the important question of shipments both to and from the cannery is a matter easily solved, as the expense of laying a switch to the establishment is something hardly worthy of consideration.

Santa Cruz.

FAIR BUILDING ASSOCIATION.—*Sentinel*, March 10: At the meeting of the stockholders of the Santa Cruz Fair Building Association held Saturday afternoon, the following directors were elected: L. K. Baldwin, L. H. Comstock, E. B. Cannon, M. Kinsley, R. C. Kirby, Jo. Francis and O. L. Gordon; also the following officers were elected: President, L. K. Baldwin; Secretary, Oscar L. Gordon; Treas., R. C. Kirby.

Shasta.

PLANTING AN ASSORTMENT.—*Redding Democrat*, March 7: Mr. Hemsted is putting out about 1000 trees; 100 each of olives, almonds,

mulberry, and the rest deciduous fruits of all kinds. He is also setting out a fine collection of Eastern grapes, as an experiment, and a new variety of dewberry.

Solano.

EDITORS PRESS.—The weather is pleasant, with cool nights; a little frost, two nights since the storm; three inches of rain the last storm, and nearly 17 for the season. Some tomato plants are set out. The apricots do not seem to be hurt by the cold, so far as can be seen now, and there is a prospect of a heavy crop in the vicinity of Vacaville and on Putah creek. In Pleasant Valley many trees have scarcely any blossoms on, and the crop will probably be much lighter than last year. Peach trees in Vaca Valley are as full of bloom-buds as they can well be. Grass and grains are growing very fast, but grain sown just before the freeze is thin in spots. No stock has died here this winter for the want of feed or from the cold.—*G., Vacaville, March 11th.*

THE MONTEZUMA HILLS.—*Cor. Woodland Democrat*: These noteworthy hills commence eight miles east of Suisun and eight miles south of Elmira, and extend 15 miles in a southeast direction to Colvilleville and Rio Vista. These hills are most noted for immense grain ranches, while near the borders next to the river and tule lands the dairy business is extensively carried on, and some of the largest poultry raisers are to be found dotted about among the hills. The area seeded is the largest for many years; from the present indications the yield will be abundant. On the west side those who have experimented raise the finest of pears, apples, plums and cherries, yet grain-growing is the chief enterprise. Samuel Stewart's dairy ranch is the first ranch we enter on the border of the hills. This comprises nearly 3000 acres, besides an extensive tule range, and his stock is of the finest. After leaving this ranch, we soon arrive at the small village of Denverton, or Nourse's landing. Dr. S. K. Nourse is an extensive dairyman, and has a fine head of stock. A schooner owned by Dr. N. makes weekly trips to S. F. The large stock ranches formerly belonging to Harmon & Barbour are owned by S. F. parties and rented to Swiss dairymen.

Tulare.

WARRING ON THE BARES.—*Visalia Times*, March 8: At the rabbit-drive on Sunday last, 24 miles southwest of Delano, 4800 rabbits were corralled and killed. It is estimated that 50,000 rabbits have been slaughtered in this county within the last three months through the instrumentality of drives and corrals. Residents in the vicinity of Crickerville, 12 miles north of this city, have ordered 300 rods of wire netting to be used as a corral and wings in rabbit-drives. Rabbits are numerous in that section, and it is the disposition of the people there to join with others in ridding this county of the pest. The Grangers' Union of this city has this week sold 1000 rods of wire netting, to be used in constructing rabbit corrals and fences. The cost of one of these corrals varies from \$195 to \$220 each, and the money to pay for them is generally raised by subscription among those to be benefited.

FROSTS AND FRUITS.—Opinions vary as to the late frosts on the coming fruit crop. Only a small portion of apricot trees were in bloom, and those that were are probably done for. Peaches are also somewhat injured, many of them being in full bloom. Figs are no doubt damaged and the first crop will prove very light. Almonds have suffered severely, and the crop will prove very light, if there are any at all. The early crop of figs generally sells at four cents per pound, and hence their loss will be felt.

PLANTING FOR RAISINS.—There is considerable activity in this county at present in the way of planting raisin vineyards. The vines used are of the Muscatelle, Gordo Blanco and Muscat of Alexandria varieties, which are found to be the best adapted to the soils of this county. Some of the gentlemen engaged in this line are making a mistake by setting out the Malaga grape, which does not do well here, the yield being low, the grape small and deficient in pulp for a raisin grape. The average yield of the first-named grapes in this county has heretofore been about 10 tons to the acre, which exceeds the yield of the coast counties about three tons to the acre.

Ventura.

A CHEERING OUTLOOK.—*Democrat*, March 8: All of our farmers with whom we have talked on the subject are delighted with the crop prospects. The rainfall has been ample, and the acreage will be large, perhaps larger than ever before, on account of the increased population of the county. New orchards and vineyards set out within the last three or four years will bear their first crops this season; better facilities for preserving crops will be needed, and the new enterprises being pushed, together with the incoming tide of people attracted by these conditions, will encourage efforts on the part of people generally to make the most of their opportunity. The outlook for our county is truly favorable.

Yuba.

IRRIGATING SCHEME.—*Grass Valley Union*: James O'Brien of Saartsville, who owns the old Camp Far West ditch, that takes water from lower Wolf creek, near the Lime Kila, proposes to reopen it for the purpose of conveying water for irrigation purposes in the country below Spenceville. Some of the farmers through whose lands the ditch runs are oppos-

ing the reopening—which seems rather strange, considering the chance it would give them for irrigating water.

MARYSVILLE CANNERY.—*Appeal*, March 9: The new cannery buildings in this city will be commenced as soon as the weather will permit. The contractors are Swain & Hudson. The buildings will be three in number, very simple in structure, though put up in such a manner that they will be durable and present an exterior equal in looks to any of the interior county canneries, while the arrangements within will afford accommodations for the latest improved machinery, and for comfort and rapid work when the packing season is on. The foundations will be of brick, raised two feet from the ground. The main building will face on Tenth street, and be 30x105. The second building will be 30x75, and the cooler 20x40. A1 will be 12 feet high, with arched roofs of shake. The exterior finish will be in rustic, and the interior will be without finish. A heavy board flooring will be placed in all the buildings. In addition to these, it will be necessary to erect engine rooms, office, and other structures required in the business, but these can be attended to later on. The parties engaged in this enterprise are among the principal stockowners in the Golden Gate Packing Co. of San Jose. They have plenty of means, and will push their operations here as fast as the local supply of fruit will warrant.

NEVADA.

SHEEP IN EASTERN NEVADA.—Elko Cor. Gazette, March 3: The great sheep interests of the State in eastern localities seem to have suffered more during the present winter than any other kind of stock. The depth of snow was greater southward than north. As no two winters are ever alike, the probabilities are that the past winter will not duplicate itself for 25 or 30 years. Mr. Mitchell of Huntington valley, who has a large band of sheep that was driven in the early fall southward into White Pine county, has wintered reasonably well. He thinks his loss will not exceed more than 1200 by lambing time. P. Martin, who wintered his band of sheep some 35 miles east of Austin, in Grass Valley, Lander county, was not so fortunate as Mr. Mitchell, as his loss was quite heavy, being not less than 1000 out of 4000 head. This is the heaviest loss I have heard of in all Eastern Nevada. All of the sheepmen report heavy weather throughout southern White Pine, Eureka, Lander, northern Nye and Lincoln counties. Nevertheless, from some unaccountable cause, certain localities seem to have been partially exempt from the most of the severe weather, and consequently one bunch of cattle or sheep may have suffered considerably, while another band have come out of the winter in good condition, and the distance intervening between these bunches of stock not exceed 50 or 60 miles. Close observers of wind and weather assert that high mountains with deep canyons that make down into the valleys below, coursing their way east and west, are always warmer than those running north and south, but give no substantial reason for this fact. . . . E. C. Hardy of the Oasis ranch, Elko county, who is one of the best-posted stockmen in Eastern Nevada, says that Tecoma and Steptoe valleys, as far south as 75 miles from the Central Pacific railroad, have afforded splendid pasture for all kinds of stock during the present winter, and that no losses will be sustained more than has been usual heretofore. "My band of 550 sheep," he writes, "have wintered most excellently. I have only lost a few of the earliest of the poorest lambs and some old ewes, making to date about 150 head, all told. I have come out of the winter with my stock of all kinds in a condition highly satisfactory." This splendid condition of Mr. Hardy's stock is due to the fact that he has a safe and extensive range, and put up large quantities of hay, which he fed to his poorest stock of cattle and sheep and his fine brood mares, and will carry over a large quantity of hay for next winter's use. I learn from the same source that Cave & Hurley of Tecoma, Elko county, fear heavy losses, as their band of stock encountered heavy weather and deep snow, and the sheep east of that point have suffered considerably—in fact the further south and southeast you go into Nevada and Utah the greater the losses seem to be.

NEW MEXICO.

FRUIT IN TAOS VALLEY.—A. Gusdorf in Albuquerque Citizen: Ten or twelve years ago almost everybody was under the impression that this valley was too cold for fruit-raising, and made fun of the parties who planted fruit trees. The writer was among those who tried the experiment, and planted about 400 trees of apple, pear, plum, peach, apricot and cherry; also small fruits. Three years later people began to change their tune, as the trees commenced to bear, slightly at first, but increasing every year, and there has not been a single failure in eight years. This I consider a pretty good indication that the Taos valley can raise fruits; and for quality and flavor it challenges the world, especially on apples, pears, plums and small fruits. The varieties of apple best adapted, so far as tried, are the following: For early—Early Harvest, Red June and Astrachan, and for winter varieties, the Geneton, Red, Ben Davis, Wine Sap, Baldwin, Rambo and Rhode Island Greening. Pears—Bartlett, Clapp's Favorite, Vicar of Winkfield, Louise Bonne de Jersey and Beurre D'Anjou.

WELLS, RICHARDSON & CO'S IMPROVED Butter Color.

EXCELS IN { STRENGTH
PURITY
BRIGHTNESS

Always gives a bright natural color, never turns rancid. Will not color the Buttermilk. Used by thousands of the best Creameries and Dairies. Do not allow your dealer to convince you that some other kind is just as good. Tell him the BEST is what you want, and you must have Wells, Richardson & Co's Improved Butter Color.

Three sizes, 25c. 50c. \$1.00. For sale everywhere. WELLS, RICHARDSON & CO. Burlington, Vt.

(33 Colors.) DIAMOND DYES

are the Purest, Cheapest, Strongest, and most Durable Dyes ever made. One 10c. package will color 1 to 4 pounds of Dress Goods, Garments, Yarns, Rags, etc. Unequalled for Feathers, Ribbons, and all Fancy Dyeing. Also Diamond Paints, for Gilding, Bronzing, etc. Any color Dye or Paint, with full instructions and sample card mailed for 10 cents. At all Druggists WELLS, RICHARDSON & CO., BURLINGTON, VT.

AGRICULTURAL SCIENCE.

Report on the Establishment of Outlying Culture Stations.

University Experiment Station. Bulletin No. 78.

President E. S. Holden—DEAR SIR: I respectfully submit the following considerations and statements concerning the organization of the Agricultural Experiment Station work under the provisions of the "Hatch Bill," which has now been made effective by the appropriation that has lately passed Congress:

The Experiment Station work that for 10 years past has been carried on so far as the funds of the University, and the State appropriations made from time to time, have permitted, is entirely of the character contemplated by the "Hatch Experiment Station Bill," and the interest it has excited in this State has not only found expression in the increased appropriations consecutively made for its support by the Legislature, but also by the desire manifested for its expansion so as to provide adequately for the varied needs of the widely different climatic regions of California. It being manifestly impossible to represent by the work of any single station the conditions of a State co-extensive with the section of the Atlantic Coast reaching from Cape Cod to the Savannah river, the establishment of outlying Culture Experiment Stations has long been urged, and to some extent the demand has been supplied by the annual distribution of seeds and living plants throughout the State, to persons applying for them and willing to make trials and report thereon to the Agricultural Department. The last annual report records the outcome of a large number of experiments thus initiated; yet it cannot be denied that, considering the large number of persons to whom distributions have been made, the responses have been relatively few and too often of a very unsatisfactory character, owing to the unavoidable want of necessary attention on the part of the distributees. At all events, these results have served to emphasize the need of Regional Culture Stations under competent supervision, and the desire of the agricultural public in that direction has repeatedly found utterance in resolutions of the State Grange, State conventions and other public meetings. Those passed at the last meetings of these bodies are especially emphatic, and the support thus given has doubtless aided greatly in the passage of the appropriation act through Congress.

Our general policy in regard to this subject being thus understood, the principles that should guide in the establishment of such culture experiment stations require a brief discussion.

In determining the proper location of the outlying stations, their distinctive objects, and relation to the central station at Berkeley, should be kept clearly in view. The latter must of necessity cover the whole ground of investigation in agricultural science and practice, as recited in the Act of Congress and as heretofore carried out so far as the means at command permitted. The outlying stations, on the contrary, are designed to be essentially "culture stations" only, in which the adaptations of culture plants to the local climates and soils are to be tested systematically, in order to relieve the practical farmer from the necessity of making such trials at his individual and often very heavy expense in unproductive investments, and the results of which after all are not convincing to others and do not become part of public experience.

With this object in view, it is evident that in the selection of locations for such stations the following points should be primarily regarded:

1. Each station should be representative of as large an area of agricultural land as possible, with respect to climatic conditions first of all, and secondly with respect to soil conditions.
2. Agricultural regions of which the adaptations and peculiarities are still uncertain should receive attention first, since it is here that the greatest volume of work remains to be done; while in regions that have been settled up long ago, the trials of individual culture plants that may come into question may be intrusted to intelligent individuals.

This implies, conversely, that when, after a time, which may vary from 10 to 20 or more years, a culture station shall have fulfilled its main objects, it may be dispensed with, or transferred to another locality standing in need of such work. Yet it may also turn out to be desirable to maintain some outlying station or stations permanently, and invest them with additional functions in the prosecution of agricultural experimentation. Under this point of view it would seem to be desirable that the lands occupied should be held in trust, or on lease, rather than in fee simple, by the University.

It is my impression that such tenure of land for the purposes of a culture station can, in most, if not in all cases, be obtained by consent or donation from the owner, with only nominal expense to the institution.

As regards the necessary buildings, the Act provides that a sum not exceeding \$3000 may be expended for buildings and repairs, the first (this) year, but thereafter only \$750 per year shall be so applicable. This provision was evidently intended to prevent the improper use of the fund for extensive buildings, allowing only what

is considered absolutely essential, such as dwellings for employees, barn, tool and propagating house, to be defrayed out of the appropriation. This works well enough where, as in the smaller Eastern States, one single station answers all purposes. But where, as in California, at least five stations (besides the central one at Berkeley) will be required to represent even remotely the several agricultural regions, this provision leaves us without the means of providing for their buildings.

From the offers and suggestions already received, I believe that this difficulty can be overcome by inviting subscriptions to defray the cost of needed buildings, in the localities or regions that will be benefited by their establishment. It would manifestly be invidious to allot the whole \$3000 permitted by law to any one favored locality, unless it be the central station at Berkeley. The latter, as you are aware, stands in the most urgent need of buildings that shall properly subserve the uses of the Experiment Station, which at present has neither office, nor collection room, nor adequate laboratory accommodations. In conformity with this view, I have already submitted to you suggestions and plans by which, supplementing the \$3000 with an appropriate sum from the University fund, a satisfactory building for the use of the station may be constructed, mostly upon foundations already existing. This is really the first need for the successful management of the already complex work, which will become additionally heavy and complicated when the outlying stations shall have been established.

As regards the number and general collocation of these culture stations, I have already, in former reports and communications, outlined my views in the premises. They are based upon the natural agricultural subdivisions of the State, which may be stated as follows:

1. Southern region, from San Diego to Santa Barbara, and inland to the Mojave and Colorado deserts.
2. San Joaquin valley, from the Tejon mountains to Stockton.
3. Sacramento valley, from Stockton northward.
4. Foothills of the Sierra, substantially from Fresno to Tehama county.
5. Coast Range region.

It is impossible to make fewer divisions, and consequently five outlying culture stations is the minimum number that can at all represent the State. The Coast Range might be supposed to

SECTIONAL VIEW OF PARSON'S FRUIT DRIER.

be represented by the central station at Berkeley, but it is notorious that this is not at all the case. The Berkeley climate represents only a very limited area, directly influenced by the fogs that pour in through the Golden Gate at the time when the maximum heat prevails elsewhere. As a culture station, it is not happily located, and the Coast Range should be otherwise represented. In view of the considerations already set forth above, it appears to me that the extensive and important region lately opened up to settlement by the extension of the Southern Pacific railroad toward San Luis Obispo, along the largest river of the Coast Range, the Salinas, is eminently entitled to consideration, it being a new and apparently most promising field for varied cultures. I submit herewith a proposition looking toward the establishment of a station, on the general basis as above outlined, by a donation of land in trust and the raising of a sum sufficient for the erection of buildings, on the part of Mr. J. V. Webster of Creston, San Luis Obispo county. The land offered is situated within a few miles of the town of Paso Robles, and in my view will be as fairly representative of the culture conditions of the fine agricultural region of the Upper Salinas as could be readily chosen. I therefore respectfully recommend the formal acceptance of Mr. Webster's proposition at the coming meeting of the Board of Regents, and that the expenditure needful for farther equipment and such work as the season will permit, be authorized.

Another most acceptable offer of a similar tenor comes from Senator A. Caminetti and others, offering a tract of land within a few miles (the exact location yet to be determined upon) of Jackson, Amador county. As that county is very nearly centrally located within the Foothill region as above defined, and as personal examination has satisfied me that the soil and climate of the locations of which the choice is offered is as fairly representative of the foothill region at large as any one location that could be selected, I also recommend the acceptance of this offer, it being the only one that has come from that region, and being in every

respect a fair one, besides being situated in a community anxious for information as to untried cultures.

I am in receipt of suggestions and offers of co-operation from various other points, notably from Tulare county, from Santa Barbara, (the same as formerly communicated to you), and from the county of Los Angeles. None of these suggestions have as yet taken so definite a form as to call for a recommendation on my part at this time. But in view of the lateness of the season and of the short time remaining within which the appropriation for the present fiscal year can be expended, I urgently recommend that the power to accept appropriate donations for culture stations, and to take proper action thereon, be delegated to a committee that can be easily called together; since the necessity of awaiting the action of a regular meeting of the Board of Regents would defeat all further progress in the establishment of stations for this season.

I have in view one other station, the establishment of which will involve but little initial or current expense, and which would adequately represent the higher portion of the middle Coast Ranges. I refer to Mount Hamilton, the native vegetation of which shows unexpected possibilities in the way of cultivation at the height of 4000 feet. I have found at this altitude the native grapevine and a growth of oaks and other plants rivaling that of many interior valleys. Apart from the desirability of thus facilitating the supply of life's necessities to the personnel on the mountain, the success of cultures at that elevation would go far to show the latent possibilities of the lower ridges, now mere pasture-grounds. I, therefore, suggest that so soon as the Mount Hamilton domain shall have been turned over to the Regents, operations looking toward at least a small culture plot be at once begun, so as, if possible, to gain a year's time in actual experience.

It should not be forgotten that besides these new stations and the one at Berkeley, three specially viticultural stations, based entirely on private munificence, are already in operation. Two of these are located on opposite sides of the Santa Clara valley (at Cupertino and Mission San Jose), and one at Fresno. If these are maintained and the plans above outlined are carried out, we will have ten stations in all to look after. This is a very respectable number, and it is obvious that it cannot be

Parsons' Fruit Evaporator.

An evaporator which seems to have made an excellent record during the last year, according to all accounts we have received, is Parsons' drier, originating in the Santa Clara fruit district. The inventor, L. W. Parsons of San Jose, claims his arrangement secures several results, and in his circular mentions specially thorough ventilation or adequate draft, which quickly removes the moisture-laden air from contact with the fruit, and thus removes chance of sweating. Another point claimed is the advantage of bringing the fruit at once into air of a very high temperature and thus searing it over so that natural flavors and color are better preserved. The fruit is moved in a few moments to a cooler location out of danger of scorching, where it finds a current of dry air to carry on the evaporation of the moisture. It proceeds constantly against the blast of dry air and is finally allowed to finish in a cool, dry place, where it is claimed it cannot be discolored or saturated with moist vapor.

The sectional engraving on this page shows the internal arrangement of the drier by which the results claimed are secured. As will be seen, it is a horizontal machine, which is claimed to be the most convenient form. It is divided into an upper or fruit-drying chamber, and a lower or hot-air chamber, by a floor of sheet iron. At one end of the lower chamber is the furnace. A damper in the top of the heater can be operated so the different kinds of fruit may be seared or not, thus especially adapting this drier to different kinds of work; and when opened, it is claimed that the space above can remain full all night without burning the fruit.

The heat of the fire is economized and distributed by conducting it through flues inside of the machine. Air enters at the bottom of the furnace, is heated, and passing through the hot-air chamber containing the radiating flues, heats the sheet-iron floor above, which in turn radiates heat up into the fruit, thus helping to maintain the proper temperature. The current of hot air passing in the direction indicated by the arrows, rises at the back end of the drier into the fruit chamber. This dry air begins work on comparatively dry fruit, readily absorbing what little moisture is here offered it; passes on, finding more and more vapor, easily takes it up, and on reaching the front end is reheated from the furnace top. Floors in the fruit chamber compel the air currents to move horizontally and thus reach all parts of the chamber. With its absorptive powers greatly increased, it strikes the fresh-cut fruit just introduced, quickly absorbs its new load of moisture, and with fresh impulse, caused by the reheating, rushes up the escape flue to the outer air. The draft is so strong that it has been found necessary to place a valve in the escape flue to regulate it for different kinds of work.

Mr. Parsons' driers are made at the San Jose Agricultural Works, San Jose, Cal., where the inventor has his office.

Stockton Industries.

(By J. C. H.)

The city of Stockton maintains a leading position as a manufacturing city for agricultural implements.

The Stockton Combined Harvester and Agricultural Works are setting up a full line of combined harvesters, principally the improved "Houser." For several years the best efforts of inventive genius and mechanical skill have been applied to this harvester until a California invention has revolutionized harvesting cereals in the great grain growing belts on the Pacific Coast. Miller's Lightning Hay Press is manufactured at these works and there is now a good stock on hand.

The H. C. Plow Works have secured the letters patent of Powell's Derrick, and will be prepared to fill all orders.

The Matteson & Williamson Manufacturing Company are blocking out a number of combined harvesters known as the "Harvest Queen." The hum of industry and improvements can be heard and seen in all portions of this thriving inland city, and material prosperity pervades this section of our State.

Ashley's Scraper.

The demand for road and land scrapers has increased each year, especially since a system of irrigation has been inaugurated in different portions of our State. Inventors and mechanical genius have been stimulated in bringing out an implement that would fill this want. One of the latest was invented and patented by Mr. L. E. Ashley of Stockton. This tool has been put into practical use during the last year and has become a favorite implement. A Rural representative saw this scraper at work last week grading the streets in the addition to the town of Lathrop. It was handled with ease by six horses, and was able to follow the plow and throw up the soil as fast as a four-horse team could plow, and easily make a ditch, if desired, four feet deep. An illustration and full description of this implement appeared in the Rural last fall, and the cut can now be seen in our advertising columns.

The Montana Stock-Growers' Journal claims that Montana has no long list of casualties and terrible sufferings to report as the result of the unusually severe storms this winter.

much increased without special strong reasons or, perhaps, additional pecuniary means. I estimate the current expense of maintenance of a general culture station, of 15 to 20 acres, once established and equipped, at between \$2000 and \$2500 per annum; and it is thus easily seen that the limits of the Congressional fund will very nearly have been reached when the present plans are carried into effect.

Respectfully submitted,

E. W. HILGARD,
Professor of Agriculture.

Berkeley, March 12th.

BADEN FARM.—Robert Ashburner, the well-known Shorthorn breeder of Baden Farm, San Mateo county, reports shipment to J. D. Pemberton of Victoria of a six months' bull calf, Baron Frantic 8th, a superior calf by Baden Duke out Frantic 9th by Crown Prince of Lightburne. Mr. Ashburner's cattle seem to give good satisfaction in the Northern country, for he has just received an application for another bull from a man to whom he shipped one six years ago. He has now on hand several young bulls, 11 months and younger, of great promise. He is now preparing a shipment of 10 head of dairy cows for Japan, as the Japanese believe in securing better cattle than some which they have imported during recent years.

SAN ANTONIO, TEXAS, claims to be the first horse market of the world. The claim is based on the data of last year's trade, which has just been made up. According to these figures, San Antonio in 1887 sold \$1,500,000 worth of horses. By rail from that market were shipped 64,175 head, against 46,365 in 1886. The number driven from there last year was 3000.

D. M. FERRY & Co. of Detroit, Michigan, send us their Seed Annual for the current year, which is full of desirable things. The sample seed packages which Ferry & Co. usually send have furnished us many good things for our garden. We find the seeds fresh and the varieties good.

Why Such Choice Horses are Sold.

A few years ago Mr. F. T. Underhill of N. Y. bought the Ontare ranch of 800 acres in the vicinity of Santa Barbara and placed upon it a herd of Holstein cattle and a select lot of trotting stallions and brood mares. The predominant blood in the horses is that of Ryeddy's Hambletonian, a dash of which seems all-important in the pedigree of a well-bred trotting stallion or mare. This is supplemented by strains of nearly every blood recognized in the production of the American trotter. It was Mr. Underhill's ambition to create a breeding establishment that would take rank with the best upon the coast, and neither care nor expense were spared in the effort.

But the sudden and marvelous rise in real estate in the vicinity of Santa Barbara made it seem wise to dispose of the ranch and abandon the idea of a standard stock farm. This is the true and only reason for disposing of the horses advertised to be sold by Killip & Co. at the Bay District Track on the 20th inst.

It is doubtful if such a lot of stallions and brood mares has ever yet been placed before the California public, and they will doubtless be eagerly sought for. The sale will be absolutely without reserve.

Catalogues and all required information will be furnished upon application to C. F. Swan, manager, Los Alamos, or to Killip & Co., 22 Montgomery street, S. F.

We are also requested to say that, by permission of Mr. Swan, manager of the Ontare ranch, there will be offered for sale at the same time and place the standard bred filly "Clara E.," bred by G. A. Beaucamp, Concordia, Kansas, and owned by S. C. Davidson of San Diego. Also the thoroughbred trotting stallion Wilkes Pasha 2618, a full description of whose pedigree will be found in our advertising columns. This horse, apart from his trotting qualities and pedigree, will be found invaluable to breeders of useful stock through his remarkable size and quality.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, etc.,

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by DEWEY & CO., publishers, 220 Market St., San Francisco.

Carriages.

We are receiving 10 carloads of Carriages, Buggies and Wagons from the Briggs Carriage Company of Amesbury, Mass., which will be sold at prices that will be satisfactory, considering style and workmanship. Quality of material guaranteed the best.

F. A. BRIGGS & CO.,

220 & 222 Mission St., San Francisco, Cal.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

A Rare Chance.

The Gabilan Rancho, situated in Monterey county, containing 7665 acres, is offered at \$36.50 an acre, for 30 days, on long time and easy terms. Address, J. C. HOAG, 312 Van Ness avenue, San Francisco.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl St., New York.

Sonoma, Cal.

THE SAN JOSE

Orchard & Vineyard Cultivator.

The most complete and the easiest handled machine in existence. Made entirely of Iron and Steel, with the exception of the poles. Weight, 335 pounds. This is the only machine that can be handled on the sidehill. By means of the shifting pole and the adjustable teeth the machine works to perfection. These can be used to advantage on level ground also and the machine made to work fully a foot and one half nearer the trees.

All our machines are 7-tooth, 4-foot cut, but can be increased to 9-tooth, 5 foot cut by the addition of two extra arms, secured in a grooved casting, in the ends of the frame, by means of a set screw. This is an improvement not to be found in any other Cultivator, and Farmers having both Orchard and Vineyard will readily see its value, for when cultivating in the Vineyard the 7-tooth is as large as can be used, and when cultivating in the Orchard, by the addition of the two extra arms, the machine is increased to 9-tooth and an extra foot of work accomplished with the same amount of team and without undue strain or exertion.

On the 7-tooth machine the outside teeth extend 8 inches outside the wheels, and on the 9-tooth 16 inches. These Cultivators are perfectly balanced by means of a lifting seat.

All our Cultivators have the PATENT STEEL SHOVEL BACK. This is one of the greatest improvements on cultivating too's ever introduced. The Shovel Back Sleeve is fastened to the Stand by a bolt in the lower hole, while in the upper hole we use a hard wood pin, which in case the Shovels catch a root or strike an obstruction, it breaks off and lets the Shovel fly back, so as to pass over. Nothing is broken but the wooden pin, which can be replaced in a minute's time.

We have Agents for these machines in nearly every town in the Fruit-growing districts of the State. Every machine guaranteed to give satisfaction. Write to us for circulars and we will refer you to our nearest Agent.

Awards at the Grape-Growers' Convention.

Especial attention was given to wine tests at this year's convention, samples being submitted to the committees by numbers, and not by name or location of producers. The following are the awards reported to J. H. Wheeler, Chief Executive Officer, omitting the "honorable mentions," which would require more space than we can command:

Red Wine Committee.

The Zinfandels of 1883 and other vintages, also the Zinfandel blends of the same years, have shown superior keeping qualities, and merit the commendation of the committee. In making the following awards your committee selected the three best wines of each type, and then marked the best one of those three as "A," the next best as "B" and the next as "C."

Zinfandel 1887 majority report, A—Ewer A. Atkinson, Rutherford; B—C. C. McIver, Mission San Jose; C—Beard & Putman, Warm Springs.

Zinfandel, 1887, minority report, A—C. C. McIver, Mission San Jose; B—Beard & Putman, Warm Springs; C—Ewer & Atkinson, Rutherford.

Zinfandel, 1886, A—H. W. Crabb, Oakville, Napa county; B—Napa Valley Wine Co., Napa, Napa county; C—Courtois & Co., Larkmead, Napa county.

Zinfandel, 1885 and older, A—A. G. Chauche, Livermore, Alameda county; B—J. A. Stanly, Napa, Napa county; C—C. A. Wetmore, Livermore, Alameda county.

Bordeaux Types.

Malbeck, 1887, A—C. C. McIver, Mission San Jose, Alameda county.

Merlot, 1887, A—C. C. McIver, Mission San Jose, Alameda county.

Verdot, 1887, A—C. C. McIver, Mission San Jose, Alameda county; B—J. P. Smith, Livermore, Alameda county.

Cabernet Franc, 1887, A—Los Gatos and Saratoga Wine Co., Los Gatos; B—C. C. McIver, Mission San Jose, Alameda county.

Cabernet Sauvignon, 1887, A—J. A. Stanly, Napa, Napa county; C—C. C. McIver, Mission San Jose, Alameda county. Minority report, A—C. C. McIver, Mission San Jose, Alameda county; B—J. A. Stanly, Napa, Napa county.

Cabernet, A—M. M. Estee, Napa, Napa county; B—C. A. Wetmore, Livermore, Alameda county. Minority report, A—C. A. Wetmore, Livermore, Alameda county; B—M. M. Estee, Napa, Napa county.

Malbeck, 1886, A—J. H. Wheeler, Livermore, Alameda county.

Cabernet, 1886, A—J. H. Goodman & Co., Napa, Napa county; B—Charles Krug, St. Helena, Napa county.

Cabernet blend, 1886, A—C. A. Wetmore, Livermore, Alameda county; B—Napa Valley Wine Co., Napa, Napa county; C—J. H. Wheeler, Livermore, Alameda county.

Minority report, A—J. H. Wheeler, Livermore, Alameda county; B—C. A. Wetmore, Livermore, Alameda county; C—C. A. Wetmore, Livermore, Alameda county.

Cabernet, 1885, A—M. M. Estee, Napa, Napa county.

Burgundy Types.

Burgundy, 1887, A—Charles Krug, St. Helena, Napa county; B—Courtois & Co., Larkmead, Napa county; C—Napa Valley Wine Co., Napa, Napa county.

Burgundy, 1886, A—S. P. Connor, St. Helena, Napa county; B—Courtois & Co., Larkmead, Napa county; C—H. W. Crabb, Oakville, Napa county.

Burgundy (old), A—C. A. Wetmore, Livermore, Alameda county; B—C. A. Wetmore, Livermore, Alameda county; C—Courtois & Co., Larkmead, Napa county.

Mixed Types.

Mataro, 1887, A—C. A. Wetmore, Livermore, Alameda county; B—Wallace Everson, Livermore, Alameda county.

Zinfandel blends, 1887, A—C. A. Wetmore, Livermore, Alameda county; B—H. B. Wagoner, Livermore, Alameda county.

Zinfandel and Trousseau, 1887, A—Estate J. F. Black, Livermore, Alameda county.

Zinfandel and Cabernet, 1887, A—Charles Krug, St. Helena, Napa county.

Mondouse, 1887, A—C. A. Wetmore, Livermore, Alameda county; B—C. C. McIver, Mission San Jose, Alameda county.

Tannat, 1887, A—J. P. Smith, Livermore, Alameda county; B—J. A. Stanly, Napa, Napa county.

Carignan, 1887, A—R. M. Wheeler, St. Helena, Napa county; B—Los Gatos and Saratoga Wine Co., Los Gatos; C—Napa Valley Wine Co., Napa, Napa county; Baluzat, 1887, A—J. W. Jarvis.

Valdepenas, 1887, A—J. A. Stanly, Napa, Napa county; Grenache, 1887, A—H. H. Delafield, Calistoga, Napa county.

Chauche Noir, 1887, A—H. W. Crabb, Oakville, Napa county; B—George A. Bram, Santa Cruz, Santa Cruz county.

Pieffer's Burgundy, 1887, A—C. C. McIver, Mission San Jose, Alameda county.

Charbono, 1887, A—Beard & Putman, Warm Springs, Alameda county; B—J. P. & R. T. Pierce, Santa Clara; C—M. M. Estee, Napa, Napa county.

Mataro and Carignan, 1887, A—M. Keatinge, Lower Lake, Lake county.

Malvoisie, 1887, A—Drayeur Bros., Healdsburg, Sonoma county.

Malvoisie, B—Courtois & Co., Larkmead, Napa county.

Petite Syrah, 1887, A—H. W. Crabb, Oakville, Napa county.

Petite Syrah, 1887, B—C. C. McIver, Mission San Jose, Alameda county.

Beclan, 1887, A—C. C. McIver, Mission San Jose, Alameda county.

Mission, 1887, C—Drayeur Bros., Healdsburg, Sonoma county. (This was the only sample of Mission submitted, and was fully up to the standard, *sui generis*. "Should auld acquaintance be forgot?")

Pieffer's Burgundy, 1886, A—C. A. Wetmore, Livermore, Alameda county.

Charbono, 1886, A—Mr. Palmtag, Hollister, San Benito county.

Charbono, 1886, B—Ewer & Atkinson, Rutherford, Napa county.

Beclan, 1886, A—H. W. Crabb, Oakville, Napa county.

Spana, 1886, A—Charles Krug, St. Helena, Napa county.

Tennat, 1886, B—Kate F. Warfield, Glen Ellen, Sonoma county.

White Wine Committee.

Petit Bouschet, 1887, A—C. C. McIver, Mission San Jose, Alameda county.

Pied de Pedrix, 1887, B—J. H. Goodman & Co., Napa, Napa county.

Lenoir, 1887, C—Ewer & Atkinson, Rutherford, Napa county.

St. Macaire, 1886, A—Kate F. Warfield, Glen Ellen, Sonoma county.

Lenoir, 1886, B—Ewer & Atkinson, Rutherford, Napa county.

Lenoir, 1886, C—Kate F. Warfield, Glen Ellen, Sonoma county.

Respectfully submitted, R. J. Harrison, H. A. Pellet, A. O. Chauche, C. W. Sutro, J. B. J. Portal, Dr. J. A. Stewart, Committee.

White Wine Committee.

The Committee on White Wines received 126 different samples for competition; nearly half of these were of last vintage. They were not informed where these wines were grown or made, and had to accept the labels as stating facts about variety of grape and age of the wine. Their instructions were to compare wines of same variety and age and to state which they considered the best. Good sound fermentation was found in by far the most of the wines exhibited. Only very few samples show the old-fashioned California milk sourness. Of most of the well-known varieties the committee found some excellent samples which they could show with pride as California products anywhere in the wine-drinking world. By far the larger portion of the fine wines were of the last vintage, 1887.

The committee feel justified in saying as a result of their sampling that they came to the conclusion that California winemen have learned pretty well how to make wine, but most of them have to learn a great deal yet how to handle and keep wine. The following is the report:

Sauterne, 1887, A—Winter & Son, Cloverdale, Sonoma county; B—George A. Bram, Santa Cruz, Santa Cruz county.

Sauterne, 1886, A—J. H. Goodman & Co., Napa, Napa county; B—C. A. Wetmore, Livermore, Alameda county; C—J. P. Smith, Livermore, Alameda county.

Sauterne (old), A—H. W. Crabb, Oakville, Napa county; B—Courtois & Co., Larkmead, Napa county; C—Courtois & Co., Larkmead, Napa county.

Riesling, 1887, A—R. M. Wheeler, St. Helena, Napa county; B—Napa Valley Wine Co., Napa, Napa county; C—M. M. Estee, Napa, Napa county.

Franken-Riesling, 1887, A—Ewer & Atkinson, Rutherford, Napa county; B—E. Meyer, Wrights, Santa Clara county; C—R. H. Delafield, Calistoga, Napa county.

Riesling, 1886, A—H. W. Crabb, Oakville, Napa county; B—J. H. Goodman & Co., Napa, Napa county; C—J. H. Wheeler, Livermore, Alameda county.

Riesling (old), A—None of first quality; B—R. M. Wheeler, St. Helena, Napa county; M. M. Estee, Napa, Napa county.

Burger, 1887, A—N. B. Wagoner, Livermore, Alameda county; B—C. C. McIver, Mission San Jose, Alameda county; C—J. P. & R. T. Pierce, Santa Clara.

Burger, 1886, A—C. C. McIver, Mission San Jose, Alameda county; B—William Palmtag, Hollister, San Benito county.

Gutedel, 1887, A—Napa Valley Wine Co., Napa, Napa county; B—C. C. McIver, Mission San Jose, Alameda county.

Gutedel (old), A—R. M. Wheeler, St. Helena, Napa county; B—R. M. Wheeler, St. Helena, Napa county; C—M. M. Estee, Napa, Napa county.

Golden Chasselas, 1887, A—Ewer & Atkinson, Rutherford, Napa county; B—J. P. & R. T. Pierce, Santa Clara; C—Beard & Putman, Warm Springs, Alameda county.

Chasselas, 1886—None of first quality; B—C. C. McIver, Mission San Jose, Alameda county; C—Kate F. Warfield, Glen Ellen, Sonoma county.

Chauche Gris, 1887, A—George Husmann, Chiles Valley, Napa county; B—I. de Turk, Santa Rosa, Sonoma county; C—Winter & Son, Cloverdale, Sonoma county.

Chauche Gris, 1886—None of the first quality; B—Kate F. Warfield, Glen Ellen, Sonoma county.

THE assessor of Mendocino county has instructed his deputies to assess all real estate in that county 50 per cent higher than last year.

Santa Clara Valley Note.

EDITORS PRESS:—Presuming that all have heard of but have not seen Milpitas, and know of its importance in a political sense, a few facts concerning it will surely be of interest to your readers. It is one of the oldest places in California. In fact, it is so ancient that I failed to find any one living here who was able to tell when it sprang into existence, or the circumstances from which it derived the euphonious title. One thing that all seemed to know and take especial pride in was the fact that, "As Milpitas goes so goes the State," politically, of course. Singularly enough it has so happened that the vote of Milpitas (about 100 strong, perhaps,) has generally proved a pretty sure index of the election. Some comic stories are related of this town, but I will not occupy your valuable space with their rehearsal at this time. I found among the citizens here some of the most intelligent, refined, and, best of all, hospitable people it has been my good fortune to meet in the Santa Clara valley. I also found by experience that their bank accounts showed a prosperous condition of their affairs, which you may be assured is likewise very gratifying to the traveling agent.

The firm of Boyce & Topham, Milpitas, is one of the most enterprising and prosperous in the valley. Besides doing a large amount of manufacturing of wagons and general farming machinery, they make a special business of the manufacture of the popular gang plow "American Chief." Mr. Topham also finds time to devote to the rearing of fine horses and other stock. One two-year-old, Nutwood and Hambletonian, which he showed me, he refused \$1000 for at 11 months old.

Rob Welsh, sometimes called Robert for short, is a jolly old timer and takes delight in good horseflesh, too, and is able to show some imported stock that is hard to beat.

Wm. Boots, a resident of the valley for 35 years, showed me a number of high-bred animals with fine records, some of which are undergoing training for the ribbon. Mr. Boots is the proprietor of a 640 acre homestead in a high state of culture. He has a fine orchard, is the heaviest shipper of asparagus in the State, and a few years ago held a like rank in the strawberry business.

At the stock ranch of D. J. Murphy may be seen some specimens of the horse family that are worth looking at, one of which he lately purchased from Senator Rose of Los Angeles for \$7500.

Among those to whom I beg to make especial acknowledgment for favors while in the neighborhood of Milpitas is Thos. Russell, proprietor of a good 300-acre farm. The fact that he began as a renter, paying in 10 years \$17,500 for the use of the land, supported and educated a large family, paid for his farm, and has to-day a bank account standing in his favor, should be sufficient evidence that not only is the land productive, but the further fact that Mr. Russell is a model of industry, and possessed of more than ordinary business management.

One of the most beautiful sights I beheld in this neighborhood was the 100-acre almond orchard of W. J. Curtner, at the foothills back of town. I was surprised when told that the trees were but four years old. Their extraordinary size led me to conclude that they were almost double that age. I must, therefore, give Mr. Curtner the credit of devoting to them extraordinary care and culture to have produced such gratifying results. The trees bore a light crop last year, and, to all appearances, will produce a bountiful harvest this season.

Later I inspected the large almond orchard of Mrs. Gardner, near Los Gatos, which, until recently, I believe, ranked the largest in the State. It gives promise of a heavy yield this year.

John Calker, president of the Los Gatos Co-operative Winery, is able to show an almond orchard that can't be excelled in the valley.

Until recently but little attention has been given to fruit-growing about Evergreen, grain and stock raising being the chief business. Now, however, many are commencing to plant largely of the tree and the vine. Messrs. Bingham & Edwards, under whose hospitable roof I was sheltered on a stormy night recently, are taking the lead in vine-growing, having about 70 acres planted, and contemplate increasing the area as speedily as is convenient.

Mountain View has also stood back somewhat tardily in the enterprise of fruit-growing until the last few years. Of course there have been for a number of years some engaged in the business more or less extensively, but latterly the people are beginning to realize the importance of engaging more generally in this pleasant and lucrative occupation. They see the success that has attended such men as Mr. Lydiard, who, from an orchard of only 20 acres bearing trees, received \$4000 cash last year, which paid him ten per cent profit on \$1000 per acre, besides allowing him \$1000 extra for his labor. It may be said this is an exceptional case. Granted. But what this man has done, what reason is there for supposing others may not do in his locality, if similarly situated? It can be justly cited as an instance only of the possibilities that await the hand of intelligent and persevering industry in this favored locality, and should act as a stimulus to those who aimlessly plod along in the ruts of an exploded system of farming in other portions of our State, where exist like opportunities.

Santa Clara, March 12, 1888. F. B. L.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

Railroaders and Farmers use no other.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm
better each year, is the problem for the farmer.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KOEBIG—Dear Sir: I have analyzed your sample
of "Nitrogenous Superphosphate," with the
following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85
per cent Ammonia, therefore, total of Nitrogen calcu-
lated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vine-
yards, orchards, gardens, farms, and I recommend its
use by the cultivators of the soil generally, in Cali-
fornia. Yours truly, DR. E. A. SCHNEIDER.

University of California, College of Agri-
culture.

BERKELEY, Nov. 20, 1886.

DR. J. KOEBIG, San Francisco—Dear Sir: I take plea-
sure in adding my testimony to that of Dr. Schneider as
to the high quality of the "Nitrogenous Super-
phosphate" Fertilizer, analyzed by him at your re-
quest. It is a high-grade article, and as such re-
turns the user a better money value than a low-grade

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

fertilizer. It is especially well adapted to use in
California, on account of the predominance in
it of Phosphoric Acid, which is generally in small
supply in our soils. Yet it is desirable that "com-
plete" fertilizers be used in our orchards and vineyards,
and yours is of that character in furnishing
Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large per-
centage it contains of Phosphoric Acid—the chief
element of all plant food—in combination with the
necessary quantities of Potash and Ammonia, and
the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found
sufficient: For Wheat, Barley, Corn and Oats, 300 to 350
pounds per acre. For Grass, Sugar Beets and Vege-
tables, 250 to 300 pounds per acre. For Vines, Fruit
Trees, from 1 pound to 5 pounds each. For Flower Gar-
dens, Lawns, House Plants, etc., a light top dressing,
applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20
miles north of San Francisco, at \$30 per ton, by the
MEXICAN PHOSPHATE & SULPHUR
CO. H. DUTARD, President, room 7, Safe
Deposit Building, or

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in
this short time it has gained a reputation of 'Sure Death,'
equaled by none. By its merits alone, with very little advertis-
ing, it is now used extensively all over the Pacific Coast, as well
as in Australia and New Zealand.

I CURE FITS!

When I say cure I do not mean merely to stop them for
a time and then have them return again. I mean a rad-
ical cure. I have made the disease of FITS, EPILEPSY
or FALLING SICKNESS a life-long study. I warrant
my remedy to cure the worst cases. Because others have
failed is no reason for not now receiving a cure. Send
at once for a treatise and a Free Bottle of my infallible
remedy. Give Express and Post Office.

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 14, 1888.

The past week has been showery, benefiting many sections. Advices report all crops, fruits, cereals, vegetables, etc., as doing well, although backward for the season. Trading in farm products has been fairly active but at easier prices. European and Eastern wheat markets have fluctuated to some extent. The following is to-day's cable:

LIVERPOOL, March 14. Wheat—quiet but steady. California spot lots, 5s 5½d@6s 8½d; off coast, 33s 6d@33s 9d; just shipped, 33s 6d; nearly due, 33s 9d; cargoes off coast, quiet but steady; on passage, not much demand; Mark Lane wheat, few buyers in market; wheat on passage to Continent, 22,000 qrs.; wheat and flour on passage to U. K., 179,200 qrs.; French country markets, slow; wheat and flour in Paris, rather easier.

California Products in Chicago.

CHICAGO, March 10.—The market rules firm for oranges, with a good demand for California Navel; ordinary California do not sell so well. Ruling prices are as follows: California Riverside oranges, \$3@3.50; other kinds, \$2.75@3; Riverside Navel, \$5.50.

In California dried fruit there is only a light trade. Sales are constantly in progress, but they are not of an important kind, being mainly of small lots. The supply is fair, but the fruit is generally in strong hands, and it is steadily held so that no material change can be quoted. We quote: Peaches, sundried, in sacks, ½ lb. 11@12; do, evaporated, unpeeled, in sacks, ½ lb. 13@15; do, boxes, ½ lb. 14@16½; do, peeled, in sacks, ½ lb. 17@22; do, in boxes, ½ lb. 22@25; apricots, sundried, in sacks, ½ lb. 10@11; do, evaporated, in sacks, ½ lb. 12@16; plums, pitted, in sacks, ½ lb. 11½@12½; prunes, small, ½ lb. 8@10; do, fancy large, ½ lb. 13@14; nectarines, according to quality, in sacks, ½ lb. 5@12½; raisins, loose Muscatels, two-crown, ½ box, \$1.45@1.55; do, three-crown, ½ box, \$1.60@1.80; do, London layers, ½ box, \$2.30@2.40.

No material change in the price of beans can be quoted. Holders display some degree of firmness. Sales are, however, rather limited. Foreign beans have come in freely of late and the large buyers are well supplied; some of them, it is said, have got large stocks. In consequence the demand on the open market is rather slack and about all there is doing is in small sacks. The supply of consignment lots is small, and of no regular grade or quality, but sort of mixtures with very choice lots. California beans have about ceased coming this way owing to the advance on the Pacific Coast, so that they cannot very well be laid down here at present rates. California, according to quality, \$2.25@2.85.

In hops there continues to be a moderate movement of good choice grades. No large sales are made, but they are going to brewers as they have no need to purchase. Hops of a common quality do not sell well, but rule dull. The latter are also most plentiful so that they are easy. The market is quotable as follows: Pacific Coast, choice, ½ lb. 12@14; common to prime, 9@12c.

Eastern Wool Markets.

NEW YORK, March 12.—Bradstreet reports the Eastern wool market quiet and a shade weaker. New York and Philadelphia show relatively more strength than Boston. Manufacturers are buying wool as they need it for their machinery, which is at present in general operation on contracts. They are not anticipating further wants to any extent. Selections in some quarters are reported very much broken, but yet there appears to be a sufficient amount of choice wool on hand for all probable requirements. Foreign purchases are believed to have been heavier than last year. At Philadelphia the demand has been light and unsatisfactory, but stocks of domestic fleeces are small and prices well maintained. Tariff uncertainties and backward condition of the goods trade checked business in wool. The week's sales aggregate 521,000 lbs, against 921,000 lbs last week, and 630,000 lbs for the corresponding week last year.

Eastern Grain Markets.

CHICAGO, March 14.—Wheat, easier; cash, 75½c; April, 75½c; May, 79½c. Corn, easy; cash, 47½c; May, 51 9-16c. Oats, steady; May, 31 3-16c. Barley, unchanged.

NEW YORK, March 14.—Wheat, 91½c for May, 90½c for June.

Local Markets.

BAGS—Owing to a continued improvement in crops and several outside holders having sold out, the pool advanced Calcutta bags again. Now holding at 8½@8½ cts., June-July delivery. There are four vessels on the way with bags and bagging, but much of their cargoes are said to be pooled, and the remainder sold to farmers to arrive.

BARLEY—With the advance in overland freights, buyers are offish and bearing the market, even at present low prices. The stock of good to choice in the State is light, while the consumption is good. On Call, futures fluctuated slightly the past week, with the bulk of sales recorded being cross orders so as to keep prices down. To-day's transactions on Call are reported as follows:

Spot—200 tons, 79½c. Buyer season—200 tons, 83½c. Buyer season—100 tons, 91½c @ ctl.

BUTTER—The market has continued easy throughout the week, with some shading in values, so as to place consignments. Receipts are increasing, while the trade buys sparingly under the impression that a lower range of values will obtain.

CHEESE—The market is steady, but the tone is not quite so strong, as freer receipts are expected.

EGGS—Although the consumption has increased, yet free receipts cause prices to rule weak and low.

FLOUR—The market is without change, although a steadier tone is reported.

WHEAT—The sample market is strong at full prices for desirable grades favorably situated. Vessels loading will up slowly owing to the light offering of good to choice shipping. In futures on Call transactions were quite free, but the most of the

sales are said to have been cross orders so as to keep actual wheat down. To-day's sales on Call are reported as follows:

Morning Session: Buyer season—300 tons \$1.38; 100, \$1.37; 100, \$1.37. Afternoon Session: Buyer season—900 tons, \$1.37½; 100, \$1.37½ @ ctl.

(COMMUNICATED.)

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Mar. 12, '87.	July 1, '87 to Mar. 10, '88.
Flour, qr. sks.	3,372,341	2,599,956
Wheat, cts.	10,489,598	6,736,016
Barley, cts.	1,934,840	1,870,360
Oats, cts.	115,466	142,096
Potatoes, sks.	698,702	879,491
Corn, sks.	73,391	109,714
Rye, sks.	19,658	15,826
Buckwheat, sks.	5,542	2,919
Beans, sks.	401,080	364,581
Bran, sks.	350,853	365,436
Hay, tons.	75,402	87,542
Salt, tons.	18,803	11,940
Wool, bls.	45,347	40,135
Hides, No.	76,951	74,805
Raisins, 20-lb boxes.	135,595	105,490
Quicksilver, flasks.	12,888	22,180
Hops, bls.	12,806	14,742

The receipts of certain articles of produce from Oregon, Washington Territory and other distant points, for the same period, compare as follows:

	July 1 '86 to Mar. 12, '87.	July 1, '87 to Mar. 10, '88.
Flour, sks.	109,157	196,095
Wheat, cts.	449,977	808,515
Barley, cts.	5,149	75
Oats, cts.	285,502	177,385
Corn, cts.	78,946	12,590
Wool, bales.	9,063	7,370
Bran, sks.	27,918	51,298
Hops, bales.	754	373
Hides, No.	23,319	23,635
Rye, cts.	3,496	3,496
Potatoes, sks.	72,720	46,949

Cereals.

An English exchange says: The supply of the United Kingdom in the 171 days ended February 18, 1888, has been 103,584,925 bu. of wheat and flour, comprising 37,224,068 bu. from her own wheat production and 66,360,857 bu. from foreign wheat and flour imports. The supply in 171 days has been at the rate of 221,038,290 bu. per annum, against 212,000,000 bu. estimated annual consumption, making the supply 9,038,290 bu. in excess of the consumption. The wheat crop of the United Kingdom in 1887 is officially estimated at 76,224,940 bu., against 63,347,885 bu. in 1886, 79,635,769 bu. in 1885 and 82,066,964 bu. in 1884. The crop of 1887 is 12,877,055 bu. larger than the crop of 1886. The quantity of wheat and flour on passage for the United Kingdom on February 15, 1888, was 11,456,000 bu., against 17,584,000 bu. a year ago, or 6,128,000 less this year than last. The supply in 171 days has been 9,038,290 bu. more than the consumption, adding that much to the reserve stock. Of the 76,224,940 bu. crop of 1887, 37,224,068 bu. have already been delivered, leaving to be delivered 39,000,872 bu. Estimating the annual consumption at 212,000,000 bu., supplies in hand at 103,554,925 bu., remainder of crop to be delivered less seed 33,000,872 bu., on passage 11,456,000 bu., there remain to be purchased in foreign countries and shipped in the 254 days from February 18th to August 31, 1888, 63,988,203 bu. of wheat and flour to supplement supplies already provided for to meet consumptive requirement for the 12 months to end August 31, 1888. The normal stock is about 16,000,000 bu. flour and wheat taken together.

Gross English imports of wheat, 12 months ended December 31, 1887, were equal to 104,139,151 bu., and of wheat flour 18,056,545 cwt., equal to a wheat equivalent of 41,272,104 bu., making the total of flour and wheat together of 145,411,255 bu. The gross imports during 1886 were 47,404,344 cwt., wheat, equal to 88,444,108 bu. of wheat, and 14,739,232 cwt., equal to a wheat equivalent of 33,689,672 bu. of wheat, or a total of wheat and flour equal to 122,177,780 bu. of wheat. The gross imports of wheat in 1885 were 61,498,864 cwt., wheat, equal to 114,797,879 bu. of wheat, and 15,832,843 cwt. of flour, equivalent to 36,180,385 bu. of wheat, being a total wheat and flour of 150,978,264 bu. wheat.

English imports of Indian corn for the calendar year 1887 aggregated 62,246,802 bu., comprising 4,321,152 bu. from the Argentine Confederation, 1,139,074 bu. from Canada, 5860 bu. from Egypt, 33,000 bu. from France, 13,016 bu. from Germany, 1,047,390 bu. from Morocco, 21,830,874 bu. from Roumania, 11,072,176 bu. from Russia, 76,482 bu. from Turkey, 22,440,566 bu. from the United States and 267,412 bu. from other countries.

In its weekly review of the English wheat market, the London Miller, just to hand, says: If Southern Europe has been lately visited by great snowstorms, the English climate has had an exceptional spell of mildness in comparison with many fine winter districts. A high day and night mean temperature, with a soft, moist atmosphere, and on Saturday a copious rainfall, have given a stimulus to the grass and corn lands that was wanted. Generally, crop prospects remain favorable for wheat. Then, as in the past five months foreign and home supplies together have been at the rate of over 28,000,000 qrs. per annum, buyers are fairly warranted in believing future receipts will be quite adequate for all current demand, even if they fall off in their weekly scale for the next couple of months. Of over-supply there need not be much distrust, but many persons suppose that while the supply may be ample, that is not sufficient reason for wheat to remain at its present excessively low value. This latter may be attributed to demoralization of market feeling, which may become healthy again, and thus re-establish prices a little above existing insupportable lowness. Since harvest it is computed that farmers have already delivered, in five months, rather more than they can have to market in the next 7 months, and accordingly this fact ought to influence future business.

At present around every farmer local cheapness is spread; farmers as wheat sellers number less by half in the spring as compared with autumn season, and thus the area becomes contracted, with imports initiating prices instead of the farmers' sample. Nevertheless, what has been already done in the way of depreciating value really extends into the future. The quantity of wheat on passage to the Continent remains very small, in fact only about a fourth of what it was last year. From the Atlantic ports the weekly shipments to the Continent are now very small, and it is some weeks since California shipped anything with a Continental destination. Odessa is the only present shipper to the Continent of any importance. The Argentine Republic and India make, in racing parlance, a very bad second. Taking India as a whole, the wheat prospects appear to be rather under average to "fair" over 12,000,000 acres, and over average—or at least up to a full promise—over 14,000,000 acres.

Eastern advices are far from satisfactory so far as wheat crop prospects go, for the tenor of private advices are that the plant, taking all the States as a whole, is not up to last year at this date. Some reports say that the outlook now is that there is a great difference in the prospects for the late sown wheat, and this season this will cut a much more important figure in the crop than usual, for the reason that a very large percentage of the crop was sown late. The reports from Indiana, Michigan, Ohio and Illinois state that the late sown wheat is very backward and poor in condition; last year the above-named States yielded in round numbers 132,000,000 bushels of wheat, and they are the most important portion of the winter wheat belt.

Oregon advices report that the land on which the wheat plant was killed by the cold weather has been reseeded, but being sown late the seeding cannot be relied upon to give a full crop. At Portland, Oregon, the market is quoted as follows: "Wheat is very steady and quotable at \$1.22½ f. o. b. for Walla Walla, and \$1.27½ for Valley."

In this State crop advices continue of the most favorable character. The plant, as a rule, has not made so large a growth as usual at this season of the year, but the early sown in the majority of fields is well stood and has strong roots.

The wheat market for choice grades has ruled strong throughout the week, with offerings very light owing to the light supply in the State. Poor to fair wheat was weak, owing to buyers bidding down.

In barley the market is quiet, but there is a strong tone at the low prices notwithstanding buyers are bearing the market. Choice grades of brewing, Chevalier and feed are not offering freely, but poor to fair continue to press the market. The demand for feed keeps free. It is now believed that several counties which exported freely "overdid the business" and consequently will have to import before the season closes so as to meet the consumptive demand. The advance in overland freights has checked shipments of brewing to the East.

Oats are strong at a slight advance, due to the light supply in Oregon to draw from, the light stock here and a fair but steady consumptive call.

In corn, under free receipts the market is temporarily weak, but holders of choice are not pressing the market, as they hold to the opinion that better prices will obtain.

Free receipts of rye caused prices to shade off, but at the close the market has a steadier tone. Buckwheat is steady at quotations.

Feedstuff.

The market for ground feed has continued steady, with a good demand for ground barley, middlings and bran. Quotations are unchanged.

In hay, for the season deliveries are good. From all advices obtainable, it is quite certain that the supply of wheat and oats hay will be exhausted by the commencement of a new season, and as it is quite certain that grass will dry up soon in a number of sections, the consumption next season will be very large. The consumption now is very heavy.

Vegetables.

Frosts two nights the past week put garden truck back in the colder sections around the bay.

Free receipts of potatoes from Oregon and liberal receipts of Californian caused buyers to hold off and bid down, causing a lower range of values to obtain, as sellers, in order to effect sales and meet extra expenses, were compelled to accept the lower bids of buyers. New potatoes come in sparingly.

Onions fluctuated slightly the past week, the prices being governed by the receipts and demand.

Tomatoes are higher, owing to light receipts, as are cucumbers. Green peppers are in better supply, as is asparagus. The consumption of the latter is very heavy.

In cabbages and root vegetables, there is nothing new to report.

Fruits.

Dried fruits are in good demand in a jobbing way for shipping to points in Montana, Idaho, Nevada, Arizona and Colorado. Dried plums are about exhausted, and by the end of the season other varieties will be about cleaned up.

In raisins, there are no layers to be had, while choice loose are very scarce. Loose are stronger, with a slight advance obtainable.

It is now generally conceded that between the high price of tin, high price of lumber and the advance in overland freights, fruit-growers will be almost "skinned." The high price of tin will tell against the canned fruit industry, while the high price of lumber, about twice as high, owing to a lumber trust in this city controlling the market, will cause boxes to sell at about twice as much more than last year, which will tell against dried fruits, canned fruits and raisins, while the advance in freights is against everything.

Apples are slow, as the quality even of the choice is not good.

Common oranges are in liberal supply, and sell lower, but for choice, there being a good demand, the market holds strong. The call is both locally and shipping up North. Advices from the orange-growing sections report free shipments to the East.

Live-Stock.

The market for bullocks is easier, but not quotable lower. Offerings are free, with the quality generally good. In mutton sheep the market is weaker, with some concessions necessary to effect sales. The quality continues to improve. For milch cows there is a fair inquiry, but buyers are not disposed to bid up, and sellers are not willing to let go except at full asking price. In calves there is nothing new

to report. In horses there is a good demand for those of general utility, driving animals, matched teams and single-footers. Good-sized draft horses meet with ready sales, but small-sized and otherwise inferior are slow of sale.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed, and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grain-fed, 6¼@6½c per lb.; dressed 9@10c per lb.; soft, 5¼@5½c per lb.; dressed, 7@10c per lb. Stock hogs, 3¼@5½c per lb. BEEF—Stall-fed, 8c per lb.; grass-fed, extra, 7½@—per lb.; first quality, 7c@—per lb.; second quality, 6½@—per lb.; third quality, 5@6c per lb.

VEAL—Choice, 12¼@15c per lb.; fair to good, 8@10c per lb.

MUTTON—Wethers, 9@10c per lb.; ewes, 9@9½c per lb.; lamb-spring, 15@17½c per lb.

Miscellaneous.

Poultry ruled strong and high throughout the week, owing to light receipts and a good demand.

Game held to last week's high prices, as the demand has been in excess of receipts.

Beans are very strong, held at full figures. The East imports very few choice, that now in stock being poor to fair.

Hops are without change. The peculiar manner in which brewers use adulterants has lessened the consumption. The stock here is irregular and generally poor.

In wools there is nothing doing, owing to poor assortments. Private advices report the finer grades of clothing and delaine at the East slightly higher and strong at the advance.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	374,180	201,440
In port, disengaged.....	61,180	124,927
In port, engaged.....	32,504	16,370

Totals..... 467,864 342,737

To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, March 14, 1888.

Fruits and Vegetables

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

The Wool-Growers' Petition.

Blank forms of a petition to Congress on the subject of the wool tariff have been sent to this State for signatures by Hon. C. Delano, president of the National Wool-Growers' Association. The following is the heading of the petition:

To the Honorable the Senate and House of Representatives of the United States:

The undersigned citizens of the county of _____ and State of _____ respectfully petition your honorable body for speedy action on the subject of protection to the wool-growing and woolen manufacturing industries of this country. They represent that the changes made by the Act of Congress of March 3, 1883, reducing protection to these industries, have already resulted in great injury to the sheep-growing interest, as well as to the manufacturing interests, and, that if continued, must result in the destruction, to a very great extent, of the wool-growing industry in all parts of our country and also largely increase the price of mutton to the consumer. They represent that the number of sheep in the United States in 1883 was 49,237,291 (an increase of 15,453,691 since 1875), and which was reduced to 44,759,314 in 1887, showing a loss of 4,477,977 sheep in four years, while with proper protection the number, at the same ratio of increase, in 1887, would probably have been about 64,000,000. A further effect of this injurious legislation was an enormous increase in importation of foreign wool, both in unmanufactured and manufactured state, especially the latter, to the great loss of our domestic laboring classes, whether employed on farms or in workshops, and yielding an increase in revenue to the Government of about \$4,000,000 per annum at a time when it was not needed.

They therefore ask that the schedule of duties unanimously agreed upon by the representatives of the wool-growers and woolen manufacturers at Washington, on Jan. 14, 1888, may be enacted into a law at an early day, and, pending the passage of such bill, in accordance with the further action of said convention, we urgently request Congress to immediately pass a joint resolution correcting the present erroneous classification of worsteds, by directing that they be classified as woolen cloths.

Columbus Delano, Pres. National Wool-Growers' Association, Wm. Whitman, Pres. National Association of Woolen Manufacturers, E. A. Greene, Pres. Philadelphia Wool Merchants' Association, committee.

The above petition printed on sheets for signatures can be had by addressing J. H. Kirkpatrick, Stockton, Cal.

NOT SWAMP LANDS BUT MEADOW.—Congressman Hermann has submitted to the Secretary of the Interior a protest from a long list of settlers in the Silver Lake country, in Southeastern Oregon, enumerating numerous quarter section tracts of land which they assert are wrongly selected by the State with the consent of the Government agents as swamp land, which is not such in fact, but meadow land, and the most valuable in that valley, and that the moisture thereon is occasioned by brief periodical overflows, which in that dry climate is essential to the successful cultivation of crops, and they represent that the patenting of every tract of these lands expels an actual bona fide settler and taxpayer.

A. T. DEWEY. } Dewey & Co.'s Scientific Press Patent Agency { ESTABLISHED
W. B. EWER. } 1860
GEO. H. STRONG.

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 220 Market St., S. F.

LOGAN STRAWBERRY.

"Tested side by side with over 100 varieties, new and old; proved better than any in all respects. Berries very large and beautiful, and immensely productive. Twenty-three berries grown in 1886 weighed 31 ounces." By special arrangement with the originator, J. H. Haynes, Delphi, Indiana, we were furnished plants in advance of its dissemination, and have sole control of this magnificent variety for the Pacific Coast. Every Strawberry grower should give it a trial. Large selected plants, \$2 per dozen; \$12 per 100. Address,

C. M. SILVA & SON, LINCOLN, CAL.

Our New Catalogue for 1888, mailed free on application, contains description and price of Vegetable, Flower, Grass, Clover, Tree and Field Seeds; Australian Tree and Shrub Seeds; native California Tree and Flower Seeds, Fruit Trees, and many new novelties introduced in Europe and the United States.

OUR MANUAL OF EVERYTHING FOR THE GARDEN

is this season the grandest ever issued, containing three colored plates and superb illustrations of everything that is new, useful and rare in Seeds and Plants, with plain directions of "How to grow them," by PETER HENDERSON. This Manual, which is a book of 140 pages, we mail to any address on receipt of 25 cents (in stamps.) To all so remitting 25 cents for the Manual we will, at the same time, send free by mail, in addition, their choice of any one of the following novelties, the price of either of which is 25 cents:—One packet of the new Green and Gold Watermelon, or one packet of new Succession Cabbage, or one packet of new Zebra Zinnia, or one packet of Butterfly Pansy, or one packet of new Mammoth Verbena, or one plant of the beautiful Moonflower, (see illustration), on the distinct understanding, however, that those ordering will state in what paper they saw this advertisement.

PETER HENDERSON & CO. 35 & 37 Cortlandt St., NEW YORK.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Raising a large proportion of my seed enables me to warrant its freshness and purity, as seen by my Vegetable and Flower Seed Catalogue for 1888, FREE for every son and daughter of Adam. It is liberally illustrated with engravings made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Cory Corn, and a score of other valuable vegetables, I invite the patronage of the public.

THE LUBIN PULVERIZER

—MANUFACTURED BY—

P. P. MAST & CO., Springfield, Ohio.

The above cut shows Pulverizer with Pole reversed to bring Spring Teeth in the rear, and as used where ground is very rough and cloddy.

The Lubin Pulverizer, for Orchard, Vineyard or Field Cultivation, has no equal.

It thoroughly cultivates and pulverizes the soil to a depth of 6 inches, requiring less power and much less time than it can be done with any style or make of harrows and cultivators combined.

Built in two sizes; the 5-foot for two horses, and 8-foot for four horses. Can readily be changed to narrower machines if necessary.

BUCKEYE HOE AND SHOE GRAIN DRILLS,

BUCKEYE SPRING-TOOTH HARROWS AND SEEDERS,

A Fine Shorthorn Cow.

Readers of the *RURAL* who are informed on Shorthorn affairs know, of course, the famous Bow Park establishment at Brantford, Ontario, Canada. Though across the line, the management of Bow Park has always held a good place in the esteem and sympathy of American breeders, and sales from the herd have been widely distributed over the territory of the United States, even to the Pacific Coast. Only recently we saw an account of a shipment of a bull and two cows to Reed & Ladd of Portland, Oregon. The cattle of Bow Park have also occupied prominent places at American State Fairs and cattle shows. The present manager of the herd, Mr. John Hope, has done much to extend the fame of the cattle in this country.

The engraving on this page gives a portrait of an exceedingly handsome animal—Havering Nonpareil 2d, selected in England by Mr. Hope and imported by him in 1885. Havering Nonpareil 2d was calved June 30, 1883, bred by Mrs. McIntosh, Havering Park, Essex; sired by Baron Gwynne 2d (44,350), dam Telamacina 2d, by Telemachus 6th (35,725). In 1884 she won first prize at the Essex show at Saffron, Walden, and first at the Royal show at Shrewsbury. In 1885 she again won first prize at the Essex show, first at the Bath and West of England meeting at Brighton, and first at the Royal show at Preston. In 1886 she was the first prize three-year-old at Toronto and Guelph. She was exhibited at the Iowa and Minnesota State Fairs in September, 1887, as one of the show herd that was so successful and attracted so much attention. At the Iowa State Fair she was placed first, but at the Minnesota Fair, Lady Isabel, one year older, another of the same herd, was given the post of honor.

Havering Nonpareil 2d is a show cow of rare merit, as the above proves, and she is a breeder as well, having dropped a beautiful dark-roan bull calf since the fairs last fall.

CHEMIST WILEY testified before the Senate Committee on Agriculture Saturday that cotton-seed oil is nearly identical in properties with olive oil and equally wholesome.

Land-Grabbing for Wagon-Roads.

It seems rather wonderful with what tenacity grantees cling to land though they do none of the things in consideration of which grants are made. The behavior of railways in this respect is well known. It is one of the hardest undertakings of the Government to get back land, although not a rail has been laid over an aided line within the specified time, or long afterward. Now it seems that grants made

which the President submits, with the recommendation that it may become a law, and with the earnest hope that the opportunity thus presented, to demonstrate a sincere desire to preserve the public domain for settlers, and to frustrate unlawful attempts to appropriate the same, may not be neglected.

IRRIGATION IN NEW MEXICO.—The West Side Canal Company, organized at Albuquerque last week, purposes to bring water on a quarter

The Experiment Stations.

The report of Prof. Hilgard to the Board of Regents concerning the establishment of outlying culture stations is understood to have been generally approved by the board. The report was printed in full in last week's *RURAL*. We understand that the equipment of the stations will proceed as rapidly as advisable after the conditions of donation are complied with. The first station to be formally accepted

is that in Amador county, which lies about midway north and south of the foothill belt, which extends from Fresno to Tehama county. Prof. Hilgard visited the locality last week and selected a location about four miles east of Jackson. The piece of land lies in such a way that it includes slate, granite and gravelly portions, and growths can thus be easily tested on these different soils. The work of cleaning, fencing and plowing the ground will be at once commenced, and the necessary building will be erected as soon as the lumber can be got on the ground.

The Amador people, headed by Senator Caminetti, take great interest in the establishment of the station in their county. They have not hitherto shared in

the distribution of public institutions, and they propose to make this one a credit to the county and to the State, as far as generous provisions for it will go. They propose to erect a shapely building which will be visible from long distances. The water will be abundant and everything will favor growth.

Other parts of the State are now in correspondence with Prof. Hilgard, and it is likely that announcement of final acceptance of other stations will not be long delayed.

BEEF FOR FRANCE.—The Denver Cattle Trust has just closed a contract with the French Government to supply the French army with 150,000 head of beef cattle annually. The cattle will be all range stock. The price has not been made public. Shipments will be made as soon as possible to Chicago, where it is understood they will be slaughtered.

SEVERE storms and destructive freshets have been experienced this week in the northern and eastern portions of Germany.

IMPORTED SHORTHORN COW HAVERING NONPAREIL 2d.

for wagon-roads are much the same. It is telegraphed from Washington that the President has sent a communication to Congress with a great deal of testimony relating to grants of land to the State of Oregon for the construction of wagon-roads. The presentation of the facts by the Secretary, the President says, is the result of an examination which has developed the most unblushing frauds upon the Government, and which, if remaining unchallenged, will divert several hundred thousand acres of land from the public domain and from the reach of honest settlers to those who have attempted to pervert and prostitute the beneficent designs of the Government. The Government sought, by the promise of a generous donation of land, to promote the building of wagon-roads for public convenience, and for the purpose of encouraging settlement upon the public lands. The roads have not yet been built, and yet an attempt is made to claim the lands under a title which depends for its validity entirely upon the construction of these roads. A bill accompanies the communication,

of a million acres which are now practically useless. The canal, whose route has already been surveyed, will be nearly 150 miles in length; starting at the Indian village of San Felipe, following the Rio Grande on the west side of Albuquerque, re-emptying into the river a few miles below Socorro. The directors and officers are among the wealthiest men of the Territory. Judge C. H. Gildersleeve is president; Col. Thomas Smith, vice-president; Col. J. F. Chaves, secretary and treasurer, and P. A. Simpson, general manager.

SHORTHORNS IN NEVADA.—The *Reno Gazette* mentions that E. W. Crutcher of Paradise valley has sold to the Jordan Valley Cattle Co. 18 head of pedigreed Shorthorn cows, which will be placed on the breeding farm of the company in Eden Valley.

THE Yosemite Stage and Turnpike Company has shipped the first installment of 60 head of horses which it recently purchased for the Yosemite passenger traffic.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

"California a Cheat and a Snare."

EDITORS PRESS:—I am in receipt of a private letter from the editor of a leading and popular rural paper published in Illinois, declining to publish a letter I had sent him written in the full flush of my advent into this glorious State, in which I had drawn the truth very mildly, or in other words, I had given the facts exactly as my eyes had seen them, and had not searched for big crops, products, or big stories of any kind. He says:

"We cannot publish your article for the reason that we do not take any stock in the California boom. We believe that no country on earth was ever so much overpraised, and that the bottom will fall out of the boom speedily, and that Eastern men who now go there to engage in farming or fruit-growing will greatly miss it. For this reason alone we could not publish your letter, which praises the country in such extravagant style."

Such was the reply to my kindly letter to an old friend, whose paper I had written many a column for. He is an elderly gentleman, who is well-nigh worn out with work and the fierce climate of Chicago. I had advised him to close out and come here and pass the rest of his days in comfort, but I see from his reply that he does not even believe in this climate as a sanitarium. I answer him as follows:

Dear Friend: Yours of the 12th inst. at hand. I had gathered from your former letter that both yourself and your publisher were down on this State. Now I tell you candidly and positively that you are entirely and completely mistaken. I wrote back so as to have you fully express yourself. This is actually a grand, glorious State. Not because I am here and have fallen in love with it, but simply because it is.

It is true that there are many silly, very silly booms in the State. The few are being cruelly swindled by them, but it is their own fault if they put their trust wholly in the designing, irresponsible land swindler, when there are scores of Boards of Trade and reputable real estate agents to direct them, without charge, where to get good lands in the best of locations and at the lowest prices.

Every word I wrote about this country is the truth, and not overdrawn in the least. I wrote you very kindly, feeling that it was the place for you. For I have seen hundreds of people that were worn out by the fierce climate of the East, who had become a burden to themselves and friends, who have been here for years enjoying health, strength and comfort. Since coming here myself, and you will know I was a confirmed invalid in Illinois, I have gained 15 pounds in weight and greatly in strength and vigor, eat three hearty meals every day and sleep like a log every night, whereas I can hardly recollect a good night's sleep before for 20 years. An Illinois neighbor of mine came here ten weeks ago with an invalid wife and three weakly children; they are now all rosy and hearty. I could give many other examples of the same kind.

As for the crops of the country, the closest scrutiny of the publications of the Boards of Trade and the reputable land agents fail to show me anything overdrawn. And it is a fact that I can produce actual sales from the books of fruit farms and plantations that exceed anything of the kind published.

But, of course, this is not here nor there; if you want nothing about this State for publication, that is your privilege. I can readily find an excuse for your feeling. It was impossible for me to believe the reports of crops grown here, but let us consider. Crops in Illinois have at best only four months in which to grow. During half of that time it is too hot for most crops to do their best. Here they have eight months of most perfect growing weather, neither too hot nor too cold, with soils as rich and deep as soils can be. Then give these crops the one other prime necessity, plenty of water every day and hour of that growing season of eight or nine months—when we consider these facts, then, and not until then, can we believe in such crops as we find reported.

Take Gen. Bidwell's ranch at Chico, for instance, of 30,000 acres, where everything is done and managed in the most perfect manner. Let a man go there this spring and put down everything as weighed and sold, scarcely one man East would believe that the sum total had been grown on the land at the end of the season. One day in June on that ranch would prove to you that even Californians can tell the truth.

The Sacramento valley is 130 miles long and 60 miles wide, with perhaps 20 miles more on either side of foothills, splendid for fruit-growing, with perhaps two thirds of its entire area as good as Gen. Bidwell's ranch, and nearly every acre of this vast area will give these great crops without irrigation.

Then we have the great San Joaquin valley to the south, much larger, that will for the most part beat this with irrigation, and for that purpose water can be had in plenty at a reasonable cost for nearly every portion of it, making crops certain every year. Besides, there are thousands of smaller valleys just as good as these, with millions of acres of foothills left for fruit and mountains for free pasture.

D. B. WIER.

415 Montgomery Street, S. F.

THE APIARY.

California Bee-Farming.

Throughout Southern California, for a distance of 300 miles, the Coast Range of mountains is spotted with little canyons upon whose sides may be found a hundred varieties of wild flowers. Here and there rises an occasional live-oak or a clump of low-growing pines. The body of this living carpet, covering the acclivity of the Temescal range, the San Jacinto mountains and the lower edges of the Sierra Madres, is composed of all the colors of the rainbow and varies with the months and seasons, while heaps of gray old boulders, jutting clumps of sandstone and granite, and masses of chaparral, "grease-wood and mesquite, with their neutral tints, give the eye relief from the too brilliant color surrounding them.

These canyons are the sources of the water supply for the valley vineyards and orchards, and are the homes of the bee-masters of a land literally flowing with honey. The irrepressible conflict between fruit-grower and apiarist has ended in the latter fleeing to the mountains, taking the little busy bees to gather the nectar from the delicious mountain flowers. The orchardist charged that the bees punctured the ripening fruit with their lancet tongues, and while the bee-master knew this to be an error, he had no choice but to go among the hills where fruit-growing is not yet a leading industry.

Bee-farming in California bears little resemblance to the same industry elsewhere, on account of the novel difference in the seasons. Instead of making provision for long and cold winters the bees are able here to gather nectar from New Year's Day to Christmas, and the bee-master takes out honey during eight months of the year. During January, February and March the orange and lemon trees of the valley orchards and the wild acacia and eucalyptus (Australian blue-gum) are all in bloom and furnish a fair quantity of nectar, but the larger part of this is consumed by the bees, and it is not the custom to take this from the hives. The so-called "orange-blossom honey" sometimes seen on the market is not made from orange-blossom nectar at all, and is so labeled with intent to deceive.

Early in February the native sheep grass, alfalfa, furnishes an abundance of bloom which makes a good honey of amber color, but not so good as that made from the black sage which blossoms later in the same month. This sage grows in the lowest valleys and on the side of the mountain ranges in all parts of California, and is the best plant for bees because its nectar gives them heart and vitality at a season when they most need it. The honey made from it is of a fine color and strong body.

Early in June appears the best of all honey-producing plants—the white and silver sages. No flower in the world produces a clearer, white, pure nectar than California silver sage. Eastern white clover and basewood (American linden) are splendid honey-producers, but both are inferior to the silver sage in making an article of delicious flavor, good body, and clear as pure water. These sages bloom usually during the entire month of June, and then comes the wild buckwheat, which has a blossom resembling the cultivated plant, and furnishes a honey of good quality and rich amber color.

Early in July the wild alfalfa appears, and soon after the wild sumac opens its large clusters of creamy-white flowers, and both are exceedingly rich in a delicious nectar. The wild mignonette is in bloom during the same period, and the bees never seem to tire of hovering over its perfumed flowers during their short period of bloom.

The golden-rod throws up its brilliant yellow flower spikes in July and August, and continues in blossom until Christmas. It is similar to the plant of the same name growing in the Eastern States, and is one of the most valuable of California's long list of honey-producing plants.

The list includes nearly 200 plants, but many of them bloom for only a short period, every fortnight showing a new combination of colors on the hillsides. The nectar gathered from all the different flowers is not separated by the bee-master. The aim is only to keep the light, silver sage honey apart from that of darker color made earlier in the season from the alfalfa and black sage, and afterward again from the amber honey of the wild buckwheat, sumac and golden-rod.

The process of preventing the mixing of the honey by the bees is very simple, the bee-master watching the season of the different flavors and taking the honey from the combs as the season progresses.

In February, "swarming" begins in this warm climate, and continues until August. This is simply the old queen leaving the hive with her bees to the younger brood and queen hatched during the few months previous. When the young bees are old enough to take care of themselves, and the old queen finds she has a rival, she leaves the hive followed by all of her colony and alights on any low-growing bush or other object that may be near. The bees cluster around her in a mass, and the bee-master, on the alert for "swarms," removes the hive just vacated to a new stand, takes another hive, previously filled by him with empty comb frames, but having a partly filled comb of unsealed honey in the center, and places this on

the old stand. The simplest method then of removing the "swarm" to the new hive is to sprinkle their wings lightly with water, so they cannot fly, shake them gently off their resting-place into a large-mouthed vessel, cover with a cloth, carry them to the new hive and empty them all in. Finding their queen with them and plenty of empty worker-comb, the bees will nearly always accept their new quarters and go to work.

If there are two young queens in the hive just located, as sometimes happens, one of them must be removed or the bees will kill one and possibly both.

The commonest form of handling honey now is to produce what is known as strained honey, though it is really not strained at all. The old method of crushing the comb and then pressing the mixture through a sieve and cloth to remove impurities and particles of wax, has been abandoned. An extractor is now in use, consisting ordinarily of a sheet-iron tank the size of a half-barrel. In this are six or eight light iron frames, so arranged that each will hold a comb of honey and attached to a common center. This is operated by a handle in the same fashion as a coffee-mill is turned, and the swift motion of the wire frames throws the honey out of the cells by centrifugal force against the inner sides of the extractor, whence it runs to the bottom and is drawn off by a faucet.

The comb frames used are not all of the same size. When comb honey is wanted for the market a small frame is used, one holding about a pound of honey being preferred. When it is intended to extract the honey a long frame is used, as this can be handled just as easily as one holding much less honey.

The ingenuity of man has not yet devised an artificial comb that the bee will fill, though a piece of wax is always fastened to the new frame to be filled with comb honey, thus assisting the bees in starting. As more time is spent by the bees in making the comb than in filling it, there is great economy in extracting the honey, for the same comb can be refilled every 10 days by a strong colony during the best blooming season, and it will last for many years.

California liquid honey, as it leaves the bee-master, is always pure. Sugar, glucose, and all other possible adulterations cost more per pound than the pure honey is worth on the ranch.

During a single year California will send to market more than 2,000,000 pounds of honey, and much of this goes to Europe. It returns to the apiarist from 2½ to 3 cents a pound for liquid honey, and from 7 to 8 cents a pound for comb honey. These prices seem very low, but the capital and labor invested are relatively small. A good swarm of bees, including the hive, can be bought for \$6 to \$8, and in a good season a single swarm of bees will make from 500 to 700 pounds of liquid honey. This is worth \$12 to \$15, and a single apiary often contains 200 stands of bees.

Thirty years ago a swarm of bees could be sold in Southern California for \$100, and good comb honey was retailed at one dollar a pound in Los Angeles.

Very much of the work on a bee ranch can be done by a smart boy or girl, and would include extracting the honey, filling the cans, putting on labels, cutting comb honey for placing in glass jars, making the frames and putting comb foundation on the frames, and much other light work of this character; but the watchful eye and steady hand of the bee-master or bee mistress would be necessary in hiving the swarms, in looking for foul brood and moths, and in examining into the condition of the worker bees and drones.—Fred L. Allen, in *Riverside Press*.

THE VETERINARIAN.

Veterinary Association.

The California State Veterinary Medical Association, whose organization we noted four weeks ago, held a meeting in this city the 13th instant, at the office of the *Breeder and Sportsman*, President Bowhill in the chair.

Drs. McCallum, Maseo, Woodruff, Carpenter, Spencer, and Obrock were admitted to membership.

Dr. Carpenter was elected secretary of the society, and empowered to have the constitution and by-laws printed in pamphlet form.

President Bowhill delivered his inaugural address, from the *Chronicle's* report of which we add some extracts. After referring to the magnitude of the horse and cattle interests of California, he said that there is a lack of protection against contagious or infectious disease, the situation being all the more critical from the fact that the State is overrun with a class of quacks, who plunder the ranchers and scout the scientific methods of qualified practitioners as untenable theories.

He dwelt for some time on the duties and responsibilities of a veterinary surgeon and the principles of equity that should exist among members of the profession.

"If people only knew and realized the sad havoc caused in communities and families by the communication of disease from animals to man, they would not rest until the present deplorable insanitary condition is remedied. This city stands in need of stringent inspection, more especially after the late disclosures of diseased animals being slaughtered for human food. I have myself seen the carcass of a cow

on which tubercles were adherent to the pleura costalis, hanging up dressed at Butchertown, and on inquiry found this animal was an old dairy cow. Is this not a disgrace, more especially as the communicability of tuberculosis from man to animals has been proved beyond a doubt? Now, many a mother has fed her child on milk supplied by a tuberculous cow, resulting in the infant's untimely death, and being the origin of tuberculosis in many a young man or woman.

"The insidiousness of this disease makes it difficult to arouse people to its danger. The milk supply is often tested by public analysis and police inspectors to prevent the adulteration by water, but no effort is made to prove the absence of disease germs in the nutrient fluid which forms the chief diet of infants and invalids."

Milk-consumers, the speaker said, should, in the absence of scientific inspection, refuse to use milk from a cow with a cough, particularly of a chronic nature. Whenever the inspection of animals at the slaughtering-places is not properly carried out by competent persons, both in the living animals immediately before slaughtering and the carcass and internal organs at the time of killing, a percentage of tuberculosis is to be met with which would arouse the most apathetic were it to be known. Hence it is necessary not only that the cattle supplying the milk be free from disease, but that there be no possibility of disease germs (typhoid and scarlet fever particularly) having access to the milk or milk-pans, or water with which it is diluted. This can only be done by inspection of the dairy and its surroundings. Healthy milk should be perfectly opaque, white in color, without deposit or peculiar smell or taste, and should not alter in appearance when boiled.

In conclusion President Bowhill argued that cow-sheds and milk-utensils should be kept scrupulously clean, and that cows should be kept from drinking stagnant or drainage water. He hoped in the near future to see a veterinary college established on the coast, in order that the standard of the profession might be raised and present evils abolished.

POULTRY YARD.

Setting a Hen.

How many little things enter into this subject to make it a success! At least, how many points will be seen by one who has had the charge of hens for a number of years! And the longer one watches the old hen going (yes, in a quiet way) about her family duties, the more one can learn how much there is in an egg shell, and of how much will come out of it with proper care and handling. As it is not so much the fact of the old hen being broody as it is what she brings to maturity, it brings three periods of time before us to deal with, or prepare for a successful hatch: What are they?

1st. The preparatory stage, or the time before the old hen is ready to devote her time to rearing a family. Too many think this period of too little account, and they pay dear for their thoughts. But let us see what is or may be done beforehand to help in a good hatch:

First, what kind of stock shall be bred from? With that point decided, then, are they in every way in good condition to produce fertile eggs for incubation? To produce eggs for incubation with the best outlook for fertility, the hens should be fully over the molt, in good health (never use a sick bird for breeding), neither too fat nor too lean; good feed in the shape of some grain, meat and green feed in moderate quantities, bones and oyster shells crushed; hens, as far as possible, two or three years old, and if pullets are wanted, put with every 10 to 15 hens a young rooster, say from 10 to 15 months old, making some allowance for the different breeds, but get good, vigorous stock if you expect strong chicks.

Have a place fixed already for Mrs. Biddy when she has the fever, for she has a natural fever when she wants to set. Have a nest by itself, where other hens will not trouble her. Have a box set on the ground with two or three inches of sand or light loam filled in, and rounded out in the center just enough to bring the eggs together. Have several of the boxes ready, and while at the business get some little coops for the little chicks; it is so much better to be all ready than a little behind. Get the lice killed off for good.

It will be well to remember at this time that as the early broods are the most profitable ones reared in the whole year, they will need some special care, and I find that one great help is to have a large place where, in the cold or during the storms, the little coops can be taken in, and the little chicks find plenty of room to run and scratch, where it is both warm and dry. It is a thing one must provide, but use your own judgment according to your circumstances. Perhaps I have said a good deal in this first part, but so much depends on a good start that perhaps I will be pardoned.

Now for the second stage: When you find a hen sitting on the nest at night, make up your mind that there is business ahead. Let her have her own way for 24 hours, then, after dark, move her in as quiet a way as possible to the nest in which you wish her to continue her labors; have a few glass eggs in the nest; then try her for a day or two, and if she proves true, then give her the eggs to work with. Now, the egg question is one on which doctors

disagree, so I will give my experience for what it is worth, knowing that what I now state is worth a fair trial. Discard all eggs that seem to have very thin shells and that have any irregularities in the shell, for they will not hatch; waste no time with them. Pick out good, medium-sized eggs, neither the largest nor the small ones. You may pick, if you want to, the round points for pullets and the long ones for roosters, but you will hit it only by chance in that way; this rule of our grandmothers is not conclusive. I have given a better rule to go by for pullets; reverse it for roosters; for both, divide the difference, or have breeding stock about of an age. I can fix the quantity of sex in chicks better by my breeding stock than I can by picking eggs. True, every egg will not bring either pullet or rooster, but the main part will be what I aim for. If you wish eggs of any color, pick such for setting. Pick eggs from your best layers or from your most desirable birds.

The number of eggs for a hen is a great point to decide. Thirteen eggs are sold for a setting, but there are only a few hens that will cover them and bring out a good per cent of chicks. You can put more under a fat hen than a moderately fat one; more under a hen in warm weather than in cool. For a medium-sized hen in cool weather I often put but nine eggs; if the weather is warm I venture 11 average-sized eggs. One must learn by experience how to judge for him or herself in this matter. I find it a good plan to put the eggs under the hen at or about dusk. If other hens are liable to trouble her, cover the box so that the other hens will keep out, but don't keep all the air out, too; and then see that she is let out every day to get feed, water and a dust bath. Feed corn, with now and then some other feed for a change; remember she must keep up heat by what she eats to do good work. After ten days, look through the eggs toward a strong light and take out all that look clear like a fresh egg; they will not hatch, and are better out than in the nest.

Set two hens at the same time, if possible, so that if the hatch proves poor you can give the chicks to one hen and reset the other. If the hatch of the two amounts to over 15 chicks, divide the chicks between them and let them go, for the chicks will be the quicker to mature with only a few in the brood; it is a fact that a hen will force a brood of six to eight chicks to their own scratching much quicker than if she has 15 or more to scratch for.

Have nest-boxes on the ground for moisture's sake, if the weather is dry and warm. For the last two weeks sprinkle the eggs twice a week; sprinkle the last time two days before the eggs are due to hatch—it will help the little fellows to get out.

Perhaps I might say, before I go to the third point, that it is well to put eggs under a hen as near of an age as possible, as eggs laid within the same 48 hours will hatch nearly at the same time; the older and newer eggs will only make the more difference in the hatch, the older eggs taking longer to come out of the shell. Another thing, have the old hen come off the day before the chicks are due, and see that she has a good square meal of corn, so that she will stay with the nest well while hatching; it may make a difference of several chicks in the brood.

Now let us try the third point: Don't trouble the little chicks for at least 24 hours; better wait 36 hours before taking them off the nest. I like to take off the brood in the morning (say 8 or 9 o'clock), after the morning dew or damp is out of the way, and then watch how the little fellows will revel in the sunshine and fresh-turned earth. If you wish to feed the little chicks hard-boiled eggs as soon as in the coop, see that the old hen first has her crop filled with corn, or the hen will eat her fill of egg and the chicks get little of it, or else it will take several eggs for that first feed. I think that it may do to feed egg for a first feed or two, and then once or twice a week afterward for perhaps two months as a change in diet, but as a regular food it is neither natural nor good; in fact, it is almost sure death; it will bring on bowel troubles, which are fatal, and of which so many complain of having with young chicks.

I have found that little chicks will do better on dry feed than wet; in fact, I make much of grain, corn excluded almost wholly. I often crack in a coffee-mill some wheat for the first few days, now and then a feed of oatmeal. Oftentimes it is a good thing to buy broken crackers at the stores or at a cracker factory; it costs but little, and when broken fine the crumbs are relished by the chicks. Stale bread or corn bread, broken fine, is also good and often quite handy to feed. Milk in almost any shape, and at any time in the life of a chick, is good feed and drink.

Keep water before chicks at all times in clean shallow dishes; they are not fools enough to drink when there is no need of it.

Study to have variety in the food. A neck-bone fresh from the butcher's, laid before them to pick at, will help them grow, and afford you much fun if you will but watch them a few moments, which it is well to do.

Now, in conclusion: Don't forget to keep the coops clean and sweet, and dishes for food and water; cleanliness means much in the whole race of chickenhood. I have not said all that could be said by any means, for it can be made a long story. I have said enough to start with, and it is well to learn by experience, and while I have spun rather a long lot of it, I don't wish to rob any one of the privilege of learning for themselves.—E. C. Clapp, Pasadena, Cal., in the Cackler.

THE DAIRY.

The Oregon Dairymen.

The quarterly meeting of the North Pacific Dairy Association was held in Portland March 9th. The president, T. Paulsen (whom many of our readers, no doubt, met during his visit to this State as a member of the American Horticultural Society), delivered the following address:

Once more those of us who believe in the value and importance of co-operation and the benefits arising to any industry from organized efforts to further the interest that its members are engaged in, have met here to discuss and consult concerning the dairy interest and matters connected therewith. It is to be regretted that so few of our dairy farmers seem to understand the importance of discussion and consultation among men who are engaged in the same vocation, and the many advantages to be derived therefrom.

Co-operation in Dairying.

Since the beginning of the year seven new creameries have been started and three cheese factories. The average price of butter produced in the creameries now in operation on the North Pacific Coast has been at least five cents above the price realized for good farm butter, and fully as high as the best fancy (private) dairy butter. This of itself would return to the farmer who joins in a co-operative dairy enterprise the cost of manufacture, which in no instance has been over five cents per pound, and in some instances even less. There are now 15 creameries in actual operation. Many farmers seem to think that it would be preferable to sell the milk or cream instead of running the creamery on a co-operative basis, but they forget that all that any man can pay is what the butter and cheese will bring, less the cost of manufacture, and that when a man buys the milk or cream he is sure to fix the price thereof so as to allow him a liberal margin; and even should he promise more than a subsequent market price of butter or cheese would justify, he would soon be compelled to close up his factory. This has occurred in many instances in Illinois and Iowa, and entailed on the patrons of the creamery so closed not only a loss for money due for milk or cream furnished, but also great expense and trouble in disposing of milk suddenly left on their hands without proper means to manufacture it into butter or cheese themselves.

Therefore the best plan for the dairy farmers is, without doubt, to co-operate in establishing their creamery and then hire a competent manager at a stated price per pound of product, disposing of the butter or cheese themselves, or through an authorized agent.

Two creameries in our county (Washington) are carried on this way, and have, as far as I know, given complete satisfaction.

While visiting California I was informed by Mr. Wickson of San Francisco that no co-operative creamery exists in that State, but that the large dairy farms there are usually carried on by renters. Many of these dairies are quite large, and run several cream separators. During the season that we have to feed heavily they rely principally on grass as food for their cows.

Improvement in Dairy Stock.

The importance of grading up our dairy stock should be duly considered by our farmers. There is no excuse for raising scrub stock any more, as the price of a full-bred male is now so reasonable that even a comparatively poor man can procure one. The bull is half the herd, and a full-bred animal of some established dairy breed should be used. Do not be tempted to use a grade bull; he may look just as well, but the power to transmit and impress his good qualities to his offspring is far inferior to a full-bred animal. Using a grade bull, when a full-bred can be procured, is false economy.

Food for Dairy Cows.

Last summer was an exceptionally dry one, and many of our dairy farmers suffered serious loss from scarcity of green and succulent food for their cows. This is wholly unnecessary, for by proper management a full supply of green food can be obtained from spring till late in the fall. Rye sowed early in rich ground, clover and sweet corn, can be so planted and managed as to secure plenty of green food until November at least.

In the East, especially in Wisconsin, the preservation of food by means of the silo has many advocates, and judging from reports made by prominent dairy farmers at the Wisconsin farm institutes, seems to be very profitable to the Wisconsin dairy farmer. Whether it would be as profitable to us is of course a question that cannot be answered positively, but I believe it would be well to make experiments on a small scale in this direction. This should really be done by our State Agricultural college, but unfortunately this has been so far only an agricultural college in name, and will always remain so unless the laws governing its management are radically changed.

Silos.

The silo and its adaptability to the wants of the North Pacific Coast dairy farmer was taken under consideration and elicited remarks and suggestions from several members present, Mr. Knapp declaring his intention to build a silo this summer.

Mr. Hogan called the attention of the society

to the fact that quite often butter not belonging to the owner of marked butter boxes was sold out of such boxes, and asked what should be done to prevent such fraud. The general opinion seemed to be that it would be necessary to register a brand to obtain redress.

Adulteration of food of all kinds was discussed at some length, and especially attention was called to the gross adulteration of lard.

The meeting then adjourned to meet again on Friday, June 8th.

THE STABLE.

Entries for the State Fair.

The following entries in the trotting-colt sweepstakes for the State Fair races of 1888 were received by Secretary Smith. The entries for these stakes closed on Thursday, March 15th:

For the Two-Year-Old Stake.

H. L. Hoppin & Bro., Yolo, name b. c. General Logan, by Alex. Button, dam Winnie. Charles Thornquest, Oakland, names b. c. Cupid, by Sidney, dam Venus.

John P. Sweeney, Carson City, names b. c. Gibber, by Gibraltar, dam Sooner, by Breckenridge.

G. H. Miller, Stockton, names b. f. Jessie May, by Elector, dam Phoebe Drew.

Palo Alto Stock Farm names br. f. Palo Alto Belle, by Electioneer, dam Beautiful Bells; same, br. f. Norlaine, by Norval, dam Elaine, by Mess Duroc; same, b. f. Sunol, by Electioneer, dam Waxana, by General Benton; same, b. c. Coin, by Electioneer, dam Cecil, by General Benton; same, br. c. Comoner, by Electioneer, dam Mollie Cobb, by General Benton.

L. U. Shippee, Stockton, names b. c. Kilrain, by Hawthorne, dam by Whipple's Hambletonian; same, b. c. Motion, by Electioneer, dam by Clark's Chief.

C. R. Hoppin, Yolo, names b. f. Yola, by Cubit, dam Molly, by Dietz St. Clair.

William Corbitt, San Mateo, names br. f. —, by Le Grand, dam by Arthurton.

Pleasanton Stock Farm Company, Pleasanton, names b. f. Margaret S., by Director, dam May Day.

Z. E. Simmons, Lexington, Ky., names b. f. Fortuna, by Florida, dam by George Wilkes.

For the Three-Year Old and Under Stake.

Chas. David, San Francisco, names g. c. Collector, by Director, dam Kit.

Jas. Dustin, Oakland, names br. c. Balkan, by Mambrino Wilkes, dam Fanny Fern, by Jack Hawkins.

Palo Alto Stock Farm, names ch. f. Anselma, by Ansel, dam Elaine, by Mess Duroc; same, b. c. Pomona, by Electioneer, dam Pearl, by George Lancaster; same, b. c. Lowell, by Electioneer, dam Lady Lowell, by Shultz's St. Clair; same, b. c. Cedric, by Electioneer, dam Cecil, by General Benton; same, ch. f. Arodi, by Piedmont, dam Arol, by Electioneer; same, b. c. Monteith, by Electioneer, dam Mamie C., by imp. Hercules.

L. U. Shippee, Stockton, names b. c. Moses S., by Hawthorne, dam by McCracken's Black Hawk; same, b. f. Ida May, by Hawthorne, dam by Chieftain.

W. C. Harlan, Winters, names br. f. Dinah, by Prompter, dam Sproul Mare, by The Moor.

James P. Kerr, San Francisco, names b. c. Memo, by Sidney, dam Flirt.

G. W. Woodward, Woodland, names blk. c. Burbank S., by Alex. Button, dam Emogene, by Todhunter's Mambrino.

Wm. Corbitt, San Mateo, names b. g. Grandee, by LeGrand, dam Womice, by Arthurton. Westwood Stock Farm, Visalia, names ch. c. Strathway, by Steinway, dam Countess, by Whipple's Hambletonian.

J. A. Goldsmith, Oakland, names Sister V., by Sidney, dam Nettie Lambert.

Pleasanton Stock Farm Co., Pleasanton, names blk. c. Direct, by Director, dam Echora.

For the Four-Year-Old and Under Stake.

G. H. Miller, Stockton, names b. f. Flora M., by Elector, dam Phoebe Drew.

Palo Alto Stock Farm names b. f. Maiden, by Electioneer, dam May Queen, by Alexander's Norman; same, b. f. Elia, by Electioneer, dam Lady Ellen, by Carr's Mambrino; same, ch. c. Carlisle, by Piedmont, dam Idabell, by Ryedyk's Hambletonian; same, dk. br. c. Electricity, by Electioneer, dam Midnight, by Pilot, Jr.; same, b. f. Meta, by Piedmont, dam Mecca, by Mohawk Chief; same, b. c. Wellington, by Electioneer, dam Waxana, by General Benton.

L. U. Shippee, Stockton, names b. c. John C. Shelly, by Hawthorne, dam by Morgan's Rattler; same, b. c. Moses S. (3), by Hawthorne, dam by McCracken's Black Hawk.

Wm. Corbitt, San Mateo, names b. f. Gina Wilkes, by Guy Wilkes, dam Blanche, by Arthurton.

Valensin Stock Farm, Pleasanton, names blk. c. Shamrock by Buccaneer, dam Fernleaf, by Flaxtail.

DURING 1887 there were shipped to Europe through Canada ports 36,000 mutton sheep. There went from the ports of the United States a hundred thousand, either alive or as dressed meat. The Australian mutton does not command the price in London that does the American.

ARBORICULTURE.

Dr. Gally Writes About Trees, Etc.

EDITORS PRESS:—In your paper of March 10, 1888, I read about how to destroy trees by cutting them down at the right time of season. Then I turn over a few pages (same paper) and read how not to destroy trees, but how to plant and preserve trees.

Your earlier correspondent tells when to cut "evergreen oaks and other evergreens," and I guess he's mostly all right except as to redwoods or sequoia, and I've seen them cut at all seasons and hacked at and hewed at, but never saw one cut to death "so he no more sprout."

It all depends, with the leaf-shedders, somewhat on soil and altitude or nature of climate. Now, in Pajaro valley, which is cool and moist, I have seen willow, sycamore, cottonwood, boxelder, maple and "grub" oak die out from being cut down flat with the ground, or to two or three inches below the surface, in late July or early August. But even that will depend somewhat on the kind of season; if in a late, cold, wet season, you cut a little later.

But, this being a lumber-making county, you can see here where the redwoods have been cut at all seasons and the woods fired often, yet still the redwood, unlike "the aspiring blood of Lancaster," will not sink into the ground. I can at most any time (when it is not awfully dark) exhibit on part of my own land places where the redwoods have been cut down, and abused nearly every way, from 30 years ago, yet the young trees, among the solid black old stumps, are 40 to 50 feet high and 2 to 2½ feet in diameter and now growing rapidly.

This fact (this redwood fact) ought to hint to your subsequent correspondent how some of our California forest is to be replanted and perpetuated.

I do not know much about the *pinus* family, or the *cupressus*, but I think that the *conifera* do not like to live under the knife, saw or ax, though they will bear the pruning shears in moderation.

Taking the whole subject into consideration (which I have not now time to do), I rather agree with your earlier correspondent that our Pacific Coast trees (in California at least) are not easily subdued; but when that correspondent, with somewhat of the curving caper of a jocular bovine, drags into his humorous conclusion my friend the "sapsucker," then I am ready to ask "wha' fo'?" For if a "sapsucker"—which is a *picus*—(not a *Piker*) has ever killed a tree by sucking the sap of that tree I want the person who so states to prove it; but I will not take "heard say" for proof. I say that I never yet saw the bird they call the sapsucker which could *suck*; he may *drink* the water out of knot-holes or other holes in trees. I have followed that bird from tree to tree in my orchard—and I have been an orchardist for about 14 years—and examined the little pits he picks out of the external bark; but those are like little funnels lying down and cannot, therefore, hold fluid.

Now, any one who has ever cut a crack, or bored a hole, in a sugar maple tree, in sap-flowing season, knows that that wound is going weep—to weep.

"Tears, idle tears! I know not what they mean—Tears from the depths of some divine despair."

Yet who ever saw the little woodpecker pits in a tree's bark weeping? The hummingbird is the only dry-land fowl that I ever suspected of sucking, and I'll bet a box of good apples, out of the coming crop, that little hummy can't suck.

Here is the way to settle this sapsucker *sucking*: Let your correspondent kill one of the birds and cut off its head and send that head—fresh—to the editor of the RURAL PRESS with a carefully prepared, written explanation, pointing out how the sapsucker sucks through the little half-holes in the bark of a tree.

Mind, I never say nor said that birds don't drink; no more do I say that your correspondent is a sucker, though I suppose he drinks.

J. W. GALLY.

Pajaro Township, Santa Cruz Co.

[We don't like to get ourselves between the upper and nether millstone on this sapsucker controversy, but we must state that as we understand it the ornithologists do not allow the claim that the "sapsucker" actually "sucks," but admit that he has an appetite for the inner bark or new wood or alburnum or something of that sort; and he has a short bill fit to scoop out some of that. On the other hand, the numerous woodpeckers have long, sharp bills, and they go for grubs. It was argued at San Jose that no grub-struck woodpecker goes along tapping holes regularly and making a cribbage-board of the bark, but he strikes where, by clairvoyancy or otherwise, he knows there is a grub. The point seems to rest upon the form of the bill and not upon any strictly haustellate orifice, so to speak. Will Dr. Gally admit the amended complaint?—Eds. PRESS.]

COLORADO sent 170,000 head of beef cattle to market in 1887, and the average price paid was \$3.15 per 100 pounds.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

[Official Notice.]

Important Meeting of Officers.

All Lecturers and Deputies are requested to meet at the office of the Secretary of the State Grange, 220 Market street, San Francisco, at 10 A. M. Friday, April 6th, together with all officers and Past Masters of the State Grange, and also all other members—brothers and sisters—who feel an interest in the object of the meeting.

This meeting is for a conference concerning matters relating to the Good of the Order, and to devise plans for the future work and progress of the Grange.

Among other subjects to be presented is that of arranging the time of holding picnics in different parts of the State, in such order as to make it convenient for State officers and other speakers and Patrons to visit the same in rotation.

It is hoped that every officer will respond promptly and come prepared with suggestions for the Good of the Order and fully prepared for effective work.

W. L. OVERHISER, Master.
A. T. DEWEY, Secretary.

Subsidies.

H. F. B. contributes to the *Antioch Ledger* a striking article upon subsidies, the greater portion of which we herewith lay before our readers:

The period in the history of our country, in which the General Government distributes, with a lavish prodigality, immense tracts of public lands to aid the construction of numerous railroad corporations, guarantees their bonds, establishes their credit and really gives to them in fee simple lands sufficient to pay for the roads after completion—has undoubtedly passed, never to return, and counties, cities and towns, by a wise provision of the new Constitution, are expressly prohibited from bonding themselves or voting any subsidy to any railroad or any other corporation.

The period, however, for subsidizing every enterprise, from a railroad to a match factory, has not yet passed, but is as vigorously advocated by the general public and newspapers as was the government policy in this respect 25 years ago. The only difference between then and now is that, instead of the General Government, State, county, city or town making the donations, it now comes out of the individual pockets of the public-spirited citizens, who are anxious for the prosperity of the place in which they live and are interested.

If a man is possessed of property worth ordinarily \$10,000, and said property is liable to be doubled in value by the advent of a railroad, he is expected to divide the increase with the railroad company in the way of a donation, or if no subsidy is raised by said gentleman and others, the railroad will try to pass him by and kill his town.

Such has been the history of all railroads, in this State especially, and a shining example of such policy is to be seen any day only a mile south of our town. Although the public is expected to donate liberally to such enterprises because they happen to be fortunate or unfortunate enough to be in a location where the road enhances their possessions, I have yet to hear of a railroad company that ever shared any of its profits among the public who donated their coin to assist in building it. On the contrary, the companies are granted privileges and immunities, by our laws, which are denied private citizens, and to such an extent that at times our county government and even schools have suffered for want of tax moneys due from and unpaid by these corporations, because they see fit not to pay until they are ready.

The entire principle of subsidy is wrong. Business enterprises of all descriptions (including railroads) are entered into by the projectors and proprietors for the express purpose of making money. If there is no expectation of money-making it never will be entered into, but because this business naturally helps some other business is no good reason that it should be subsidized. Manufacturing industries in the whole country are protected from foreign competition—by a wise tariff which protects equally each individual, corporation or firm. That is the only subsidy they should receive. This bidding between the town of A and the town of B for a woolen-mill, or something else, only gives just so much money to some company that does not need it so much as the ones that put it up, and results in the longest pole getting the persimmon—the town that raises the most money to make a rich firm richer gets the mill. This state of

affairs has come to be so common that anywhere and everywhere any enterprise that will add anything to the place in which it locates expects and gets a subsidy. There is but one way to remedy this evil (for evil it is, and nearly as great as existed 25 years ago, only in a different form), which is for the public to require every tub to stand on its own bottom. Subsidize nobody and then no one would expect it. If a business will not pay without donations, it is not a good business to engage in; and if it will not pay, it should neither expect nor receive any other than the good-will, patronage, and business support of the community.

Versus Lottery.

A. H. Bradford, Brownsville, Tenn., in *American Grange Bulletin* says: It is a good sign to see at least one man ready to combat through Congress this giant robber. It has always been with a degree of shame, not to say disgust, to the solid old South, especially those known as Confederates, to see the names of Generals Beauregard and Early paraded at the head of this huge robbing machine, and how unpleasant it is to think of the thousands of weak-minded men who have been ruined by the names of these once honored generals! Alas! how have the mighty fallen!

The bill of Mr. Blount to prevent newspapers containing lottery advertisements from circulating through the mail is a move in the right direction, and it is to be hoped, in the interest of Christianity and the good of the country, this bill will become a law. There will be a fearful fight over it. Like a great cancer this thing has fastened itself on the vitals of society throughout the land, and it cannot be eradicated without a great effort on the part of the law-and-order portion of the law-making representatives. The advertisement sheets have reaped a great harvest from the fields of the ignorant.

No one of moral sense regards the Louisiana lottery otherwise than as a stupendous swindling concern. But the cry will go up from a thousand tongues that censorship is being established over the press by Congress. If, however, this be censorship, we already have it in the law against the transmission of obscene literature through the mails. If the public service is not allowed to be polluted by becoming carrier of vulgar productions, why not decline its prostitution to the uses of gambling concerns? It should be a fixed principle that the Government can never be accessory to the corrupting of its citizens.

It is estimated the bill will be reported on favorably, but will not pass. Now why not everybody opposed to the gambling concern go to work and make our representatives feel that it is their sacred duty to God and man to pass this law, and enable us to at least get in one good lick on the head of the reptile which has so long poisoned the public mind and drained the pockets of the people?

The Debris Cases.

The following paragraph, widely published of late in California papers, has elicited some inquiry as to what it means:

Master in Chancery Houghton has filed the final decree of the Court in the famous North Bloomfield hydraulic mining cases. The bill is dismissed as to the Conley & Gowell Consolidated Mining Co., and the North Bloomfield Mining Co., the Milton Mining & Water Co., the Omega Gold Mining and Ditch Co., the Excelsior Water and Mining Co. B. D. Chadwick, O. D. Campbell, Hannah Conley and Orrin Gowell are perpetually enjoined from dumping mining debris into Yuba river or any of its branches, particularly Deer creek, Sucker Flat creek, Humburg creek and Scotchman creek. They are also forbidden to let others use their water for hydraulic mining, and are ordered to pay \$3107.78. They may at any time petition the Court for a modification of this order.

The *Sutter Farmer* gives an explanation, as follows: This was the original Woodruff-Bloomfield suit, and the decision, of which the above is the substance, was rendered January 7, 1884, by Judge Sawyer in the U. S. Circuit Court for California, the decree being filed a few days after. By the practice of that Court the defendants had two years wherein to appeal to the U. S. Supreme Court. This they did, but not until within a very few days of the expiration of the two years. The appeal papers then went on to Washington, and after the expiration of another year, more or less, the appellant (defendant) withdrew the appeal without trial. The effect of this withdrawal upon the decision was a complete affirmation of the Circuit Court's decision, and accepted as the law and equity by the defendant as well as the plaintiff. Now, after the usual red tape, the papers are returned to the records where they originated, and enrolled as the final act in the drama. The money spoken of, \$3107.78 as costs, was returned to the plaintiff on or about June 16,

1884. No petition, according to the last sentence in the above decree, has been filed, the companies preferring to be their own judge as to the efficacy of their restraining works. It will be seen that continuance, without such a showing to the Court, is in contempt.

"Please Keep it Dark."

Senator Del Valle and his brother, who own the Camulos Rancho, lately shipped a fine lot of oranges and lemons to the California and Oregon Produce Co., 427 Front street, S. F., expecting to realize therefrom about \$600. Instead of this, they received a money-order for \$10.20 and a letter stating that the fruit had been received in bad condition, and brought only \$90, out of which \$60.50 freight, \$12 drayage, \$7.20 commission and ten cents for the money-order had been deducted. It so happened, however, that the Del Valles' suspicions were aroused; detectives Harris and Metzler were employed, and it was soon learned that the whole transaction was a fraud. The C. & O. P. Co. alias W. Solomon & Co. alias A. Zech & Co. were found to have sold the fruit for good prices and pocketed pretty much all the money. Upon discovery they weakened and promptly paid over \$627.10, begging that the thing be kept quiet. The *Ventura Republican* complies with their request by publishing an account of the transaction, and thereby renders the honest producer a service which every lover of square dealing must approve, and every one who has an opportunity should emulate with cheerful promptness.

How Am I Benefitted?

[By Sister S. J. KIDDER, Sec'y of Watsonville Grange.]

A question similar to this was brought up at our last meeting, and on thinking it over it occurred to me that really the question was of vital importance.

It seemed to me that if we derive no benefit, if we are not in some way doing some good or making some improvement, then we are committing a great error, and the sooner we realize this fact the better for all.

Surely in this age of facilities for improvement, we have no time to spend unprofitably.

Perhaps a brief synopsis of the opportunities which we might improve would remind us that they are sometimes passed unheeded.

If we take cognizance of our ritualistic work, and take to ourselves the beautiful lessons contained therein, we have—unconsciously it may be—acquired some good and possibly some knowledge.

In the office of lecturer we have been highly favored. We have listened to many communications the simple reading of which, to say nothing of the sentiments which are always educational, will amply repay the listener for the short time spent here.

The public exercises and entertainments in which we have participated cannot fail to add their share to our improvement. Every paragraph which we commit, every sentence which we write, and every impression which we receive, is a part of our education.

All who have had the privilege of attending the State Grange affirm that the knowledge and pleasure gained in that week amply repays them for the year's work and expense of the Subordinate Grange.

And what shall I say of the social element? To me this is the crowning feature, for here we meet twice in a month those whom we might not otherwise see in a year's time. Here we have formed acquaintances and doubt not lifelong friendships, which otherwise would never have been formed. If we are deriving no benefit from any of these opportunities, the question arises, "What shall we do? Where lies the difficulty? Are we doing ourselves and each other justice to engage in that which brings no reward?"

Let us ponder it well and seek a reply to the question, "How am I benefitted?"

DEBATING THE TARIFF.—W. S. Cunningham of Lemoore and A. F. Jewett of Hanford lately met before a Tulare county literary society in discussing the question: "Resolved, that the tariff tax works an injustice to the farmer, mechanic and laborer of America." A local paper says that Mr. Cunningham, the acknowledged champion of free trade in those parts, spoke for one hour in the affirmative to a very attentive house, and Mr. Jewett followed for one-half hour only, in defense of the protective system, and was loudly applauded.

THE Worthy Master has appointed Sister A. P. Roache Deputy Lecturer for Santa Cruz county and Bro. T. T. Hooper for Solano county.

San Jose Grange.

EDITORS PRESS:—Our Grange met in open session on the 17th inst. to discuss "Prison Discipline and Prison Labor," Bro. H. Pomeroy presiding. Bros. Webb and Alley read papers upon the three general systems of prison discipline, which are now engaging the attention of the world, viz.: The congregate silent system, the separate-cell system, and the system of progressive classification. Bros. Woodhams, Coats and Gilman of Minneapolis and Sisters Watkins and Sheldon took part in the discussion; all favoring progressive, reformatory and humanitarian measures to ameliorate the condition of prison life, and with a view of restoring the convict to a condition that shall make him a useful citizen when he shall have been released. Sisters Woodhams and Jennie Sanders read two fine poems upon subjects pertinent to the matter under discussion. Mrs. Eitel favored the meeting with a song.

San Jose, March 17.

YELLAFO.

Worthy Master Overhiser received a letter from San Jose Grange some time since asking him to visit them and give them a little waking up. The Worthy Master has appointed April 7th as the day of meeting, hoping to induce quite a number of Patrons, who will be in San Francisco attending the meeting of the Deputies to accompany him. They can leave San Francisco on the morning train so as to meet with the Grange at 10 A. M. The Worthy Master says he has notified them he will be there in the morning, and expects to have with him Bros. Johnston, Coulter, Chandler, Steele, Flint, Frisbie, Dewey, Davis, and as many others as he can prevail upon to go. He says: "Now, brothers, let us give them a rousing stirring up."

Sacramento Grange.

EDITORS PRESS:—Last Saturday was field day in Sacramento Grange. The subject for discussion was:

Resolved, That we are opposed to any reduction of the tariff that will affect (detrimentally) the industries of California.

Some of our members thought that, as it pertained to the tariff, it became a political question and not a proper subject for discussion in the Grange. Some evidently thought there was not politics enough in it, judging by the tenor of the amendment that was offered, while others were heartily in favor of discussing the resolution as read. And as the several brothers eloquently presented their views, and persistently maintained them, we had a lively and interesting meeting. It was just such a discussion as demonstrated the need of the Grange for the education and experience that the farmers require, and it was gratifying to notice the advanced position of some of our young brothers, with amendments to questions, points of order, and parliamentary law; thus showing that they are not only competent workmen in the field, but are able debaters in the forum.

GEO. W. HACK.

THE LUXURY OF "LAWING."—Two old farmers in Alameda county, whose lands adjoin, have lately been indulging in a lawsuit. A. made a road on his land which dammed a waterway and caused water to back on to B's land. Each refused to build a culvert under the road, which would allow the water to pass away freely. The cost of the culvert would have been about \$20, but each thought it was the other's duty to construct it, and both being stubborn, they brought their grievances into court. But one day in court settled it with them. The farmers became weary. The prospect was that the trial would last for several days to come. When the testimony was being taken the court was informed that the farmers had enough law and had agreed upon a settlement. The case was accordingly dismissed, with the understanding that each shall pay his own costs, and B. shall dig a ditch under the roadway on A's land, and the latter shall construct the culvert and keep it in repair. It has just cost these farmers \$250 each to settle a \$20 matter in a court of justice.

THE REGULAR MEETING of the Executive Committee of the California State Grange is hereby called to meet at the office of the Secretary, 220 Market street, San Francisco, at one P. M. on Friday, the 6th day of April, for the transaction of such business as may be brought before it relating to the interests of the Order.

WORTHY MASTER OVERHISER wishes us to state that all members of the Order—both brothers and sisters—are cordially invited to be present at the meeting of deputies April 6th. See the official notice in another column, which has been changed this week, and made to read as all would liked to have it.

FORESTRY.

Destruction of Forest Trees by Fungi.

Dr. H. W. Harkness, in a communication to the *Placer Republican*, says:

I am sorry to see that one of your most beautiful forest trees, *Pinus Sabiniana*, is dying in great numbers. This destruction is due to the presence of a fungus which is acting upon the branches and thus depriving the terminal twigs and foliage of necessary sustenance. The fungus is a *peridermium*, and was first found by J. P. Moore and myself about 10 years since upon the *Pinus ponderosa*, or pitch pine, in the vicinity of Colfax. In that locality only the young trees are attacked, and but few are killed. I might also note the fact that the *Pinus insignis* of Monterey is suffering from a like cause. Mr. Moore named the fungus *Peridermium Harknessii*. This specific name "Harknessii," however, will not in my opinion be retained, as it differs but slightly, if at all, from *Peridermium pinii* of the Eastern States and Europe.

The fungus first makes its appearance beneath the cambium layer of the bark, gradually separating it from the wood. New material, however, is deposited to replace that which has been destroyed, and in this manner the unsightly bulbous expansions of the branches are formed. The branch so attacked soon dies from a lack of nutriment, and if a considerable number of branches suffer, the tree dies from a like cause. At the present time, March 12th, the fungus is beginning to make its presence felt. By making a section of one of the affected branches at the point where a bursa appears, the fungus may be detected between the bark and the wood as a layer of bright orange color. In a short period this permeates the bark and appears upon the surface, where it may be readily detected by its color. As before stated, the constant irritation of the fungus leads to an abnormal thickening of the cambium with an increase of wood at the point of attack.

While this parasite has been under my observation for several years, it is only within a year or two that it has exhibited any signs of producing serious damage to the forests. In 1886 two or three trees were observed which were suffering from its effects. During the year following a few had died, while this year the dead may be numbered by hundreds. The destruction of so many of these trees must be a source of regret to the lovers of forest scenery, as this pine is one of the most beautiful of its family. The tree, so symmetrical in itself, is clothed with long and tender foliage of an olive-green tint, in delightful contrast to that of other species. It has been said of this tree that wherever its roots penetrate gold may be found.

In no place has this tree appeared to flourish so well as in the vicinity of Auburn, and its presence in the forest gives a distinctive character to the landscape. We have as yet discovered no means of arresting this pest, and it will doubtless run its course unchecked. However, it may finally cease its ravages before these trees of our forests are exterminated.

The Stock Show at Livermore.

The yearly show of stallions and other stock came off duly at Livermore on Saturday, the 10th inst. The *Herald* thinks that the rainy time just preceding interfered seriously with the exhibition, entries and attendance, and even avers that the uncertainty regarding the weather, which prevailed until the day before the advertised date, kept away fully three-fourths of both stock and people. Nevertheless there were as many entries as at any previous exhibition and the town was well filled with people. The procession showed more general stock than usual and fewer stallions; the Livermore band was at its best, the decisions of the judges gave very general satisfaction, and the affair may well be pronounced a success.

Premiums were awarded as follows:

Horses.

THOROUGHBREDS—First prize, Wallie Mendenhall's Mamie T; 2d, Wm. Gregory's Lucy.

TROTTERS—First, Martin Mendenhall's Grand Moor; 2d, John Frick's Jack Nelson. Best stallion from San Joaquin county, Conroy's Whalebone. Two-year-olds—1st, P. C. Waltenbaugh's Pearl; 2d, Dr. Savage's Quen Sabe; 3d, Mendenhall's Eva.

ROADSTERS—First, J. C. Smith's Anteo, Jr.; 2d, John Frick's Plow Boy; 3d, Wm. Gregory's Ted. Fillies, same class—1st, J. L. Mitchell's Edna M.; 2d, W. P. Bartlett's Midnight.

HORSES OF ALL WORK—First, C. G. Munch's Spy, Jr.; 2d, Christenson's Harry Granger; 3d, C. G. Munch's Canadian Spy.

NORMANS—First, D. Lafranz's Adolph; 2d, W. Mendenhall's Mont Durham. Two-year-olds—Jos. Blondin's Livermore King.

GRADED NORMANS—First, Chris Anderson's Eugene, Jr.; 2d, Berry's Colonel Whallen.

CLYDESDALES—First, M. Dolan's Chief; 2d, A. Nufer's Waxworks.

STALLION WITH BEST THREE COLTS—D. Lafranz's Adolph.

DOUBLE TEAM (mare and colt)—Vandervoort's Mikado and Mignonette.

Jack's.

FIRST, Hamilton's Big Tom; 2d, P. C. Waltenbaugh's Henry Ward Beecher; 3d, Taylor's Moses.

Cattle.

DURHAMS—Best bull, J. C. Martin's Ben. Cow—

M. Nevin's Pet. Graded Durham Cow—Charles Genger's Becky.

JERSEYS—N. D. Dutcher's bull, Hudson Jr. and cows Beauty, Daisy and Belle.

HOLSTEIN BULL—J. W. Clark's Don Juan.

BEST HAY PRESS—Aylward's Model.

Stallions at San Jose.

The exhibition of stallions, given at San Jose Fair-Grounds last Saturday afternoon, March 17th, under the management of the Santa Clara Valley Agricultural Society, drew a crowd and was a pronounced success as to both the number and the character of animals arrayed. The day was beautiful, and everything went off well.

At 2 o'clock Pres. Topham ordered the line to be formed, and the animals passed the judges' stand in the following order: thoroughbreds, roadsters, thoroughbred drafts and graded drafts.

Many of the best stallions in the county were not brought, their books for the season being already full, and consequently are not included in the appended list of those which were in the parade, viz.: Bob Wooding, by Hercules; owned by Wm. Boots; 12 years old. Soudan, by Sultan, D. J. Murphy; 4 years old, roadster. Wilmington, by Fallis; 5 years old; D. C. Gould. Col. Benton, by General Benton; 4 years old; Thos. Gould. Thornhill, inbred Wilkes draft from Ky.; James Boyd. Ario, by Florida; same owner. Bismarck, by Index; 13 years old; John Gordon. Pat, by Grosvenor; 2 years old; E. Topham. C. W. S., by Abbottsford; 5 years old; John Gordon. Dick Patchen, by Tom Patchen; 10 years old; D. J. Murphy. Rustie, by Whipple's Hambletonian; 17 years old; P. J. Shafter. Longfellow, by Buford; 4 years old; Dr. Dudley. Monte —, by Kerr's Membrino; T. Bostwick. Eros, by Electioneer; 8 years old; Burke & Voyget; (Eros was followed by three of his colts; one yearling; the others 2 years old.) Ormond, by Alden Goldsmith; 3 years old; J. Gilliam. Baywood, by Nutwood; 9 years old; E. S. Smith. Stranger, by Gus; 8 years old; T. W. Barstow; (followed by 10 of his colts.) Orion, by Elmo; 8 years old; J. R. Weller. Wopsey, by Wopsey; 4 years old; Charles Worthington. General Taylor, Jr., by Gen. Taylor; 7 years old; Blaine & Frost. May Boy, by St. John; 5 years old; J. Dempsey. Nutwood Boy, by Nutwood; 9 years old; J. O. Buffington; (followed by 9 of his colts.) Woodnut, by Nutwood; 9 years old; J. Weatherhead. Middleton, by Bob Wooding; 6 years old; R. F. Kennedy. Hollywood, by Woodnut; James Weatherhead (followed by six colts). Archer, by Sterling; R. Walton. Morgan Chief, by Hazard's Morgan; 10 years old; John Crites. Santa Clara Sultan, by Sultan; inbred; 3 years old; John Scott. Magic, by Nemo; 1 year old; Knox & Johnson. Designer, by Director; 5 years old; L. Johnson. Geo. Washington Jr., by Washington; 4 years old; Chas. Shafer. Magic, by Patchen; 2 years old; James Gregg. Major, by Dexter; 4 years old; Mr. Johnson. Mountain View. Young Signal, by Signal; 10 years old; O. P. Baxter. Chieftain, by Noyes Chieftain; 11 years old; J. R. Russell. Duke of Edinburgh; (bay carriage horse), imported; C. L. Fox. Prince Albert; (draft); 7 years old; D. J. Murphy of Milpitas. Montezuma, (Norman and Clydesdale); 3 years old; G. P. Bull. Grant; (Norman and Black Sampson); 2 years old; Simon Matthews. Suffolk Punch, (imported); 4 years old; James Boyd. Emperor, by Adolf; 5 years old; H. C. Murphy of Milpitas. Los Gatos Chief, (Clydesdale); 4 years old; Rob't Walker. Doble, by John Taylor's Norman; 6 years old; E. Meginnis. Rockton, by Norman; 9 years old; C. F. Overfelt. May Duke, by Norman; 8 years old; C. F. Overfelt. Mazeppa, by Blake's English horse; 4 years old; E. Britton. Sampson Jr., by Sampson; 4 years old; J. B. Messersmith. Marengo, by Adolph; 3 years old; J. Swope. Oregon Chief, by a Norman; 9 years old; L. H. Johns. Orio, (Hambletonian and Norman); 4 years old; J. Guignon. Royal Jim, by Murphy's Norman; 5 years old; J. Casey. Keno, from Norman; 5 years old; A. E. Wright. Col. Whalen, from Norman and Black Hawk; 8 years old; W. F. Downing's estate. Frank B., by Belmont; 3 years old; J. C. Bullard.

The object of the display being to give breeders an opportunity to see the stallions in the county, it was made a free show, admitting horses of all ages. There were no awards of either money or medals, as it was simply a voluntary exhibition by owners of well-bred horses.

OSTRICHES FOR TEHAMA.—It is reported from Red Bluff that Dr. Sketchley has just bought about 250 acres of land, five miles north of that town, on the Sacramento river, and will at once proceed to move his ostriches up there from the Los Angeles ranch, which he has sold recently. He says he will put a boat on the Sacramento river and run excursions this summer from Sacramento and Red Bluff to his farm. The news makes quite a stir at Red Bluff.

MR. S. N. STRAUBE of the Poplar Grove Breeding Farm, Fresno, has purchased quite a herd of the Polled Angus cattle lately brought to this coast by A. B. Matthews from Kansas City, and will dispose of several young bulls to parties desirous of propagating this grand breed. Mr. Straube's advertisement appears in this week's RURAL.

PORTLAND MECHANICS' FAIR is to op n October 4th and continue to the 27th inclus ve.

PUBLIC AFFAIRS.

The Railway Strike.

EDITORS PRESS:—What does the demonstration of the Brotherhood of Engineers indicate? What its results on the body politic?

It scarcely seems to require a prophet or the son of a prophet to foretell the result foreshadowed by an organization who have it in their power to obstruct, demoralize, and defeat the operation of every religious, moral, social, agricultural and mechanical enterprise, either upon the land, lakes, or rivers, or upon the high seas. Legislative council seemingly is powerless to enact laws to meet the emergency, although by the wisdom of our law-makers, enactments are attempted to be enforced to regulate charges of the common carrier, and by virtue of the declaration of an interstate commission the courts hold the common carrier responsible for the safe delivery of merchandise entrusted to his care, with damage annexed in case of failure. Can the law in equity be made to act equally upon principal and agent, according to the responsibility they have assumed? The Brotherhood by their declarations intimate that they hold the trump cards, and to enforce this idea they adopt the boycott theory, and through their officials visit the same penalty upon an unoffending party as upon the party with whom they hold an unsettled grievance. Unsettled for the simple reason that principal and agent fail to agree in the mode and amount of compensation for service rendered. Admitting the theory and practice of the Brotherhood, what is the status of all financial enterprise? What will it be in the future? Capital, always timid, will fail to invest in any enterprise where labor, by the declaration of its acknowledged dictator, can decree a suspension at a day's notice. With the assumption of prudential reasons, based upon present experience, will the capitalist jeopardize his capital with the chance of gain as uncertain as the caprice of a non-corporate body, yet controlled by a dictator whose word is law and from which there is no appeal or safeguard either in law or equity?

Admitting that the Brotherhood have a grievance, does the end desired justify the means used? Does it not smack largely of the socialistic theory? Its leaders most assuredly assume to-day a command not possessed by any judicial, executive or military officer of the United States, and, if not in defiance of law, the power thus assumed virtually thwarts its enforcement in equity by reason of its non-corporate existence and by reason of no legal enactment to cope with an organization the workings of which have not been fully known except as demonstrated in foreign lands and by dictation of foreign influence. If an influence to demoralize all the social and financial interests of the nation is without a remedy, whither are we drifting? Wherein is foreshadowed relief to the laboring class, either present or prospective, by the adoption of a coercive policy?

INQUIRER.

Citrus Fruits Scarce at the East.

The announcement comes by telegraph just as we are going to press that wholesale prices of oranges and lemons in New York have advanced 50 cents per box within the past week and \$1 a box within a month, due to the scarcity of fruit in that market. The quantity arriving has fallen off from 100,000 boxes to 40,000 boxes per month. The reduced shipment is not due to any failure of the crops abroad, but to the action of the New York bankers in declining to make satisfactory advances on fruit. The Florida crop has all been marketed, and the West Indian supply is a very small portion of the quantity received. Italian and Spanish growers all demand cash advances on their fruit, and in some cases they obtain money before the crop is gathered; but most of the advances are made on certified bills of lading. From 75 cents to \$1 per box is the usual advance, but the bankers of New York City have sustained such heavy losses that they are now refusing to take such risks.

We hope the Spanish growers will continue to call for large advances. The prospect is, however, before the game now being played between foreign and American growers of citrus fruits is over, the foreigners, if they want this market, will not be so stiff in their terms. If Congress will let the tariff alone, we shall not long have need of Spanish fruit of any kind.

A PERMANENT EXHIBITION IN SACRAMENTO.—The Improvement Association of Sacramento is doing an enterprising thing in the erection of a building adjoining the passenger depot in Sacramento, for the purpose of making a continuous exhibit of the products of Central and Northern California; also, to serve as a bureau of information as to the counties of Central and Northern California. They intend to have a competent person in charge, whose duty it shall be to meet the visitors, answer questions and impart such information as may be desired. The outside counties are only asked to contribute exhibits and printed matter. The display, it is expected, will be formally opened with proper ceremonies about April 1st.

News in Brief.

THEY are using crude petroleum as fuel burning bricks at Pasadena.

ONE day last week there were landed at New York 2262 immigrants, most of whom are bound West.

A MEMORIAL to Congress has been prepared, urging the necessity of a quarantine station at this port.

THE wire cable for the new Powell-street line in this city is 26,680 feet long and weighs 48,590 pounds.

RIVERSIDE is likely to have a motor road to Colton, before long, connecting with the line to San Bernardino.

SEVERE earthquakes have been experienced in Yunnan, China, and at one place some 4000 people were killed.

THE House Committee on Territories has decided to report the bill for the organization of the Territory of Alaska.

THE U. S. Supreme Court has rendered a decision in the telephone case, giving a verdict in favor of the Bell patent.

ARRANGEMENTS have been made looking to the establishment of a line of freight ships between Australia and Portland direct.

THE Ontario Land & Colony Co. celebrated the fifth anniversary of the inaugural improvements of their colony on the 17th inst.

CONGRESS will probably authorize the placing of certain beacon lights at prominent points on the Sacramento and San Joaquin rivers.

SECRETARY BAYARD has recommended the President to appoint Jas. V. Coleman as Chief Commissioner to the Melbourne Exposition.

THE new Hotel del Monte is finished and has over 400 guests, including distinguished people from the Eastern States, Canada and Europe.

AT Urbeta, San Bernardino county, last week, an artesian well at the depth of 175 feet struck water which sends a stream 40 feet in the air.

GORDON HUGHES, an Ohio boy, son of the American Consul at Birmingham, has won, in competition with 52 others, a Cambridge scholarship worth \$2000.

THE Railroad Commissioners are inquiring into the condition of affairs by which the California Southern is charging slightly higher rates of fare than other lines in that part of the State.

THE Board of Trustees announce that the Twenty-third Industrial Exposition of the Mechanics' Institute will open Tuesday, Aug. 7, and will close on Saturday evening, Sept. 15, 1888.

EXPORTS of wine from this port, from January 1st to March 1st, were 938,800 gallons, of an approximate value of \$414,000, against 831,200 gallons valued at \$366,000 in the same time last year.

THE Supervising Architect of Public Buildings at Washington has recommended to the Secretary of the Treasury that \$40,000 be appropriated for the repair of public buildings in San Francisco.

NEVADA local hunters say that the cold wave which swept across Western Nevada last January killed all the rabbits and thinned the ranks of the badgers and coyotes formerly so numerous on the desert.

THE War Department has issued an order for the abandonment of the military reservation at Carlin, Nev. It will be turned over to the Interior Department and steps will be taken for its sale as public land.

SENATOR DOLPH has introduced a bill to authorize the construction of a railway bridge over Clear Water river in Idaho, and for the Navigation Company to build a bridge over Snake river, at Texas Ferry, W. T.

NOT all the immigrants from Europe come to us. There are 21 companies running regular lines of steamships between Buenos Ayres and various European ports. Immigrants are thronging to New Zealand and Australia.

PARTIES visiting the volcano of Popocatepetl recently, report an increasing activity in the crater, with clouds of smoke and sulphurous fumes. Reports from Central America show that several volcanoes are unmistakably in renewed activity.

HORSE-STEALING by a thoroughly organized gang has been going on in Los Angeles county for several months past, and it is estimated that \$100,000 worth of animals have been run away with. The officers of the law have so far been baffled by the thieves, and the sheriff has called police detectives to his assistance.

CONTRACTS were signed by parties in Fresno, and a man has gone to North Carolina to ship to that country 300 negro families. Most of these will replace Chinese in the orchards and vineyards. It is said that the women and children in vineyards do better than Chinamen, while the men in the sweat and drying houses learn the business of curing raisins much better and faster than the Chinese.

DAIRYMEN of Missouri have sent the U. S. Senate a strong petition in favor of removing the duty on foreign salt. The petitioners claim that the tariff does not have the effect of improving the quality of home salt, while the tax falls directly on dairymen who need the best quality of English salt in the manufacture of butter and cheese. It is pointed out that a salt trust prepared by American manufacturers is designed to increase the burden.

Restitution.

Upon her face were lines of pain and doubt,
Love came instead of death and swept them out.
Within her breast raged tempest strong and wild;
Stilled into calm when Love said, "Peace, my child."

Her weary feet by Love were meekly shod
With sandals of the holiness of God.

Her arms drooped nerveless, after their fierce strain;
Love lifted them and they were strong again.

Her ears were deafened with the ruthless cry,
"Vae Victis!" crashing up against the sky.

Sweeter than silence came Love's voice divine:
"Thou shalt arise again, for thou art mine."

Thrilled through the agony of awful fears;
"I will restore the locust-eaten years."

So in Love's light her face transfigured shone,
And she grew very fair to look upon.

O vineyard, wasted once of beasts of prey,
Thou hast put forth thy glorious fruit to-day!

O jewel, flung 'neath trampling feet of swine,
Love's hand has set thee in the crown divine.

Maker, Redeemer, Sanctifier, Thou
Hast signed Thy sign upon her breast and brow;

And every power superb, and each bright grace
Flames in the perfect luster of Thy face.

—Macmillan's Magazine.

The Dearest Verse.

[Written for the RURAL PRESS by MAID-OF-ALL-WORK.]

It is one of the dearest verses, at least I think
of it as often as any other out of the human
selfishness of my heart, no doubt. I say it over
and over when care lies heavy or hope is bright.
You all love the verse, too:

"In my Father's house are many mansions; if it
were not so I would have told you."

If it was not so, He said, He would tell us.
Disappointment is so hard to bear that He felt
it best to tell us if it could not be so. Heaven's
embassador knew the human longing for rest,
peace and home. He, with exquisite sensibilities
too keen for us to define, lived His allotted
years without an earthly resting-place. The birds
of the air had nests, the foxes had holes, but the
Son of Man had no place to call His own where
He might hide himself from the cruelties of the
rabble, the weariness of His care and the mistakes
of His friends. His burden was always with Him,
and He had no door to shut against His penury
and loneliness. A home in a walled city meant
protection from His enemies, but He could only
flee to the wilderness for rest and peace; yet
with what a divine sympathy for the selfish human
heart He remembered to say to the home-makers
of earth: "In my Father's house are many mansions."

A mansion—a place of permanence, of comfort,
of durability, and of beauty; a place of our own,
replete with all things satisfying to the soul;
a place where we may treasure untroubled and
unseen our joys and profits, and hide away in a
sacredness that becomes sweet the ashes of our
perished hopes. A very small cottage may be a
mansion in that it covers contentment and great
hopes and noble efforts, reasonably constrained
under the habits of a kindly and modest life.
Anyway, it seems to me, a roof all one's own, a
hedged garden, and a fenced field can become to
any one a starting point from which we can measure
the world and its possibilities, or a treasure-house
after weary triumphs. Moreover, the preciousness
of what homes are to our people justifies the
adulation of this promise of our Lord to its greatest
glory. I reflect upon the cause and precedent
of such a promise.

Was there not rightfully given to the human
heart a desire for beautiful or perfect homes, and
because this desire is so seldom satisfied, the
Prince of Peace hastened to say, "In my Father's
house are many mansions."

If we must struggle for a perfect heart and a
clear conscience on account of our spiritual
necessities, we can as righteously struggle for a
clear and perfect home as a foretaste, perchance,
of that place of many mansions.

A roof all one's own: Only those who have
never enjoyed such a luxury know what it is to
be deprived of it—to be without anchorage and
foothold in the many storms of life. Let us divide
such a roof in fancy into apartments fulfilling
the necessities of our natures.

A long, spacious room, with broad windows
and a fair outlook filled with sunshine and music
and the perfume of a few choice blossoms. A
bright, open fire, with a generous space about
it and a generous heat. Many easy-chairs
ingeniously placed for warmth, light and comfort.
Nothing superfluous in the room, nothing frail
to fall over or break; nothing garish or inconvenient,
nothing out of use or suggestive of a storehouse
or museum.

A wide hall, warm and quiet, rich in color,

stored with books, the walls lined with closets,
cases and cabinets. A place for all the curios
and mementoes of mountain and seaside outings;
and studies in botany and mineralogy that any
one could make and prepare on mountain
journeys. Antlers from that rare old day in the
mountain-brush, shells from the sea, moss and
ferns from the woods.

A magical guest-chamber or two, which, like
the widow's cruse of oil, would expand with
unselfish use, which would open their arms of
welcome to curtains and sliding-screens and
extra couches, and never, never, give sigh or
groan for one too many.

"One's own room," fresh and airy, warm and
light and dry, with a cheerful little stove in it,
a lounge, a singing-bird in the window, one's
own desk, and pictures, and secret drawers.

A jolly little dining-room well furnished with
hospitality, with no aroma of fret, or worry, or
care in it. A wonderful little kitchen decorated
with a fret-work of sunshine through vines,
clean as a whistle, and capable of producing
something hot and nourishing on a few moments'
notice.

What more do you want under a roof of your
own? You might have a suite of drawing-
rooms sumptuously furnished, guest-rooms like
an inn, a book-store for a library, and a compli-
cated culinary department with a retinue of
servants, but it would be just the same, after
all, provided you have the same spirit of content-
ment and cordiality in it, such as I would
like to put in such a humble place as that.

Then there is economy and prudence. No
roof is one's own roof at all unless the income
under that roof is more than its outgo. Go back
to the Bible dinner of herbs and an oaten cake
and sup with an easy mind if you would have
this own roof a mansion of comfort.

A hedged garden: Not a few gaudy plots
placed in front for exhibition to the envious,
but a gathering of our favorite fragrant and
blossoming plants all about the house, so that
one place shall be as lovely and bright as
another. Not a moneyed patronage of a green-
house or a skilled gardener, but a garden full
of living and growing testimonials of pleasant
visits and the remembrances of friends; a bit of
sweet mint from grandmother, a root of violets
from Aunt Ruth, a rose from Japan brought by
a learned traveler; seed from the old ancestral
garden in the East. This honeysuckle is from
Uncle John's cabin in the mines, this moss-rose
from Mrs. G.—sweet lady, she is dead. This
lily I bought to commemorate my baby's birth-
day. How luxuriantly it grows this year; there
are new bulbs. This fuchsia my mother
brought all the way from home in her hand
bag—there were no cars then. This sweet
tea-rose! Do you remember Mary Lynn? I
took this slip from her grave in the mountains.
This smilax, how it does grow all over every-
thing! When Rose was married her mother
gave me the bulbs. My strawberries, my
brother Tom helped me to plant them before
he went to the theological school. These
straggling currant bushes pay for themselves
over and over.

Can anything be sweeter than these buds of
violets about my kitchen door? Whenever I
go to the city I carry a basket full to Sister
Francis Mary for her hospital work. To the
convent? No matter, I want to do it. This is
my palace and I am queen here. Yes, I let
the hedges grow high so that I can walk and
think and soliloquize all about my garden un-
seen. No one cares for it as I do.

A fenced field: If it be large, it will be
blessed according to its worth; if it be small,
according to its care. Yes, we have the whole
six acres in now—three acres in fruit and the
rest in alfalfa. The orchard is entirely cared
for us on shares by a fruit-handler, packing and
all; small, to be sure, but enough for us. That
wheat along the fences I sowed for my chick-
ens; they harvest it and the garden worms as
well. The alfalfa is no trouble at all, the cow
harvests it. The milk and eggs come to our
table in every conceivable form, which is about
as sensible as to sell them to buy something we
don't like half as well. We call the alfalfa our
living, and more, it is always beautiful. Those
five splendid oak trees are fenced apart by
themselves because I love them and what grows
under them, the mushrooms.

My sister Amy's husband has 1000 acres in
wheat every year; they are prosperous, but so
far away, and not so happy as I. Their faces are
growing more set and careworn every year.

It was a friend who stood chatting after this
manner—she so blithe and fresh and glad with
her "own roof, her hedged garden and her
fenced field." All her words sank into my
heart and I thought it a good sermon for all
my friends, many of whom are striving to be
rich, but not to be comfortable. There were
many shut up in dark stores whom I would
like to present with such a mansion within easy
distance of their precious (?) counters. There
were others fretted and changed about from
place to place, failing, stumbling, wearied and
harassed, whom I would joy to lead into such
a mansion and name it their own.

A roof of one's own, a hedged garden and a
fenced field—something to toil for, to hope for,
to wearily wait for, something to almost place
our eager hands upon and then have it fade
away into the sad realms of disappointment,
and to be glad even then for the hope that re-
maineth. But if the snows of life should
whiten your head and your understanding
should fail before you enter into such a beau-
tiful estate, be glad and calm still, for "In the
Father's house are many mansions; if it were
not so He would have told us."

A Remarkable Woman Gone.

Many readers doubtless enjoyed her graphic
sketch, "Christmas Among the Blizzards," in
our "Home Circle" just three months ago,
and have been interested in other articles over
the signature of PIONEER, which have graced our
columns from time to time for several years,
without knowing the real name of the writer.
She was Mrs. Ellen S. Tupper, who died sud-
denly March 10th at El Paso, where she was
visiting one of her children, Mrs. H. A. True.
She had put on her bonnet that Saturday eve-
ning to take a walk with her daughter: the
latter left the room for a few moments, and re-
turned to find her mother just expiring.

Mrs. Tupper had led a varied and busy life,
and was indeed a remarkable woman. She is,
perhaps, most famous in the world for what
she learned, accomplished and wrote respect-
ing insects, particularly honey-bees, while resi-
dent in Iowa. In King's *New Bee Keepers' Text-Book*, we read:

Mrs. Ellen S. Tupper has most satisfactorily
proven that women may successfully follow this busi-
ness. With great industry and perseverance she
maintained and educated her large family mainly by
bee-keeping. A close observer and pithy writer, she
has done much to attract attention to this industry.
At one time her apiary was destroyed by a hurri-
cane. A few years afterward her house was burned
in winter, which involved the loss of all her bees, as
they were wintering in the cellar. Other troubles
thickened around her, but she is recovering physi-
cally, mentally and pecuniarily. She has again gathered
an apiary, and with a woman's perseverance
amid trials, comes forward again with her pen to
help the cause she loves. It was Mrs. Tupper who
first announced success in artificial fertilization of
queens. Though pronounced impossible, her state-
ment is verified by recent experiments.

She was a valued contributor to the *N. Y. Tribune* during Horace Greeley's lifetime, and
has in later years written much for the *Youth's Companion* and the *Oregonian*. In private life
she was bright, wise, sweet, industrious—"a
high-souled woman, and a tender and thought-
ful friend."

As to facts of time and place—she was a
New Englander born and bred, Providence,
R. I., being her native town, and much of
her early life having been spent in Calais,
Maine, where her father, Noah Smith, was a
man of considerable note in politics. She mar-
ried Allen Tupper of Bangor, and they lived
awhile in Newton, Mass., before going out to
what was then the Western frontier and set-
tling at Brighton, Iowa.

She was the mother of 11 children, of whom
five—four daughters and a son—survive her.
They are Mrs. E. Tupper Wilkes, an ordained
liberal preacher, wife of a prominent lawyer at
Sioux Falls, Dakota; Miss Kate N., vice-prin-
cipal of the high-school at Portland, Oregon;
Margaret, Mrs. True, at whose home in El Paso
she breathed her last; Holmes, a farmer near
Sioux Falls; and Mila, a student of high prom-
ise at Cornell University in the class of 1889.

At the time of her death Mrs. Tupper had
nearly completed her 66th year. She had but
lately arrived from Portland, Oregon, stopping
on her way at San Francisco, where we had
the pleasure of passing two or three social
evenings with her, and was expecting to remain
at El Paso until summer and then go back to
see her other children in Dakota—whither her
remains were sent to be buried beside those of
her husband.

Rights of Animals.

Of late years there have been many laws en-
acted and many societies organized for the pre-
vention of cruelty to animals; but we think
that farmers, as a general rule, seldom need to
have such laws applied to them. A truly good
and humane farmer cares for his live-stock in a
proper manner. Every living thing, wrote the
late Rev. A. J. Baird, D. D., as well as every
field and everything it produces, has its rights
and use. Study to know, and act accordingly,
and you will be repaid. That man's field is
fat and productive, because its master feeds it
well. It seems to rejoice at his approach, and
spread out its rich green carpets for him to
walk on, and holds up its sweet blossoms to
perfume his atmosphere. It loves the flocks
that graze upon it, because they belong to the
same master, and it feeds them well. It seems
to take pride in making the strong reaper bow
to the heavy swath, and the wagon groan be-
neath its heavy yellow sheaves. It glories in
its rights and is glad. That field over there is
poor, and looks discouraged. No wonder. It
has been badly dealt with. It has a hard master.
He scratches, robs and starves his field. Look
at its bruised face. God gives it rain and sun-
shine, but it wants food. It wants a good mas-
ter, who will give it what rightfully belongs to
it. If you wish to know the nature of a farm-
er, walk with him out among his stock. If
they know him, and come to him, and trust
him, you may do so, for he will respect your
rights; but if they run from him, something is
wrong. That is their way of warning you that
he is a hard master. If you wish to know a
woman, her pets, from the canary in its prison
to the chickens in the yard, will tell the truth
more certainly than the smiles of her beautiful
face. The one is an every-day matter, the other
for company. This may not always be so.
Some are afraid of fowls. They cluck, look au-

gry and peck, and their bite is by some thought to
be very poisonous; and what an inglorious death
it would be to die from the bite of a hen! It is
much more safe and genteel for husband to
buy them. Ruler of the world, prove your
high station by living witnesses. You can-
not make a world, but you can take good care
of the one that was made for you. If you
would enjoy ease, comfort, plenty and a good
conscience, begin at once and become a faith-
ful student in this school of universal rights.
You will soon have a higher regard for the God
who made you, and you will be happy within
your wide realm of power, and be beloved by
all within its just domain.—*Atlanta, Ga., Southern Cultivator.*

Unexpected Guests.

Years ago, when I was first married, an old
lady friend gave me some excellent advice in
regard to company. Her family was small
(only herself and husband), yet a person could
never go there for a friendly visit and find her
unprepared. No apologies were ever made,
although things were of the plainest, as the
family were obliged to practice great economy,
their means being limited. But the cordial
welcome and the ease with which a visitor was
entertained made people feel that they never
came at the wrong time. * * * When I
first began to preside over a house of my own,
I thought I would not allow myself to be dis-
turbed if a friend dropped in unexpectedly.
But it took time for me to shake myself out of
the rut in which I had been led for some years.
Some time after my marriage I was talking on
the subject to my elderly friend previously
mentioned. She said: "Company never dis-
turbs me. If rich people come to see me I
know they have things good enough at home.
If poor people come I know I have as good as
they have." This, then, was her secret which,
added to her natural ease of manner, made
young and old always enjoy themselves when
visiting her. As my family cares increased, I
found that if I wished to enjoy life at all I
must often let the morrow take thought for its
own affairs.

If I knew company was coming, of course I had
my meals prepared beforehand, so that I might
have the more time to spend with them; but if
they came unexpectedly, I simply set my table
and made no excuses. I think one of the most
pleasant meals I ever enjoyed was at a time
when I had prepared a dinner for five and had
sent out to the good man to come in and partake
thereof. He sent me in word he would bring
in a gentleman with him. Another plate, knife,
fork, and napkin were put on the table, chairs
were set and we were just about to occupy
them when our family physician walked in
with another gentleman. For just a moment I
will acknowledge I feared there would not be
enough to "go around." But more plates, etc.,
were added. There was plenty of nice bread
and butter in the pantry, part of a sheet of warm
ginger-bread was cut and put on the table. As
we chatted over our dinner and the doctor
brought up reminiscences of his army life, I
doubt if any of us gave a thought to the rapid
disappearance of our "boiled dish." At
another time my husband brought in a gentle-
man to dine who was at the time a stranger to
us both. I noticed he hesitated a moment as
he entered the dining-room; but I did not think
of it again until some time afterward, when he
told me that frequently, when a host invited
him to partake of a meal, he would find he
was not always welcome to the lady of the
house, and he hesitated, fearing I was one of
that kind. He, however, staid long enough to
find out his mistake.

Years ago, on a very warm day in July, a
lady drove to the house of a gentleman to see
him on business. Arriving there, his wife in-
formed her he was away and would not return
until evening, at the same time inviting her to
come in and take tea with her and await his re-
turn. The invitation was accepted. They con-
versed for awhile, and when the proper time
arrived the hostess prepared her simple supper.
Good sweet bread and butter and a cup of fra-
grant tea, that was all, but said the lady after-
ward: "It was the best supper I ever ate."
Agassiz once called on Oken, the great German
naturalist, who invited him to stay to dinner.
There were two dishes—potatoes plain and
potatoes roasted, but so much did Agassiz learn
of the great man that in after-years he wrote:
"Never before were such potatoes grown on
this planet, for the mind of the man seemed to
enter into what we ate, socially together, and I
devoured his intellect while munching his pota-
toes. I repeat it, I never ate such a dinner be-
fore or since." Sisters, depend upon it, our
guests will not think as much of us if we spend
the time they are with us in preparing refresh-
ments for the inner man. Far better is it to
give them a hearty welcome and let them feel
for the time they are members of the family,
and while they remain with us will be used as
such.—*Mrs. L. Howard in Rural New Yorker.*

A COMING APPETITE.—The *Gridley Herald*
spins some remarkable little yarns. One of the
latest is that a rancher, prominent in that
neighborhood, went into a saloon the other
night to get something to eat. After getting
himself outside of five cans of oysters, 32
hard-boiled eggs, 14 glasses of beer and two
pounds of crackers, the grain-grower said he
"guessed he'd go home and get his supper,"
and so departed.

Mr. Crusty on Foreign Musical Training.

[Written for the RURAL PRESS by MARIS.]

One day last week Mr. Crusty was requested by a friend to invest in a ticket for the benefit of a young musician contemplating a trip to Europe to finish her education. He took the ticket in his hand, turned it round and round, finally adjusted his spectacles, and began to read: "Grand Complimentary Benefit to Miss Bella Blank"—finished perusing the card, and handed it back, saying, after a prolonged "hem:" "Don't know her, so of course don't feel bound to contribute to her benefit; but if I did know her I should take an opportunity to acquaint her with my opinion of youngsters packing up and going to Europe to be taught music. Are there not many good teachers here? Why must musicians cross the continent to learn how to sing and play to American people? "And if they went at their own expense, what harm? But generally the music-loving public has to submit to hearing its favorite selections crudely and unintelligently rendered in order that some musical fledgling may fly to Europe and have his or her wings gilded by some super-annuated professor who knows absolutely nothing of the musical tastes of our people. Is there no remedy? Allow me to make a suggestion to the victims of so-called genius. Instead of transporting all our prodigies over the ocean, and paying dear for the veneer which seems necessary (?) to success, why not import a few hoary instructors who have given their best years to the profession of teaching music, and are so wrapped up in their life study that the very air around them seems to be charged with divine harmony? Why not import a few such persons, I say, and pay them a liberal salary to polish off the aspiring recruits in the army of Euterpe? It would at least be much cheaper than fitting out pupils every month or so to spend their time and often other people's money in a foreign school.

"If they must travel, let them complete their studies in the Boston Conservatory of Music, which equals, if it does not surpass, many like institutions in Paris.

"It is a mistake on the part of Americans to ape the fashions, manners, and schools of other countries whose power is on the wane, while America is in the height of her glory, and could, if she would, assume and maintain the lead in these, as well as in other regards.

"The cry from the labor market is 'Patronize home industries;' from the producer, 'Consume home products;' and one which is in the heart, if not on the lips, of many a well-trained but ill-paid professor in our midst is, 'Recognize home talent.' We consider it a duty to listen to the first and second. Let us not turn a deaf ear to the third. We are just as cultured as our continental friends, and it only remains for us to make this fact patent to all by training our future composers and prima donne at home."

Oakland.

Church Fairs Disfavored.

At a recent meeting of the Clerical Association (Episcopal) of Alameda and Contra Costa counties, a committee, to whom had been referred the subject of church fairs, reported the following preamble and resolution, which were adopted by the association:

WHEREAS, The well-known views of a large number of the bishops of our church, including our own diocesan, are opposed to such means of raising money for church purposes and religious objects; and

Whereas, The general sentiment of our clergy and many of our most devoted laity, to say nothing of the repeated adverse opinions of our diocesan convention, is, as we believe, unfavorable to such measures, while the downward tendency toward extreme license in these matters is exceedingly strong in California; therefore, be it

Resolved, That it is the sense of this association that it is inexpedient for our church people to attempt to raise money for building or furnishing churches, or for other religious objects, by means of fairs, carnivals, or the like. And we invite our brethren elsewhere in the diocese to unite with us in discouraging and opposing such methods, committing ourselves hereby against taking any part in them ourselves.

A THRIFTY YOUNG WORKER.—The Woodland Mail says there is in Yolo county a ranch hand who has \$2500 in the Hibernia bank of San Francisco. This money he has saved out of his earnings of the past six years. During this time he has served but one employer who gives him \$500 a year. Every Christmas for the past six years this young man (he is only 30 years old) sends his old mother in Scotland \$100. From these figures, which we are assured are reliable, it would appear that the interest which his savings have drawn have more than supplied his clothes and other living expenses. That is the kind of a man the Mail honors. We have no apology to offer for saying so, either. It is safe to hazard a prediction that his expenses for tobacco and beer are quickly figured up. Ten to one, this thrifty laborer would fill any trust reposed in him with fidelity and courage. The man who freely sets apart for his mother out of his hard-earned and harder-saved savings, as much as this man does, has immeasurably more humanity and decency in his makeup than a whole regiment of that stripe of a loafer who pours down his worthless neck in bad whisky the money he owes his butcher and groceryman.

YOUNG FOLKS' COLUMN.

The Snow-Bird's Lesson.

[Written for the RURAL PRESS by MRS. M. F. ROWE.]

Tiny little snow bird,
Flitting through the air,
Searching for a breakfast
On the branches bare;
Thou dost teach sweet lessons
Of the Father's care.

When the sky is shrouded
With the stormcloud black,
And the snow is falling
On thy hapless back,
'Tis His eye that guides thee
On thy unseen track.

He thy food provided
In the long ago
Of the summer sunshine,
Ere the frost and snow
Brought thee near our dwellings,
Flitting to and fro.

What we feared would injure
Flower and shrub and tree,
In His wondrous wisdom,
He designed should be
Food, rich and abundant,
Little bird, for thee.

If our Father's goodness
Feeds the birds thus,
How much more His loving,
Tender care for us;
Who can trust His wisdom
In whatever He does?

"Fear not," He hath spoken
In His holy Word,
"Ye are of more value
Than the little bird;"
Yet its feeblest crying
Hath your Father heard.

His own eye will guide you
Thro' life's unseen way;
He will still provide you
All things day by day;
No ill shall befall you,
He will keep away.

Grass Valley.

Little Bluebird.

[Written for the RURAL PRESS by AUNT SUSIE.]

What do you suppose this "little bluebird's" real name was? It was Sue, so you see she wasn't a little bird at all, but a blue-eyed little girl. An aunt who loved her very much saw her coming up the walk one day. She wore a blue cashmere "jossie," as a child's cloak was called then, which was a long time ago, but it was just like the cloaks little girls wear now, with a long waist and full skirt and little cape. Well, this little girl also had on a blue velvet bonnet with a high crown and soft, white lace pleated full around the front, and she had on blue stockings, and blue gloves, so when her aunt saw her she called out, "Oh, here comes my dear little Bluebird!" and so the name clung to her, because she looked so pretty in blue. She had blonde hair that was as fine as unspun silk, and looked very pretty hanging down below her blue bonnet in soft, loose curls.

Well, little Bluebird's mamma was dead, and she went to boarding-school when she was only four years old with her big sister, who told her when she had on a fresh white dress not to rumple it when she sat down. Her dresses and skirts were made very full, as was the fashion then, and when fresh from the laundry, looked very pretty. Of course, she was petted by all the big girls in the school, and I am sorry to say, was a little spoiled and rather vain of her pretty clothes, and almost always lifted up her dress, which was very short, when she sat down; but alas! her vanity brought her to grief one night. There was a low stove in her bedroom, and one cold night the fire was hotter than usual; her sister was busy fixing the bed for her, and, without noticing where she was, said: "Now, Bluebird, sit down and take off your shoes and stockings." She was all undressed and had on her little white "nighty," and, without noticing where she stood, and forgetting she didn't have on a fresh stiff dress, pulled up her little "nighty" and sat down, but not on a chair; dear me! if it only had been on a chair; but it wasn't—it was on the low stove, which was red hot on top. She didn't stay there long. With a terrible scream she fell to the floor. She was badly burned and in great pain; her sister lifted her up and sent for a doctor. When he came the tender skin was broken and the poor child was screaming so with pain, he had to give her something to make her sleep, and she had to stay in bed quite a long time. At last the skin was all healed and she could run about again, but she didn't take so much pains to keep her dresses unrumpled.

Well, one day her papa told her she had a new mamma, and so she left the boarding-school with her sister May, who was two years older than she was. The first morning they woke up in the new home they felt very strange and lay awake for some time, wondering if their new mamma would remember them.

May said: "I don't believe she will think of us. She hasn't any little girls, and only saw us just a little while last night when she put us to bed. I guess we will have to stay here a long time and get awful hungry."

"Can't we get up and dress ourselves?" said Sue.

"No," replied May, "we must just stay

here till she comes if it's forever-n-ever;" and so they talked on, not coming to any very happy decision in the matter.

But their new mamma had not forgotten them. When she thought it was time, she went to their room and said: "Well, are my two little girls ready to get up?"

"Yes'm," said May, "we've been ready this long time, and thought you'd forgot we were here, and we'd never have anything to eat."

"Oh, no. I shan't ever forget my little girls."

"Am I your little girl?" asked Sue.

"Yes, and I want you to love me very much."

"I guess I love you now," said Sue, as she threw her arms round her new mamma's neck and gave her a good kiss.

She was an affectionate, impulsive child, and showed just what she felt, but May was more reserved and didn't show any outward tokens for some time of the love she really felt for her new mamma.

They had two cousins named John and Tom, who were almost like brothers to them, as they lived near and were always playing together; of course they teased each other sometimes, as I am sorry to say little boys and girls will. Bluebird was very fond of the "leavings" in the big yellow bowl after her mamma had made cake. She knew Tom didn't like it, but one day when she went in the kitchen and found the big yellow bowl all ready for her to "scrape," as she called it, just for fun she called out: "Say, Tom, come here quick. I've got something awful good."

"What is it?" called Tom, who was playing outside.

"Oh, I shan't tell; if you don't want any I'll eat it all up."

That was too much for Tom. He scrambled in the wood-shed window, as that was the quickest way to reach the kitchen; but dear me! "Haste makes waste;" many times he slipped and fell; he tried to get up but couldn't, so called out:

"O aunt, come quick. I can't get up; my ankle hurts awful bad."

Sue and her mamma ran quick to him, and when his aunt lifted him up, found he had sprained his ankle. It hurt him so much he had to cry, even if he was a boy. Sue called the man who was working in the garden, and he took Tom in his strong arms and carried him home, which fortunately was near by. His mamma felt very bad, but was glad to know it was nothing worse than a sprained ankle. She put him to bed, and he looked so white it scared Bluebird very much. She ran downstairs, went to the parlor and curled herself up on the sofa and cried very hard. Her mamma hunted all about for her, and called out:

"Where has my Bluebird flown to?"

"Here I am, mamma," she heard in a stifled voice, followed the sound, and found a very sad little Bluebird sobbing as if her heart would break. When her mamma tried to comfort her, she said:

"If I hadn't called Tom when I knew he didn't like raw cake, he wouldn't be in bed now, as white as the pillows, the doctor with him, and everything. Oh, dear, I'm so sorry, and I'll never do it again. Oh, dear, oh, dear, what makes folks do naughty things?" and then she began to cry again.

Her aunt came in and comforted her a little, for she knew her Bluebird had not really meant to be naughty; did it "just for fun," so she let Bluebird help nurse Tom, and she loved him all the more after that, and he forgave her, like a good little boy, and they had many a fine romp together after his ankle was well.

One day, when Bluebird was seven years old, she fell asleep in school, with her head on her arm, on her desk; the teacher tried to wake her, but she was so sound asleep she couldn't get her awake. Her cheeks were very red, and her little hands were so hot the teacher knew she must be sick, so had some one take her home. Her mamma put her on the bed and undressed her, but still she didn't wake up. When the doctor came the little cheeks and hands were hotter than ever. He looked very sober as he held the little hot hand and listened to the heavy breathing of the still sleeping child, and told her anxious parents he feared it was scarlet fever. He called again at night, and said it surely was, and they had a very sick little Bluebird for a long time. May, of course, had to be kept away from her, and although she had John and Tom to play with, and stayed at their house, still she missed her little sister. After many days and nights of anxious nursing and watching, the dear little blue eyes looked clear once more, and she was able to sit up in the big chair, with lots of pillows all about her. One day she was sitting up and had on a pretty little loose gown that covered her feet all up, when her aunt came to see her. She said, as she had many times before: "Well, here is my dear little Bluebird."

GERMAN SONGSTERS FOR OREGON.—It is stated that a number of Germans, resident in Portland, Oregon, have made up a fund of \$1000 to defray the expense of bringing over from "the singers' Fatherland" several hundred song birds—nightingales, linnets, thrushes, skylarks, etc.—to be set free in the neighborhood of that city. It is expected that they will arrive at Portland next spring in time to nest and rear young, and that they will return thither from their winter migration to the South. An Act for the protection of these birds will probably be passed by the next Legislature.

DOMESTIC ECONOMY.

CHICKEN PANCAKES.—One pint of fine chopped cold chicken, freed from bones, seasoned with salt, pepper and tomato or mushroom catchup. Pour over the meat one tablespoonful of flour, one tablespoonful of butter, mixed with one-half pint each of water and cold gravy, heated to boiling point; then heat the chicken. For the batter, beat two eggs until light and mix with 1½ cupfuls of sweet milk, two full cups of flour and one teaspoonful of baking powder. Hastily fry pancakes of the desired size to a light brown, spread some of the prepared chicken upon each pancake, fold once, and keep hot until all are ready.

RAGOUT OF BEEF.—Cut one pint of cold meat into one-half inch dice, removing fat, bone and gristle. Put the meat into a stewpan, cover with boiling water and simmer slowly two or three hours; then add one-half can mushrooms, cut fine, two tablespoonfuls wine, salt and pepper to taste. Wet one tablespoonful flour to a smooth paste with a little cold water, stir into the liquor, cook ten minutes and serve.

FRIED BREAD.—One quart of flour, one teaspoonful of salt, three of baking powder, and milk enough to make it as stiff as biscuit dough. Roll it out and cut into square cakes two inches long and a little over half an inch thick. Drop them into boiling lard. They require only a few minutes cooking, and when properly made they are so nice they will soon become a family institution.

BAKED MACARONI.—Take some minced chicken or meat, then weigh half the quantity of macaroni, which must be cooked tender in broth; add two well-beaten eggs, three ounces of butter, cayenne pepper and salt to taste; all these ingredients must be well mixed. Put into a baking dish and cook until a yellowish-brown crust is formed on the top. Veal and chicken can be mixed.

PUFF PASTE WITH BEEF SUET.—Where you cannot obtain good butter for making paste, the following is an excellent substitute: Skin and chop one pound of kidney beef suet very fine, put in a mortar and pound it well, moistening with a little oil, becoming as it were one piece, and about the consistency of butter; proceed exactly as in the last, using it instead of butter.

SHORT PASTE FOR TARTS.—Put a pound of flour upon your pastry slab, with six ounces of butter, and rub them well together; then make a hole in the center, in which put two ounces of powdered sugar, two whole eggs and a large wineglassful of water; mix the eggs, sugar and water well, then drown in the flour and mix together and work it lightly.

MARBLE CAKE.—Light part—Two cups of white sugar, one cup of butter, one-half cup of sweet milk, whites of four eggs, 2½ teaspoons of baking powder, two cups of flour. Dark part—One cup of brown sugar, one-half cup of molasses, one cup of butter, one-fourth cup sour milk half a teaspoon of soda, yolks of four eggs, flour to thicken, and flavor.

MUSHROOM CATSUP.—To 1 bushel of mushrooms, add 1 ounce of cinnamon, 1 ounce of cloves, 1½ ounces of black pepper; let them lie five or six days in a keg or barrel, take out the juice and squeeze the mushrooms, then boil down to one-half, and add vinegar (about 1½ pints) to suit taste. Bottle and use.—Mrs. F. W. in Martinez Item.

ROAST BEEF.—Remove the bone from the thin part of the roast, then fold it around against the thick part of the meat. Skewer it well. Lay some thin slices of bacon in a dripping-pan with the beef, and place in a hot oven; salt when half done and baste frequently. Minced onion and parsley can be added to the gravy. Allow 12 to 14 minutes to the pound in the roasting.

CORNMEAL MUFFINS.—One egg, one teaspoon of salt, one tablespoon of lard, three teaspoons of fresh buttermilk, two small teaspoons of soda, and enough cornmeal to make as thick as cake batter. Sift soda into meal and add salt last. Grease the muffin-pan well, and have hot enough to fry before putting in batter. Place in a hot oven and bake quickly.

ORANGE PUDDING.—Grate three sponge biscuits in enough milk to make a paste; beat three eggs and stir them in with the juice of a lemon and half the peel grated. Put a teaspoonful of orange juice and one of sugar with half a cup of melted butter in the mixture; stir it well, put in a dish with puff paste around it, and bake slow one hour.

SPONGE CAKE.—Two cups of sugar, 2½ cups of flour, one-half cup cold water, four eggs, two teaspoons of baking powder. Beat the yolks of eggs thoroughly with the sugar, add the water, then the flour with baking powder, and lastly the whites of the eggs well beaten.

MEAT SALAD.—Chop fine one or two pounds of corned beef, then take two-thirds of a cup of vinegar, one tablespoonful of sugar and one egg Beat all together, and pour into the frying-pan and let boil, then pour into a dish to mold. Serve in slices when cold.

EXCELLENT PIE CRUST.—One cup of lard, one cup of sweet milk, pinch soda, one tablespoonful of cornmeal, salt and flour enough to mix rather soft; do not knead it.

SAUCE FOR FISH.—The yolks of three eggs, one teaspoonful of vinegar, quarter of a pound of butter, a little salt. Stir over a slow fire.

The Week.

The most notable event of the week has been the strike on one of the leading Western railways, which at one time bid fair to seriously interfere with overland travel and freight movement. There was a tie-up of four days on the Santa Fe system, but it did not extend to other lines. Even this delay caused much hardship at some southern points, and orange picking was stopped for fear of a permanent stoppage. As it was, there were several trains of oranges side-tracked in Arizona and New Mexico, and doubtless shippers will suffer somewhat from the delay. We do not profess to understand the equities between the railway employees and managers, but it is plain that there should be some way to obviate the stoppage of trains and the incident public inconvenience and loss. We notice that Congress is calling the attention of the Interstate Commission to the problem. If it has any wisdom on the subject it should make it known.

California interests have progressed well since our last issue. The weather has been at its best. Growth of all kinds is progressing, and field-work has been pushed to the full measure of the lengthening days.

The Bag Business.

The usual talk, and probably the usual maneuvering, of grain-bags has already begun. Any year with a good outlook gives occasion for attempts at concentrating bag supplies with the idea of selling them high when the farmer needs them next June. There is not nearly the harm done nowadays that there was years ago, for our farmers have become more forehanded financially, and more independent, and have secured facilities for doing business which they did not have a decade or more ago. Still there usually is some concentration of bags, and some money is made by squeezing those who have not been far-seeing enough to lay in supplies when prices are low. It is reported that this movement has already gained momentum for this year's campaign, that the bags are cornered, the freights are cornered, etc. This view is held by the *Evening Bulletin*, and was set forth in its issue of March 17th as follows:

It is now well known on the "street" that the ring intends, by controlling the supply, to force the price of bags up to ten cents. This will be equivalent to levying tribute upon the farmers of the coast to the tune of \$1,200,000. In round figures 40,000,000 bags are required to cover the wheat crop of California, Oregon, and Washington Territory in ordinary seasons. At six cents, the ordinary price, \$2,500,000 would be required to purchase that number of bags. Last season the dealers carried over about 14,000,000, every one of which, it is understood, the syndicate either owns directly or controls under optional contracts. The ring now has 25,000,000 on the way by clipper from Calcutta, not one of which will be sold for less than nine or ten cents. As the ordinary price of a jute grain-bag is seven cents—that is to say, a fair profit goes to the manufacturer at that price—the bulling operations of the ring will net them \$1,200,000. This sum the farmers will have to pay.

Not only has the syndicate got control of this season's bags, but preparations have already been made to "corner" next year's supply. It is stated on good authority that they have purchased 14,000,000 for delivery in 1889, and made contracts with the Calcutta mills for an option on all bags manufactured in excess of the demand from India. Not only this, but it is affirmed that the ring has also "cornered" the means of transporting bags from the Orient, by contracting for all the steamer freight up to July or August, 1889. Therefore, if a man had a shipload of bags in Calcutta next year he would not be able to get them here until after the wheat crop is harvested.

Judging by the behavior of the bag-manipulators in previous years, the conduct described above is just about what we would expect. The *Chronicle* of Tuesday has an article denying the *Bulletin's* statements, denying that there is a corner, and naming the leading operators who are said to have bags for sale.

However the facts may really be, it is quite clear that the output of bags from the State Prison, where the factory is being pushed to its full capacity by working day and night shifts, will prove a most important factor in preventing the squeeze which greedy dealers usually plan for. It is not that the manufacture will reach such very high amounts, but by having this source of supply entirely out of dealers' control, a moral effect is produced, which cannot but be powerful. It is very hard to hold a "bag ring" together, even if it has its own way in all things, for those who have much money in such a venture are timid, and this feeling will be promoted by the operation of the San Quentin factory. We are glad that the management proposes to use the influence of the concern to its full weight in the interest of the grain-growers. The following is taken from a letter by Gen. John McComb, warden of the San Quentin prison, addressed to two dealers who wished to get control of a great part of the prison's output on the plea that he had orders for them from farmers:

SAN QUENTIN, March 15, 1888.

Gentlemen: Your inquiry about grain-bags, dated 7th instant, came duly to hand and received my careful attention. As you are aware, the Governor of this State some time ago made the announcement that bags manufactured at the prison would be sold to farmers only, or as far as practicable. This declaration has had a wide circulation, nearly all the newspapers in the State publishing it, and I am of necessity bound to carry it out in good faith as near as possible.

The immediate effect of this declaration was that the farmers all over the State began to send in inquiries, and enough quotations and terms have been given by me to make it a well-known fact throughout the farming community of the State that I shall endeavor to conform strictly to the Governor's wishes in this matter.

Orders for bags from direct customers have since been briskly received, and it has become a matter of calculation to determine how nearly the product of our mill can be disposed of in this way. The indications at the present time are that we shall not be

able to manufacture more than will be needed to meet the demand thus created, and therefore I must exercise the greatest caution in determining what course to pursue when inquiries are received from dealers, not direct consumers, for large quantities of bags such as you desire.

After mature reflection I have arrived at the conclusion that it would not be prudent for me to sell such large quantities to dealers, but submit the following proposition: I will sell you 200,000 22x36 grain-bags at 8 cents, net cash, delivered at Jackson-street wharf, San Francisco, on conditions as follows: Bags to be shipped direct from here to consumers in such lots as may be required, bills for same to be sent to and paid by you, on receiving notice of shipment; 100,000 bags to be delivered between now and April 1st, and 100,000 bags between April 1st and 15th. This is the best offer I can make, and in no event can I now accept your order for more than 200,000 bags.

Trusting the foregoing will serve to explain the delay in answering your inquiry, I am yours, very respectfully,

JOHN MCCOMB, Warden.

A similar letter was written to the other broker who desired to secure the \$400,000 lot. As the brokers did not purchase the bags it is but fair to presume that they did not have customers waiting for them as was stated in their applications, and that the bid they made was merely to obtain control of as many of the State bags as possible.

The Governor and the Prison Directors are working in accord to make the State bag-factory not only self-supporting but of great value to the farmers, and if they succeed in breaking up the bag conspiracies in this city they will deserve the thanks of the State.

Fertilizers for Fruit.

Indications are unmistakable that the use of fertilizers is spreading rapidly in this State. This we count as satisfactory not because it may be inferred from the fact that our soils are wearing out, but because it shows that the old notion that California soil is inexhaustible is giving way to truer ideas. There are, it is true, many places in which the soil, from its depth and richness, will not need enriching for years to come, but if a general appreciation can be had of the fact that fertility can be reduced here as elsewhere, the result will be better conservation and local use of fertilizing materials. Learning this lesson early enough will lead to the application of manure before the land has to cry for it, and thus, by wise action, exhaustion may never come.

The orange-growers of the South are moving early in this matter, and will be rewarded. At the last horticultural convention a paper was read by Commissioner A. S. Chapman of San Gabriel in which he strongly urged the use of fertilizers on oranges, lemons and walnuts. He notes that the effect of the fertilizers on the Australian Navel is very marked, for it generally happens that there are on this tree a great many oranges that do not develop the proper characteristic. Last year on manured trees the stamp of the fertilizer was plain. Walnuts and lemons left uncultivated for two years and manured by running the water with sheep manure in the irrigating ditches, etc., gave better crops than ever before. He especially mentions this case:

We have a particular plot in our orchard, about five acres, where we have not allowed a weed to grow, cultivating after each irrigation; but this orchard was fertilized with sheep manure at each irrigation, and limed last winter at the rate of 10 barrels to the acre. These trees will average 12 feet in diameter and 15 feet in height. They are literally covered with fruit, and will average about six boxes to the tree.

At Riverside, according to a recent issue of the *Press*, there is much attention being paid to fertilizing. Sheep manure has been used quite largely throughout the valley in strengthening the soil in the production of the orange; and highly beneficial results have been obtained from it. But sheep manure is getting so scarce and the price asked for it is so high that growers will have to resort to other fertilizers. Sheep manure now costs \$3.50 a ton.

H. B. Everest recently received a carload of superphosphate for his Riverside orange grove, buying it at \$31 per ton, or \$310 for the carload. This he thinks quite as profitable as sheep manure at present prices. He applies from four to six pounds per tree to six-year-old orchard. His method of applying it is to run a chisel-tooth cultivator ahead of the grain-seed drill and to distribute and drill in the fertilizer as deep as feasible to do without injuring the roots. By drilling it in it prevents it from being carried off by irrigating and makes it quickly available to the roots of the tree.

This experience is being reproduced here

and there in the most progressive neighborhoods at the South, and it is wise. The result is better growth of young trees, larger fruit and more of it.

In the upper part of the State also fertilization of orchard and vineyard is receiving more attention than formerly, and the indication is a promising one.

Board of Forestry.

A meeting of the State Board of Forestry having been called for last Tuesday afternoon, Chairman Kinney and Secretary Forman were at their posts, but a quorum of members was wanting. This, however, did not prevent the reception of some interesting reports.

Special Agent Collins stated that having received information last summer of illegal timber-cutting on school lands in Mariposa, he worked up the case and submitted it to the Attorney-General, expecting him to proceed against the guilty parties. That officer, however, on looking up the law, found he had no authority to bring a civil action under such circumstances, but only to prosecute criminals, so that it appears desirable to secure legislation giving the board additional powers.

Mr. Behen, special agent at Pasadena, reported that S. L. Leighton & Co., contractors in Los Angeles county, were cutting timber on a section of unsurveyed land recently forfeited by the railroad company to the Government. They claim to have bought the timber from the railroad company prior to the forfeiture of the grant. J. Marion Brooks, U. S. District Attorney for Southern California, was notified of the facts, but said that he did not want to have anything to do with such lands.

In regard to the distribution of seeds, Mr. Behen stated that some of the persons to whom they were sent did not call for them, and consequently the larger portion have been planted in the Park nursery. Of the seeds so far planted, Mr. Clark, manager of the nursery, reports that those of the sugar gum proved to be the best. The loto and wattle seeds sent to Pasadena have just been planted.

Mr. Kinney announced that Hon. Wm. A. Holman, Chairman of the House Committee on Lands, has introduced a bill into Congress as a substitute for those submitted by the State Board of Forestry and B. E. Fernow, the National Forestry Officer. Mr. Holman's bill provides for placing the protection of all forest land reserves in the hands of the army, instead of under the control of the Forest officers. All forests consisting of commercial timber are reserved as to the sale of land, and as a substitute for the present system a sale of timber is provided for under control of the Secretary of the Interior. The President is further empowered to withdraw from sale or entry any forest lands that he may think necessary for the preservation of the climate, streams and general welfare of the people. This bill is very much opposed by the foresters in the East, as not sufficient to produce the results desired; but Mr. Kinney deems "half a loaf better than no bread," and regards the proposed enactment as at least a step in the right direction.

A series of large photographs, illustrative of lumbering operations in California, has been donated to the board by Chas. G. Yale, and will soon adorn the rooms.

Prof. and Mrs. J. G. Lemmon having been appointed botanist and artist to the board, the Professor is to be supplied with a fine photographic outfit, and will soon start to investigate the habits and growth of the forest trees of California. He will also gather data of the flora, while Mrs. Lemmon will make drawings and sketches. The information thus obtained will be incorporated in the board's annual report.

PERSONAL.—We had a pleasant call the other day from Mr. C. L. Travis of Minneapolis, a well-known inventor of improvements on the twine-binding mower, and a member of the Minneapolis Twine Binder Company. Mr. Travis comes to California merely for recreation, and is getting that in acceptable form. He will not admit, however, that all the good things in the world are in California, but still clings to the scenes and interests of the great Northwest. His stay in California this time will be brief.

THE Stanford University has three large buildings completed.

Olive Culture.

[Written for the RURAL PRESS by F. B. LOGAN.]

The history of the olive dates far back into the misty past. It has been the theme of many legends of poetry and of song. In scriptural times the olive branch was regarded as the appropriate emblem of peace and plenty, and is still held in like veneration. In view of this fact, and the further consideration that it is evidently destined to become one of the prominent industries of California, I venture to give a few observations on olive culture—the result of some investigation of the subject and of interviews with experienced olive culturists. Prominent among those to whom I am indebted for valuable information on the subject in question, I make grateful acknowledgment to E. E. Goodrich, Esq., of Santa Clara. This gentleman is the proprietor of a fine olive orchard of 76 acres, known as the Quito Farm, Santa Clara valley. He has spent several years in Italy and other portions of Europe for the express purpose of acquainting himself with the details of the most approved methods of olive culture and oil manufacture. In addition to such advantages, he has always had on his plantation a most competent and reliable foreman, who, in practical knowledge of the subject, has few equals in this country. Mr. Goodrich is therefore quite capable of imparting much reliable intelligence on the question. From this source and others above referred to, I am led to the conclusion that, while the olive will grow (where the climate is suitable) on almost any kind of soil not too wet, the best results are attainable only on moderately fertile lands, dry, stony, hill and mountain soils being decidedly preferable to moist valley lands.

Reproduction.

There are numerous methods of propagation, as by seed; by simple cutting; by the ramified cutting; by suckers that shoot from the trunk; by the layering system.

Practically the best and most hardy trees are propagated from seed, followed by grafting, but it is estimated that at least 10 or 12 years must elapse before a tree from the seed will bring any return, whereas from cuttings a light crop may be expected the fourth year with fair attention.

As to whether large or small cuttings are preferable, opinions differ. Mr. Goodrich's experience favors large cuttings and short rather than long ones. His method is to plant them absolutely upright, the top several inches beneath the surface of the ground. By this process his percentage of loss is very small.

It is a common error prevalent in California to plant the trees too near each other. Many of the trees of Mr. Goodrich's orchard were already planted when he came into possession of it. The distance, 20 feet apart, he now finds altogether too close, and is obliged to remove the alternate rows each way, leaving the trees 40 feet apart. This is the distance he recommends, for the reason that the health of the tree demands abundant light and air, and furthermore, the enormous size which it attains in the usually long years of its existence requires at least that space.

Early Profits.

Doubtless many are deterred from engaging in olive culture by reason of the impression which generally obtains that so many years must elapse before any profitable returns can be realized from the outlay incurred in starting a plantation. Mr. Goodrich seems to have devised a method of obviating this difficulty by planting grapevines between, and thus, while he is waiting for the young olive trees to come into bearing, after two or three years he is getting fair pay from the vines. His opinion is that between the olive trees a row of peach, or some other early-bearing fruit trees, might be planted at 20 feet, and then at 10 feet a row of grapevines. After the lapse of a certain number of years, or whenever the olives begin to bear, and there is interference with them by the other trees and vines, simply dig them up. At this time, say from 8 to 10 years, the income from the olives, it is estimated, will amount to more than double that of the same number of acres of vines; and the rate of profit on the olive product would still continue to increase beyond that of the former for years to come. This conclusion is by no means theoretical. From the vines, mostly young, growing between the olive trees on the Quito farm, was manufactured near-

ly 9000 gallons of wine last year; and the olive crop, to all appearances, is equally as large as, in all probability, it would otherwise have been.

Where the plan of Mr. Goodrich is adopted, that of planting vines among the trees, an oil manufactory and winery may be combined—a matter of much economy, since the manufacture of oil and wine respectively engage separate and distinct seasons of the year.

The vines on the Quito farm are, of course, considered as an additional, but subordinate crop, and it was not the original intention of the proprietor to build a winery. The threatened low price of grapes in 1887 made it seem desirable. The dimensions of the building, 50x30 feet, were calculated for the estimated crop of the Quito at its highest production (not more than 150 to 200 tons), but, by the use of large fermenting tanks, somewhat crowded, and three fermentations and the immediate transfer of the wine to the cellar, or by providing cooerage in pieces of from 2000 to 5000 gallons, it would be

the view of ancient authority handed down through the ages, it would appear that after planting the olive may be left to take care of itself. Modern experience teaches that the olive tree, though by no means exacting, needs a certain amount of care, especially as regards pruning. In support of the contrary opinion, however, the fact may be cited that in certain olive regions of Europe, Africa and Asia, there are still many olive trees that receive no care whatever, and are never pruned. For practical information on this point the reader is referred to Mr. Ellwood Cooper's treatise on the olive, and other writers who have made this branch of husbandry their study.

Mr. Goodrich favors constant cultivation, which, however, should be shallow on account of the roots which grow near the surface of the ground.

The subject is too vast to attempt in this article anything more than a few general observations on its several divisions. There is,

in lubricating, and for numerous medicinal purposes.

Adulterations.

It is a well-known fact that it is difficult to get a pure article of oil in the American market. In fact, it is doubted that any of the oil imported from Europe and placed on our markets contains but a fractional part of the pure oil of the olive. What is not mixed with hog's lard and cottonseed oil before it is shipped to our shores is well attended to by our own enterprising wholesale merchants before reaching the consumer. As an evidence of the extent to which the fraud is perpetrated upon the public, I might state that when Mr. Goodrich, a few months ago, tried to obtain some pure olive oil in the city of Florence, he was gravely informed by a prominent exporter to whom he applied, that the genuine article could not, in his opinion, be had in retail quantities in that city. Thus it is, what we buy is a miserable adulteration with the exception of the comparatively small quantity supplied by those engaged here in this infant California industry.

California's Adaptability.

The profitable cultivation of the olive is beyond question, as attested by all who have made the subject a practical study. In fact it may be doubted that any section of Europe backed by the centuries of olive-production fame, has a percentage over some localities in this State. The greater evenness of climate here over that of most portions of Europe is of incalculable advantage to the California olive culturist. The disastrous winters which visit the former on the average of every nine or ten years, has kept the production so far below the demand that the high ruling prices have held out the temptation, above alluded to, of expanding the article by adulteration.

"This serious check to its development in Europe," says Adolphe Flamant of Napa, Cal., in his "Practical Treatise on Olive Culture," "is the very reason why its culture should be adopted fearlessly and extensively under the temperate climate of California, for which Providence has been so lavish in its beneficent gifts."

SAVING POSTAGE.—We lately referred to the fact that under the new postal convention Canadians can mail seeds, plants and cions to any point in the United States at the rate of four cents per pound, where persons in the United States must pay 16 cents. It is said that one seedsman, doing a large business at Rochester, N. Y., now ships his seed by the carload to the Canadian postoffice at the other end of the suspension bridge, where Canadian stamps are affixed to the packages and they are mailed direct to the U. S. buyers. The Canadian Government is satisfied that American seedsmen shall pay all their postage in the Dominion. Another seed firm is now sending out 500,000 catalogues. It is found cheaper under this new convention to send the catalogues in bulk to Canada and then to mail them under Canadian stamps to the United States. To offset this practice Postmaster-General Dickinson has issued a circular instructing postmasters to rate up postage on packages mailed in Canada for delivery in this country which bear indications upon their covers that they were sent by dealers in the United States. A change in our domestic postal rates is certainly called for.

CORN AND WHEAT.—The statistical returns at the Agricultural Department for March show the corn crop to be the smallest since 1884, estimated at 508,000,000 bushels, a decrease of about 100,000,000 from last year. The indicated stock of wheat in the hands of farmers is 132,000,000 bushels, as against 122,000,000 bushels at the same time one year ago; used in seeding, 34,000,000 bushels; home consumption, 187,000,000 bushels; exported, 61,000,000 bushels; visible supply, 38,000,000 bushels.

BUFFALO FARMING.—It is suggested in the *Globe-Democrat* that if some of the great cattle kings of the West would give up raising cattle and go into buffalo farming they would find it an immensely profitable business. Not only would every hide obtainable find ready sale, but the meat would find a market in the cities, and the refuse of the carcass could be made into the dozen articles of profitable commerce that the steer now affords.

SCENE ON THE QUITO OLIVE FARM, SANTA CLARA VALLEY.

possible to handle and store nearly 100,000 gallons.

Manufacture of Oil.

In considering a comparatively new and undeveloped fruit culture, it is well to look at its development in the future as regards machinery and methods. It will not be necessary for the farmer in every instance to provide himself with oil-crusher and press, or to know the processes of oil manufacture and take the risks of them, or set up the elaborate and expensive tanks for storing, and undertake the delicate and expensive processes of bottling and casing. As the grape farmer sells his grapes to a winery, the prune, peach and apricot raiser to a cannery or a drying manufactory, so the olive farmer of the future will perhaps sell his green olives for pickles and his ripe olives for oil at some mill, such as that of the Quito, as is done in Italy universally to-day. By this system the knowledge and experience which are necessary will be at the command of a large district.

General Care.

It is admitted by all experienced writers that the olive will survive greater neglect than almost any other fruit tree on the earth. Taking

however, such a lack of definite knowledge here on the question which must soon become one of broad and deep interest, that I will mention a few of

The Uses of Olive Oil.

The Bible teaches how the oil was regarded as a symbol of divine grace. Anointing was a common religious observance, a sacred rite of the Hebrews.

In a hygienic sense it was used for bathing. Athletes applied the oil with rubbing before appearing in the arena, as giving more suppleness and vigor to their bodies. It has never been disputed that the effect of olive oil over the human system is quite salutary. While some claim that all animal fat tends to injure the stomach and thins the blood, the oil of the olive aids digestion and the brain to attain the highest power of intellect. Its culinary uses are quite numerous—a fact sufficiently demonstrated by the amount—92,000,000 gallons—which Italy alone supplies for table uses.

The oil always has been the basis of very many perfumed preparations for the markets of the world. It is used in the manufacture of soap, of broadcloth, in dyeing, in lighting and

ENTOMOLOGICAL.

Further Notes on *Icerya*.

[EDITORS PRESS:—The following communication from Prof. Riley will doubtless be of interest to your readers. The *Icerya sacchari* referred to is the only other species belonging to the same genus as our *Icerya purchasi*, and infests sugar-cane in the island of Mauritius. The Dr. Icery referred to is the person after whom Signoret named the genus *Icerya*.—D. W. COQUILLETT, Los Angeles.]

My Dear Mr. Coquillett: I have just read your remarks in the *Pacific Fruit Grower* for February, and take occasion to send you a few other statements which you may deem of sufficient interest to publish.

On the general subject of the formation of technical terms it is hardly worth while to enter into discussion. As you know, I am by no means a purist in such matters, and where we have such authorities as Dr. Sharp in Coleoptera for terms like *Darwinhydrus* and *Huxleyhydrus* there is perhaps no limit to individual idiosyncrasies in this regard. The fact that authors have coined badly constructed words is scarcely justification for continuing the practice, and I would rather have a pure concoction invented without derivation than a derived one constructed in opposition to the ordinary rules of nomenclature. Signoret has been guilty of a great deal of poor work in this direction, but would hardly have been able to evolve *Icerya* out of *Isocera*.

However, I said I would give you some statements. As I wrote you before, I thoroughly studied Signoret's types while in Paris and satisfied myself that *sacchari* is distinct from *purchasi*. The settlement of this fact leaves the question of the original home of *purchasi* still open; for, though this species may be found to be indigenous to the islands of Bourbon and Mauritius, together with *sacchari*, i. e., both species may occur in those islands, yet there are stronger probabilities than ever now that the more prevalent belief that *purchasi* comes from Australia is the correct one. I have had considerable interesting correspondence lately which reads almost like a romance. Dr. E. Icery of Mauritius (as I learn from Col. Nicholas Pike, now of Brooklyn, N. Y., but formerly of Mauritius) was a well known planter in the District of Flacq. He wrote a great deal on the cultivation and manufacture of sugar, and was a ripe scholar and gentleman. Col. Pike brought home with him to this country specimens of the "Pou blanc" and gave them to the late Louis Agassiz. This "Pou blanc" had been described by Westwood in the *Gardeners' Chronicle* for Dec. 22, 1885, as *Dorthesia seychellarum*. In hunting up Westwood's figures and descriptions, I felt convinced that they belonged to *sacchari*, and, sure enough, my examination of the specimens confirms the belief. I will say nothing further now, however, as I hope soon to put together a supplementary article on *Icerya* with a statement of the parasites so far found in this country. C. V. RILEY.

Washington, D. C.

Suggestions From a Visitor.

EDITORS PRESS:—I feel it my duty to write a few lines to your estimable paper, thanking you and many of California citizens that treated us with so much courtesy as guests of the American Horticultural Society, from San Diego to Redding. Every place we made a halt or visit the people made us happy, because they were happy themselves—and no wonder, with such a climate, soil, and appurtenances to enjoy life, and to make a living by either farming or gardening, and fruit-growing in particular. We were astonished to see so much progress made in the several branches, especially in dried fruits, raisins, prunes, figs, and apricots, the last having no competition anywhere on the globe. The Japan persimmons, olives, nuts, almonds, English walnuts, pecans, chestnuts, all interested us; also some filberts—this last named but a few are yet grown, but seem to be a sure-paying crop, and then last, but not least, nearly all the citrus fruits, where the mountains can shelter the orchards from the northern winds and heavy frosts.

We don't regard the semi-tropical fruits as being as profitable as our northern varieties, because there are more ways of preserving the latter, and a wider range to send to market. The waste on citrus fruit is quite large, and the time for marketing quite limited, and excess of over-production very likely to occur, while the other fruits, either fresh, dried, or canned, have all the year and the whole world for a market. California is destined to furnish all the staple fruits, nuts, and wines for all America in a very few years, and for that matter Europe, too, in time, if the future planting and raising of trees continues to increase in proportion as it has done within the last five or six years.

But I fear there will be some drawbacks on account of the insect depredations, unless strict watch is kept and they destroyed as fast as they appear, because such a favorable climate will allow their increase 12 months in the year, while in our Northern States only the summer season favors them. I have reference to the scale insects in particular. I noticed them in some of the older orchards, in the southern counties, on almost every bush or tree except the pepper and pine trees. In mentioning the matter to some fruit-growers they referred me

to Professors Klee, Coquillett and Hilgard, as they are experimenting and have found cheap remedies for their destruction; but it takes a good deal of time and considerable expense to get a right to spray whole orchards, shade trees and bushes in dooryards, streets and fields, and unless all are gone over and insects killed in one season they will soon get the start again. The same varieties are more or less in the Northern States, but are not as tenacious because they have a shorter season to grow.

Washes Which Will Hold Fast.

These insects protect themselves as soon as they are set free from the mother scale, and finding a good lodgment, they build a scale over themselves and soon enlarge and do so as long as they live in your climate. With us, they

insects. All these substances can be diluted with water, but they want to be strong enough to form a coating over the insect and to last for at least a month or two. By that time it will crack by drying and then will scale off insects and all, and the bark will be clean and the wash will not do any injury to the fruit and foliage. It has worked well with us and we have no doubt will do so with you in your State. I hope some of your orchardists will try it with same results. GEO. P. PEPPER.

Pewaukee, Wis.

Wainwright's Spraying Appliances.

We are glad to see new inventions for insect destruction and to notice the growth of the

ORCHARD SPRAYING WITH EUREKA PUMP AND SPRAY NOZZLES.

only grow and increase when not frozen up, and therefore any substance that will encase them so that they cannot move and enlarge will destroy them, because they must have space and air. Any substance that will not injure the foliage and fruit, and at the same time is obnoxious to the insect,

business of those who manufacture and deal in spraying appliances, for it is an indication that the anti insect warfare is in earnest and that our profitable and promising fruit interests are to be preserved.

William Wainwright, whose establishment is

WAINWRIGHT'S EUREKA AND TELEGRAPH NOZZLES.

will destroy them. We have used glue diluted with water and added Scotch snuff; also tea from tobacco stems and glue, and if no cheap glue could be had, have used blood. We have also used resin soap, water and Indian turnip juice. All worked well when every limb was well painted over or sprayed. In your State the blood will answer best with either tobacco juice or pepper tea. I should try pepper tea made from your pepper tree leaves or seeds, with diluted blood just thick enough so it could be sprayed on with a force-pump or painted on with a brush, on or before the buds break or trees leaf out. Blood can be had at any of the slaughter-houses for only the labor of saving it. If tea from tobacco stems is used they can be had very cheap from any tobacco factory, especially after they had been condemned by the Custom House Inspector, and been sprinkled with gas, tar water or petroleum. We have seen the stems advertised for four dollars per hoghead of 500 pounds at Chicago and Philadelphia. If so treated they can be had very cheap and are worth more for the purpose mentioned as a wash for destroying

at 105 Beale St., upstairs, is bringing out many interesting devices in pumps, tanks, hose adjustments and nozzles, and has recently issued a large illustrated circular describing his appliances, which should be read by those who are examining this class of goods. We give on this page a general view of orchard spraying, which introduces some of the inventions to which we allude. On the wagon is the large Eureka pump and tank. The special claims of the Eureka pump are thus described:

The improvement consists of the employment of an extra inlet for the admission of air into the body of the pump and from there into the air-chamber or discharge pipe. These pumps are operated like other pumps, but the inlets are governed by stop cocks and check-valves. These air inlets can be placed on any style of pump, either in the plunger-rod or in an extra pipe with check-valve placed so as to allow air to enter the pump near the bottom or below it. The amount of air or liquid can be

controlled by the stop-cocks governing the air or liquid inlets. If it is desired to pump air alone, shut liquid inlet; if liquid is required, shut air inlet. If both air and liquid are required, open both stop-cocks slightly. The advantage these pumps have over others is, as both air and liquid can be pumped by the same pump at the same time, it enables the operator to force the liquid against any amount of elastic pressure in the air chamber (up to 100 pounds to the square inch if desired). As the air and liquid are somewhat mingled in their passage to the air chamber, it insures a continuous fine, misty spray, at a small cost of materials. Another advantage this pump has is, as the air chambers are extra large, by putting on the air pressure a continuous spray may be kept up for five minutes to two hours, according to the size of the air chamber employed, without using the pump, thus enabling one man to charge and use alone.

The way this principle is employed is seen on the left hand of the engraving, where the operator has charged the air chamber and slung the apparatus on his back and gone to spraying. The engraving also shows the arrangement for single and double spray tips, also the arrangements for bringing the spray to bear upon the different parts of the tree.

We also give views of the Eureka double nozzle and the Telegraph spray nozzle, the latter having been used with satisfaction in spreading whitewash on large barns and other outbuildings, the operation being much easier and cheaper than brush application. The Eureka and Telegraph nozzles are both easily adjustable, and all degrees from a solid stream to a misty spray can be secured with them.

The Funereal Month of March.

An observant metropolitan barber says that he can tell one's physical condition by the state of the hair!

The Bible tells us that with his hair gone Samson lost his strength. The Romans considered baldness a serious affliction, and Julius Caesar was never quite satisfied with himself because his poll was bare.

The face, however, is the open book and one can readily trace in its various expressions, lines, changes and complexion the state of the system.

The eye that is unusually bright and yet has a pallid brightness, the face upon whose cheeks nature paints a rose of singular beauty and flush, more marked in contrast with the alabaster appearance of the forehead and nose and lower part of the face, is one of those whom the skilled physician will tell you will some day dread the funereal month of March, because it is then that consumption reaps its richest harvest. Consumption, they tell us, is caused by this, that and the other thing, by microbes in the air, by micro-organisms in the blood, by deficient nutrition, by a thousand and one things, but whatever the cause, decay begins with a cough and the remedy that will effectually stop the cause of that cough cures the disease of the lungs.

That is all there is of it. The cough is an evidence of a wasting. To stop it effectually, a remedy must be used that will search out the cause, remove that and then heal the lung and do away with the cough. This is the power, special to itself, possessed alone by Warner's Log Cabin Cough and Consumption remedy. This is no new-fangled notion of narcotics and poisons, but an old-fashioned preparation of balsams, roots and herbs, such as was used by our ancestors many years ago, the formula of which has been secured exclusively by the present manufacturers at great trouble and expense. It is not a mere cold-dryer. It is a system-searcher and upbuilder and a consumption expellant. Where others fail, it wins, because it gets at the constitutional cause and removes it from the system.

J. W. Hensaw of Greensboro, Pa., on Jan. 15, 1888, reported that "he had derived more real benefit, for the length of time, from Warner's Log Cabin Cough and Consumption remedy than he had for years from the best state physicians."

If you have a cough, night sweats, "positive assurance in your own mind that you, oh—you, have no consumption," and yet lose flesh, appetite, courage, as your lungs waste away, you may know that soon the funereal month of March will claim you, unless promptly and faithfully you use the article named. If other remedies have failed, try this one thoroughly. If others are offered, insist the more on trying this unequalled preparation.

Some persons are prone to consumption, and they should never allow the disease to become seated.

An Open Letter.

FELTON, SANTA CRUZ CO., CAL., }
March 3, 1888. }

To the Bull & Grant Farm Implement Co., 14 and 16 Main St., San Francisco, Cal.

DEAR SIR:—Will you please send us a catalogue and price list of your Rushford Tubular Steel Axle Wagons? The Rushford Wagon I bought for our own use two years ago has proved itself to be A No. 1 in every respect. It has carried from two to three thousand pounds more than the guaranteed capacity, and is as sound at present date as when purchased. It is the best ironed wagon of any Eastern wagon we have ever handled. The wheels of this wagon are solid, and the tires heavy and well braced with good heavy iron. Please quote me prices for this season and oblige,

Yours respectfully,

W. H. TALBOT & CO.

\$500,000

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., Room 3.

THE LOUISIANA TRACT!

SITUATE ONE MILE FROM THE FLOURISHING

City of Sacramento,

With a Population of 30,000, and

$\frac{1}{4}$ MILE from Terminus of an ELECTRIC RAILWAY, now in course of construction.

SUBDIVIDED INTO 5-ACRE LOTS.

Soil is Deep and First-Class Fruit Land.

CITRUS AND ALL DECIDUOUS FRUITS, and the choicest of Plants reach the highest state of perfection upon this soil.

30 ACRES OF TRACT IS GOOD ALFALFA LAND, from which three crops a year can be cut. 5 ACRES IN FRUIT, well attended to, will make a handsome income. One Acre in Strawberries will net \$400 a year.

WATER IN ABUNDANCE at a depth of 30 feet. One Windmill, costing \$80, will irrigate five acres.

PRICE FROM \$175 TO \$250 PER ACRE.

TERMS.—One-fourth cash. Deferred payments in five annual installments; interest at 7 per cent, free from taxes. Title perfect.

Healthiest Location and Best Market in the State.

—APPLY TO—

HOMES and RANCHES!

E. TUCKER,

Real Estate Agent,

MYERS ST., OROVILLE, BUTTE CO., CAL.

Improved and unimproved lands to any extent from 5 to 5000 acres with good, comfortable homes and all necessary conveniences, for sale on desirable terms. These lands require no irrigation, Railways convenient, ample supply of water, and the climate cannot be surpassed. Apply as above.

PALERMO LAND & WATER CO.

DIRECTORS.

GEORGE C. PERKINS. HENRY WISE. D. K. PERKINS
C. W. McAFEE. A. S. BALDWIN.

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES

At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot.

Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. One hundred and seventy-five acres at Palermo are now being set out in the choicest varieties of Florida Orange Trees. Maps and further particulars of

SANTA YNEZ,

Santa Barbara County, California.

THE SANTA YNEZ LAND AND IMPROVEMENT COMPANY

Is now offering for sale at low prices and upon very moderate terms the choicest of

Agricultural and Horticultural Lands

Of the famous College Grant, in the aforementioned beautiful valley. The CLIMATE is perfect, SOIL rich and diversified, TOPOGRAPHY unusually varied and beautiful, a park-like growth of Oaks covering the entire valley. WATER SUPPLY more than sufficient for irrigation of all irrigable lands, and no alkali either in water or soil.

TRANSPORTATION FACILITIES superior now, and two trunk lines certain to pass through the valley within a year.

43,000 ACRES OF THESE CHOICE LANDS

Are for sale at from \$25 to \$150 per acre; terms of payment being one-third cash, one-third in two, balance in three years; six per cent interest on deferred payments.

To reach the Santa Ynez valley take any transportation line to San Luis Obispo, thence by Pacific Coast Railway to Santa Ynez or to Santa Barbara, thence by stage to Santa Ynez. Persons seeking lovely homes or lands for homes or quickly paying investments, cannot do better than purchase here. For further information refer to

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

FINE CLEVELAND BAY.—Haywards Journal: H. W. Meek has purchased one of the finest imported Cleveland Bays that he could find—"Napoleon." He is a rich bay, with black legs, good mane and tail, and superior action; is very deep in the girth and has wonderful style. He took the \$75 premium in London, besides the silver medal where he was shown against horses of all ages and open to all England. He also took first premium at Middleton, in Tusdale, and second premium at Bowes, in 1885. Since he was imported in August last, he took the first premium at the Illinois State Fair, at Olney, and first at the Fat-Stock Show at Chicago. Napoleon is half-brother to Baron Hilton, of the well-known Cook Breeding Farm, Contra Costa county, who has quite a reputation as a prize-winner on this coast. This horse was brought to this coast by Mr. Seth Cook, and Mr. Meek is to be congratulated on his good fortune in securing such a valuable animal.

Butte.

IRRIGATING BY PUMPS.—Oroville Register: A number of parties in this county have made practical tests of the pump. Among them are E. Fagin, V. P. Richards and Wm. Mould of Gridley. They are using the well-known Thomson & Evans patent crank and fly-wheel pump. Mr. Fagin tells us that his pump throws 5000 gallons an hour, is easily managed, and is rarely out of order. The Thomson & Evans pumps have taken premiums at many of the county and district fairs, as at the State Fair. For less than \$500 a man can fit up a pump that will irrigate his whole ranch, if he desires it, while a cheaper pump will answer all purposes for his orchard and garden.

A TOUGH HEN STORY.—Gridley Herald, March 15: Fred Haack is the owner of a hen that is hard to equal as a natural curiosity. The fowl has one head and neck, but two well-developed bodies and four legs, and it uses all the latter when walking. The greatest curiosity about biddy is that she lays two eggs at the same time, and has averaged 58 eggs a month for the last four months. Her last brood numbered 27, and she raised every one of them. She is of the Plymouth Rock variety.

Fresno.

GREAT SLAUGHTER OF JACK-RABBITS.—Selma Cor. Chronicle: The first rabbit-drive in Fresno county occurred March 9th, to-day, at Wildflower, twenty miles southeast of Fresno and eight miles from Kingsburg, Selma and Fowler, a line of men two miles long starting three miles east of the corral and going west to it. There were 300 men on foot, armed with sticks, at the start, which number had increased to 500 at the end. They were two hours in making the drive. Two wings had been built, half a mile long, each leading to the corral. There was a gate four feet wide and a chute 30 feet long leading into the corral, which was 60 feet in diameter and surrounded by a fence seven feet high, made of wire screen. The scene as the rabbits went in was most exciting, men, women and children hallooing at the top of their voices. Many rabbits turned and escaped before entering the wings. When the gate was closed the men entered and the slaughter continued for half an hour. Hundreds of rabbits had been killed in the morning against the fences and 4005 were killed in the corral. Though there were 500 men on the drive, the line was not compact enough, probably 1000 rabbits escaping through the line, though many were killed in the attempt. Most of those in the drive were inexperienced, but they worked well. The drive was on foot, on account of the country being generally fenced. R. B. Butler, a leading Fresno man, was marshal, with an able corps of assistants on horseback. At the end of the killing the chute was three feet deep with dead rabbits, and the air was filled with fur like a snowstorm. All parts of Fresno county were represented, and there were many people from Kern and Tulare. Some of the dead rabbits were hauled away for hog and chicken feed, but most of them were left on the ground. There will be another drive near Wildflower on Thursday, March 22, when the wings of the corral will be changed to the west side of the inclosure to accommodate the people on that side. The expenses of the drive were \$600, which was contributed by the citizens of Wildflower.

Humboldt.

SHEEP LOST.—Blocksburg Cor. Standard, March 19: The sheepmen of the eastern portion of Humboldt and Southwestern Trinity have suffered great loss of sheep this winter, owing partly to the cold, wet weather, and partly to the long continued dry spell in the fall. The rains held off so late that the cold weather came on before the grass could start, and consequently the sheep were very poor and weak and commenced dying early in the season. Then again the coyotes and other wild animals so destructive to the flocks are becoming very numerous throughout this section of the county. Unless they are checked soon the sheepmen will not be bothered about paying the five cents extra license which the supervisors of Trinity county have levied upon them. I made a flying visit among the sheepmen a short time ago, and learned from them that their losses were much larger than ever known before, being nearly one-half their entire bands, and they

were still dying. I noticed along the many trails which I was obliged to follow that the ranges were spotted with dead sheep. Cattle and horses have wintered very well considering the long cold season, the losses being very small compared to that of sheep.

Los Angeles.

MORE FLOWING WELLS.—Ontario Record, March 14: Splendid progress is being made in the development of artesian water north of Pomona for use on the northern portion of the (Chino) ranch. Five fully equipped steam well-boring machines are in active operation, and four flowing wells have been already secured. Cement pipe is being manufactured on the ground for conducting the water, two gangs of men, using 100 barrels of cement per week, being constantly employed. This enterprise will involve an expenditure of not less than \$200,000.

SPRING NOTES FROM ORANGE.—Cor. Times, March 15: The mocking-birds are making delightful music. The hills are green and beautiful. The early grain is in fine condition. Ranchers are busy in all directions, turning under the luxuriant growth of weeds. Now is the time to trim hedges, and many men are busy putting them in proper shape. The ladies are improving these fine days by setting out plants, shrubbery and flowers in their ornamental gardens.

ALHAMBRA is to have an Industrial and Citrus Fair. It will open March 29th and close Saturday, 31st. Excursion trains will bring the people from different points, and a very entertaining exhibition is looked for.

AZUSA PRODUCTS.—News: Mrs. Anna E. Logan, residing near Azusa, from three pounds of potatoes, received by mail from friends in the East, planted in April, 1887, and dug in July, obtained 200 pounds, 180 of which were immediately replanted, and in December were dug and yielded 2500 pounds, were sold, and brought four cents per pound. The beauty of these potatoes was in their uniform size and quality. . . . H. D. Briggs, one of the progressive farmers in the Azusa valley, on five acres of land this season raised as follows: On one acre of four-year-old trees, 115 boxes of oranges, which sold at \$3 a box; on 1 1/2 acres of apricots, three-year-old trees, five tons, which sold at \$30 per ton; on one acre of peaches, three-year-old trees, two tons, which sold at \$30 per ton; on 1 1/2 acres of alfalfa, which was cut seven times, 14 tons of hay, worth \$10 per ton, and on the same ground four tons of barley hay and two tons of corn.

Merced.

ANOTHER HUGE RESERVOIR.—Merced Cor. Chronicle, March 19: Merced is to have another mammoth reservoir. The location is a narrow defile, where Miles creek emerges from the foothills, about 14 miles east of town. This reservoir will be 60 feet deep, and cover about a quarter-section of land. It is intended to store water for irrigating the Ostrander colony, comprising about six sections of very fine land, lying midway between Merced and the foothills, and its estimated capacity is sufficient for the successful irrigation of 10 or 12 sections. The dam will be about 800 feet long and 60 feet high at the creek. A force of men and teams is already on the ground, and the work is being done in a thorough manner, under the supervision of competent engineers. The plans and specifications for the work were prepared by C. D. Martin, the engineer who completed the great Huffman-Crocker canal and reservoir, and who says it can be completed before the rains set in next fall.

Nevada.

CLOVER AT ROUGH AND READY.—Tidings, March 15: James Huitt has now cleared off and ready for clover about six acres of new ground. Clover does well in this part of the foothills. Mr. Balch last year put new ground in clover, cut two heavy crops during the season and had left splendid fall pasturage. The first crop was the heavier, and this he housed for his own use; the second crop was baled and sold, and this second crop when baled gave three tons and twenty pounds to the acre.

MAPLE SUGAR.—On the Brier farm, southeast of Grass Valley, are a number of sugar-maple trees. They are indigenous and there is a large grove of them. This spring Gardner Moulton, who owns the place, made a lot of sugar from the sap of these native trees. He was not well prepared for the business, and wasted a good deal of sap, because the vessels he used to catch it were too small and ran over when not closely watched. He made about 50 pounds of sugar from 15 trees, and besides the sugar has a nice lot of syrup. We believe this is the first time that sugar has been made from a native tree in California.

Placer.

FINE FIGS.—Newcastle News: H. E. Parker of Penryn showed us some fine specimens of his Smyrna figs the other day, and they are beauties. They are thin skinned, and as transparent and rich in sugar as any figs we have ever seen. The specimens shown us had undergone no manipulation in curing. They were simply placed in the sun and left there for a period of eight days—were neither rubbed, dipped, nor sulphurized. Mr. Parker has had many applications for cuttings from his trees, but has resisted all temptations of fancy prices, and is determined to keep them intact.

Sacramento.

DURHAM IMMIGRATION.—Record Union, March 17: Col. Jos. Combs of Linneus, Mo., arrived in this city yesterday, having left

Kansas City on Monday last. He has on the road 50 head of thoroughbred Shorthorns, comprising Marys, Josephines, Belinas and Venuses, which are to be sold here, though the day of the sale has not yet been decided upon. The pedigree of each one is said to be certified to by the American Shorthorn Association.

San Benito.

HORSE MARKET.—Free Lance: Saturday, March 3d, the date for the second monthly Horse Market, opened with the clouds thick overhead and the rain pouring down in torrents. In spite of this a large percentage of the 35 horses that had been registered were at Kent's stable before 9 o'clock, and the large building was tasked to its utmost limit to contain not only Mr. Kent's individual stock, but the horses brought for sale. Five buyers had come in on Friday evening's train, and Saturday noon's brought three more, making eight in all. On Saturday ten horses were sold, mostly intended for use in San Francisco, and on Sunday four more were sold, making 14 in all. Had it not rained so hard during this time, undoubtedly more horses would have been sold. With two exceptions the horses sold were of draft stock and purchased for teaming purposes in San Francisco. By next month the season for buying horses will have opened very briskly. Stock will then be in good condition and will command good prices.

San Bernardino.

ORANGE SHIPMENTS.—Press & Hort., March 17: Following is a review of the orange shipments from Riverside for the current season:

	Cars.	Boxes.
December shipments	18	5,271
January	54	15,650
February	143	40,969
March	78	12,148
Total to date	293	83,927

MOUNTED POLICE OR SHOTGUNS?—In a recent issue of the Press an account was published of an attempt to rob the orchard of B. B. Barney. The attempt was frustrated by Mr. Barney's foreman frightening away the thieves and discovering the fruit in sacks. Sunday, a successful raid was made on the orchard of Mr. Bryant, who lives near Mr. Barney. Twenty-five Navel trees were stripped clean of fruit. As yet no clue to the thieves has been discovered. The loss to Mr. Bryant is fully \$100. More money in fruit has been lost this season through incursions of tourists and other thieves than to support a mounted police system for three years. There is evidently a gang working the orchards in Riverside, and growers having groves in isolated sections should look out before it is too late. Since the above was in type we have ascertained that on Saturday night, A. M. Denig's orchard on Magnolia avenue was entered and over \$200 worth of Navel taken.

CROSS FERTILIZATION.—Valley Echo: Mrs. J. J. Evans has handed us a cluster of oranges showing the tendency of this fruit to grow "sports." Two years ago this tree bore Navel oranges. A year ago no observations were taken. This year no outside navel-mark is visible, but some of the fruit has the characteristic embryo orange inside. They all, however, show a mixture with the Blood variety, the red showing plainly in the juice capsules. Doubtless the Navel blossoms were fertilized by Malta Blood pollen.

San Joaquin.

EDITORS PRESS:—We have had our alternate sunshine and shower. Our hills and plains are brilliant with flowers. The grain, which came on slowly at first after warm weather set in, having been somewhat stunted by the unusual cold, is now doing well, and though not so forward as usual in years called "good," the prospect is fine for a fair-to-grand harvest. Feed in the foothills is good and stock of all kinds is doing well.—Mrs. J. M. K., Tracy.

EXTENSIVE FRUIT-PLANTING.—"R." sends the Stockton Independent a long account of a tour of inspection, which he made on the 9th instant, through lands being planted to fruit trees, vines and berries in the vicinity of Lodi. We give an abridgment of his report. Hon. B. F. Langford said that he had not planted any trees or vines on the home-ranch this year, but on a farm about four miles further up the river had planted 8500 peach trees, suitable for canning, drying and shipping purposes. Senator Buck, who bought 400 acres in the Langford Colony, had just finished planting the entire tract with varieties divided as follows: Silver prunes, 3750; French prunes, 3750; olives, 4380; peaches, Salways, 3000; M. & S., 3500; Early Crawford, 735; Tuscan Cling, 480; Mary's Choice, 200; Mother Porter, 1000; Selby's Cling, 4380. . . . A. T. Hatch has a section adjoining Mr. Buck on which about 30 men were at work, and I. H. Clancy, his foreman, said they would wind up the entire 640 acres in a few days, with 1400 olives as a border enclosing the whole body of land. Inside of this border will be two rows of White Adriatic figs, numbering 3000, while the body of the orchard consists of 11,400 Nonpareil, 11,400 IXL, 7000 Hatch's Favorite, 2400 Ne Plus Ultra and 200 Drake's Seedling almonds; 800 Orange Cling, 500 Lovell, 2000 Muir, 700 Sasquehanna, 600 Tu-can Cling and about 2000 other peaches; 100 Catherine prunes and 25 Simoni prunes. This land was plowed 12 inches deep and the trees planted 25 feet apart. . . . Close by, W. R. Strong & Co. have 320 acres under the superintendency of J. H. Andersop. These gentlemen are planting about 40 acres the present season, consisting of 1000 Navel oranges, 3000

assorted peaches, 1000 apples and 1000 apricots. . . . A mile or more westward H. J. McLean is planting 40 acres to Bartlett pears, 20 to assorted cherries and 20 to German and assorted prunes. Reed & Co. of Sacramento have 160 acres of this tract, and are planting the same to nursery stock, except 40 acres which are being planted to citrus fruit. . . . R. Franklin, four miles west of Lodi, has 80 acres planted to grapes. . . . Many other persons were mentioned as having set smaller areas with trees, vines and small fruit.

San Diego.

IN SAN JACINTO FIELDS.—Cor. Union, March 8: Glorious weather for the farmers. The wheat and barley, square miles of it, are flourishing like the green bay tree. . . . The alfalfa fields present a beautiful appearance. The rank, green stalks are about a foot high. San Jacinto alfalfa, be it remembered, grows without being irrigated and six and seven fine crops of hay are harvested each year.

WILD HOGS.—Among the cotton-wood forests that stretch along the San Jacinto river for so many miles roams a band of wild hogs, which offer rare sport for the hunters. One adventurous gentleman, seeing some young pigs asleep in the sunshine, laid down his gun, and slipping up to them with Indian cunning, seized one in each hand, while visions of roast pork danced through his mind. Upon the pigs delivering themselves of a brace of piercing squeals, the mother, a large and ferocious sow, rushed open-mouthed from a neighboring thicket. Nimrod had little time for reflection—dropping one of the porkers, he walked up the slanting trunk of a large tree, thinking that half a loaf was better than no bread—when the sow started up the tree after him! The hunter immediately lightened cargo by heaving overboard his remaining pig, which, falling a distance of 10 or 12 feet, was stunned by the shock. Its parent, having now no further object in climbing the tree, descended, sniffed her fallen offspring, and plunged into the thicket. The hunter, upon coming down, secured his pig and went home in triumph.

ORANGES AND HAY.—Mr. Alph Burgess brought to the Record office, from the Sanitarium in Paradise Valley, Wednesday, some of the finest oranges ever raised in this vicinity. In every point looked at by orange-growers they were perfect. They were Navel and Mediterranean sweets. Mr. Burgess also had barley hay three feet long and fine alfalfa fully two feet in length. This species of geranium, he says, is unusually abundant. In fact, the rains have been so well timed this year, a large hay crop is now assured. Hay is selling at \$30 per ton, but the large crop of fine grass is likely to send the price down to about \$10 to \$12.

San Mateo.

OLIVES AND WALNUTS.—Redwood Times and Gazette: Sickert & Billings have planted about 1000 olive trees this season. They intend to plant more of these valuable trees the coming season, also about 500 prune trees. Last year about 1000 walnut trees were planted on their place. We think Portola valley can claim the distinction of having the largest olive and walnut orchard in the county.

Santa Barbara.

AUSTRIAN MUSTARD.—Lompoc Record, March 10: Mr. McKay has received from Austria a quantity of the Austrian red mustard said to be superior in quality to the English mustard and equal in its yielding qualities. Wm. Shean has contracted to put in 20 acres at 3 cents per pound for the yield. If this seed is what is claimed for it, and this section proves favorable for its production, the farmers may be benefited by the change. The seed is small, only a size larger than the wild black mustard.

Santa Clara.

A BAD BIRD.—San Jose Herald, March 13: A vicious rooster belonging to M. F. Keane, who lives on Santa Teresa street, on Sunday afternoon attacked a lady and felled her to the ground, one of his spurs entering her neck to the depth of half an inch, and before she could rise he badly lacerated one of her hands. Regaining her feet and seizing a stick, she put the ill-mannered bird to death. The rooster had been noted for his many successful conflicts with other barnyard fowls and with dogs and cats, but never before attacked a woman.

INCORPORATED.—Record Union, March 20: Articles of incorporation were yesterday filed with the Secretary of State of the Mountain View Canning Co., incorporated for the purpose of buying and selling green and preserved fruits and vegetables, etc., and the carrying on of a general mercantile and commercial business at Mountain View, in the county of Santa Clara. Directors—Daniel Flint, O. P. Askam, J. E. Williams, John Bergin, H. McCleary, D. T. Bateman, Mountain View; W. A. Nygh, S. F. Capital stock, \$50,000, divided into 5000 shares of the par value of \$10 each.

Solano.

A NEW COMPLAINT AGAINST THE ENGLISH SPARROW.—Dixon Tribune, March 17: Owners of brick buildings are making war upon the English sparrow. A great many of these voracious little birds have made their homes in Dixon. They usually build their nests in brick walls. They peck the mortar away until the bricks are generally loosened.

THAT MYSTERIOUS CATTLE AILMENT.—P. W. Dillon, one of the farmers near Benicia who lost so much stock by what the veterinary sur-

geons termed anthrax, insists that the disease has not been correctly diagnosed, and as an evidence of it, says horses that were stall-fed and kept in the stable were not infected when brought into contact with animals in the last stages of the disease. Anthrax is known to be contagious. He also says that ducks, geese, goats and sheep have died in the same mysterious way, and anthrax has never been known to attack poultry. The town trustees of Benicia are not entirely satisfied with the report made by the veterinary surgeon, and propose personally to inspect the locality in which there has been so much fatality among the stock, spread canvas on the ground, catch the deposit of smoke and gas from the smelting works for a few nights, and have the same analyzed.

Shasta.

BATTLE CREEK ITEMS.—Cor. Cottonwood Index, March 15: A few fruit trees in this vicinity are beginning to bloom. Loomis & Cook are planting out a young orchard this spring, over 400 trees, consisting of apples, pears, prunes and peaches. They have an orchard of bearing trees, and know that fruit will pay. Last year they raised fine fruit, some of the apples and peaches weighing a pound each.

Sutter.

HORTICULTURISTS ORGANIZE.—Sutter Farmer, March 16: The adjourned meeting of the horticulturists was held on Wednesday afternoon at the courthouse. The following citizens were present: H. Luther, J. J. Pratt, R. C. Kells, J. H. Stewart, C. E. Williams, A. D. Cutts, Francis Hamlin, H. P. Stabler, Geo. Ohleyer, B. F. Walton, B. G. Stabler, J. P. Onstott, S. McClure, C. C. Newkum, J. B. Wilkie, F. Hause, T. F. Giblin, and A. B. Van Arsdale. The Committee on Constitution and By-Laws made their report. This was adopted seriatim with a few amendments. The following permanent officers were elected: Pres., B. G. Stabler; V. P., P. L. Bunce; Sec., H. P. Stabler; Treas., Geo. Ohleyer; Entomologist, H. P. Stabler; Directors, B. F. Walton, C. E. Williams and R. C. Kells. The election being over, J. J. Pratt, Sup't of the Sutter cannery, read an essay which was highly commended, and received with thanks by the society. A committee was appointed to confer with Prof. Hilgard of the State University in relation to establishing an experiment station in this, the central portion of the Sacramento valley. Membership fees were fixed at \$2.50, dues to be fixed hereafter. Most of those present signed the roll as members. The meeting was harmonious and enthusiastic and did a good day's work in a good cause. The third Wednesday of each month was selected for regular meetings.

Tehama.

GLANDERS AGAIN.—Red Bluff Sentinel, March 17: Dr. G. H. Bailey, who is recognized as one of the best veterinary experts on contagious diseases, was sent to Col. O. E. Moore's ranch near Kirkwood by the county supervisors to examine horses which had been reported to Supervisor Hook as having some peculiar disease. Dr. Bailey, with Supervisor Mooney, examined the stock of horses and found several glandered ones, which the manager of the ranch agreed to destroy at once.

Tulare.

ONE OLIVE.—Visalia Delta, March 15: Wiley Watson's olive tree, which is nearly 30 years old, has borne regularly every year since the first crop was produced. Cuttings have been taken from the tree frequently by residents of Tulare county, and so great has been the demand this year that fully 3000 cuttings have been cut from it and planted in the valley and foothills.

STALLION SHOW.—On Saturday last the owners of fine stallions and their progeny paraded the same on the streets of Visalia. A few days before an exhibit was made in Hanford. The stock shown here was from all parts of the county, and will compare favorably with the choicest in the State. There were fewer draught horses exhibited than on previous occasions of this kind, although there are numbers of such in the county. Road stock, however, is plentiful, and most of those on exhibition were of this class. On previous occasions there have been a greater number of stallions in the parade, but never before so large a proportion of fine animals. Tulare county farmers and stock-raisers have been breeding to the best strains for several years past and the result is a marked improvement in the character of stock in general. The mustangs once so plentiful are becoming extremely scarce. A number of the stallions exhibited are from imported sires secured at great cost, and are in no way inferior to them. The display was a creditable one, and one in which horsemen were greatly interested.

Yolo.

SETTING THEM TO STAY.—Yolo Mail, March 17: Geo. Biner, four miles northeast from Woodland, has a fine young orchard and vineyard of about 10 acres already started. This season he will make the experiment of planting eight acres of apricots where they will remain. This will not only save transplanting but he believes will make stronger, healthier trees by reason of not having disturbed their roots. The experiment will be watched with interest by fruit-raisers.

MERINO HORNS.—At Armstrong & Alge's meat market is a ponderous pair of mounted horns from one of Frank Bullard's premium Spanish merino rams. The ram was one of the great-great-grandfathers of Mr. Bullard's flock and was valued at \$300. The horns are fully

16 inches in circumference at the base, and over two feet long each.

Yuba.

ENGLISH SPARROWS.—Marysville Appeal: The other morning, W. F. Peacock, who is an authority on birds, pointed out a number that had then alighted on a building on Second street. "Those," said he, "are the English sparrow. They are the first ones of the kind which I have seen here, and as they are among the most destructive birds there are, their presence here will be the means of exciting the fruit-growers and gardeners to some action looking to their destruction. In my judgment, it would be well for the city authorities to take some steps toward exterminating them. In the lower counties they have caused considerable trouble lately, and in the East it is not an uncommon thing for a small number of them to kill a tree in a few minutes. They are also killers of their kind, driving almost every other sort of bird from the vicinity in which they come."

ARIZONA.

ASH TREES FOR SHADE.—Phoenix Herald, March 8: W. J. Murphy of the Grand Avenue Co. has contracted with Fowler Bros. for 1000 two-year-old ash trees, which are to be set along the Grand avenue. This will be a great improvement for that part of our city. The ash is rapidly supplanting cottonwoods as shade trees about town, and nothing better has yet been found for our avenues and drives.

LIVE-STOCK INTEREST.—Phoenix Herald: Mr. Miller's herd of thoroughbred Herefords, Mr. Brill's herd of thoroughbred Holsteins, and Mr. Trask's herd of thoroughbred Galloways are not surpassed in any country. The facilities for breeding fine stock here where it can run on pasture the year around, if so desired, are so much superior to any country where it is necessary to stable the cattle, and even grain-feed them to get them over the winter, that those who have devoted themselves to the rearing of fine stock are rapidly securing a foothold here while property is comparatively cheap. To-day, for the age of the business here, we can show an unusual quantity of pure-blooded stock, and this is as true of horses as of cattle.

OREGON.

BUTTER FOR ASIA.—Oregonian, March 9: Mr. Wm. Dunbar, who lately returned from China, has orders to send several tons of Oregon butter over there as soon as the price is low enough. There is a market over there for a large quantity of butter which is supplied chiefly at present from Holland and Italy, the butter being put up in tins. This coast being so much nearer should supply that market, but Oregon is not likely to do much toward it, as we are importing large quantities of California butter at present.

SHEEP ON A RAMPADE.—Early last Friday morning as a band of sheep belonging to W. W. Spaulding was being driven up First street, on their way to the slaughter-house, they seemed seized with an insane desire to get something to drink, and, smashing two squares of glass out of the doors of Ginochio's liquor store, they passed in like a flood. The fumes of liquor affected them as much as a human, and, coming out, they rushed across the street, jumped through the glass door of Blumauer's drug store, and invaded the building. The smell of castor oil and bisulphide of carbon did not suit them, so a lot of them went upstairs to Thwaite's photograph gallery. The frantic efforts of herders and collie dogs at length succeeded in starting the sheep on the broad road to the slaughter-house.

ENSILAGE.—Mr. Jackson, who lives in sight of Oregon City, called this week with a specimen of ensilage that he made on his farm and is feeding with success to his stock. His silo is 12x20 feet and high enough to hold a large quantity. The specimen left is English rye grass that was put in whole and is preserved in good order. It is fragrant and cattle like it. He ensilaged a large quantity of corn, which is all fed out or he would have brought a sample in. It has proved a complete success with him, and he will write in full concerning the way he preserved the fodder and the kinds of feed he preserved.

MUTTON AND WOOL.—Rogue River Courier: Wm. Chapman, living in the southern part of Josephine county, last year leased a band of 500 sheep to other parties, receiving one-third of the profits, both of wool and increase. The wool was sold for \$149; 260 lambs, at \$2 per head, amounted to \$520, which, added to the first sum, gave Mr. Chapman \$669 as his net gain. Count his band of 500 sheep worth \$1200; out of a \$1200 investment he received a gain of \$669, was out neither time in their care nor money for feed. This is decidedly big interest. What country can beat this record in sheep raising? Others are as good, but great loss is generally sustained during winter months. Mr. Chapman said his sheep wintered well, but few dying.

Carriages.

We are receiving 10 carloads of Carriages, Buggies and Wagons from the Briggs Carriage Company of Amesbury, Mass., which will be sold at prices that will be satisfactory, considering style and workmanship. Quality of material guaranteed the best.

M. A. BRIGGS & CO.,

Mechanics' Institute Fair for 1888.

The Board of Trustees announce that the Twenty-third Industrial Exposition of the Mechanics' Institute will open in its grand exhibition building, bounded by Larkin, Hayes, Polk and Grove streets, on Tuesday, August 7, 1888, and will close on Saturday evening, September 15, 1888.

The past exhibitions held by the Institute have done more than all other means combined to illustrate the advance in inventions and mechanic arts upon this coast. The Mechanics' Institute of San Francisco was first organized in 1855, but it was reincorporated in 1869 under the provisions of a liberal Act of the Legislature providing for the formation of Mechanics' Institutes, Chambers of Commerce and kindred useful bodies. The designs and objects of the association, set forth in its articles of incorporation, are most important and useful to the commonwealth, and include the maintenance of a great and growing library of circulation and reference, the formation of classes and delivery of lectures for tuition, and the purchase of property and erection of buildings for any scientific, mechanical and literary purpose.

Article VI of its articles of incorporation reads as follows: "No shares of stock, nor any individual right in the property of this association, shall exist or be acquired during the existence of the association, but the property belonging to, and in the name of, the Mechanics' Institute shall be held in trust by the trustees for this association, and never be diverted from the purposes and intention for which it is organized."

All the profits and pecuniary results of the Exposition, library, property and enterprises of the Mechanics' Institute inure solely to public and useful ends and not to the private or personal benefit of any one.

The membership of the Mechanics' Institute is large, and it is supported by all classes; it is primarily an association of mechanics, and its exhibitions are emphatically expositions of Pacific Coast industry. During the past two years the management has greatly enlarged the scope of the fairs, which now include comprehensive exhibits of the natural products of our soil, the fruits of husbandry, also ores, minerals and timber, and other exhibits illustrative of the natural wealth of our State and coast.

Regarding the coming Exposition, it is the intention of the management to make every effort to surpass the successes of the last few years. Everything points toward a prosperous year. A large concourse of visitors from the East is expected, and the Exposition will furnish a grand opportunity of displaying the products of our workshops and manufactories, and of advertising the capabilities of the climate and soil of this coast, and its advantages for residence and investment.

The San Francisco & North Pacific R. R. Co., the North Pacific Coast R. R. Co. and the Pacific Coast Steamship Co. (Messrs. Goodall, Perkins & Co., agents), will transport exhibits free of charge, and the Southern Pacific Co. has also adopted a liberal policy regarding the exhibitions of the Mechanics' Institute.

The exhibition building is complete in all of its appointments. No charge is made to exhibitors for space. Steam-power and water furnished free. Arrangements are being made to secure art exhibits, pictures, statuary, etc., of unusual merit. A large orchestra of skilled musicians, including solo performers, will render a grand concert each afternoon and evening during the continuance of the Exposition. Other attractions and interesting features will be presented from time to time.

The rules and regulations governing the Exposition, premium-list and applications for space will soon be ready, and can be had or will be sent, with any further information desired, on application at the office of the Institute, 31 Post street, San Francisco, Cal.

A Pioneer Saddlery Establishment.

A RURAL representative had the pleasure of an interview with Mr. E. O. Robbins, Western agent for Smith, Worthington & Co., 40 Warren street, New York City, wholesale dealers in harness and saddlery goods. This house was established in 1794, and has been continuously in the same family for four generations.

R. F. Briggs & Co., importers and manufacturers of carriages, 220 and 222 Mission street, have handled a stock of fine harnesses from this house for several years. Their customers and especially horsemen have given an unqualified indorsement of their goods in workmanship, artistic taste and durability.

Mr. Robbins has been highly pleased with our climate and material prosperity, and feels keenly his good fortune in escaping the terrible blizzard that has swept over the East.

WATERING AUSTRALIAN DESERTS.—Chaff y Brothers, the founders of Ontario, in San Bernardino county, are reported to be making rapid progress with the new irrigated colony, which they are establishing on a large tract of land granted them by the Government of Victoria, on condition that they bring water on it. The enterprise is entirely novel in Australia and the easy-going Antipodes gaze upon the doings of the enterprising, go-ahead Americans with open-mouthed wonder. A large area has been planted in fruit trees and vines, and all the lots on the main avenue of the townsite have already been sold.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING MARCH 13, 1888.

379,441.—SNOW PLOW—L. J. Bergendahl, Pendleton, Ogn.

379,360.—MAPS—W. M. Bours, Stockton, Cal.

379,501.—SWITCH FOR ELECTRIC-LIGHT CIRCUITS—Brann & Kinney, S. F.

379,306.—OPERATING CABLE RAILROADS—Clement & Watriss, S. F.

379,372.—NON-POLARIZING CONSTANT CURRENT BATTERY—F. J. Crouch, Eugene City, Ogn.

379,512.—WINDMILL, S. M. Fulton, Galt, Cal.

379,399.—RAILROAD TIE—Jos. Jacobs, S. F.

379,319.—POCKET RECEPTACLE—S. Mendleson, Los Angeles, Cal.

379,348.—SEAL LOCK—Waldron & Boller, Folsom, Cal.

379,428.—STATION INDICATOR—J. W. Warhurst, S. F.

379,432.—COMBINED CHAIR, FISH-PLATE AND RAIL COUPLER—W. Wilt, Eureka, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

A Mower-Knife Sharpener.

Now that abundant rains have given prospect of a good growth of hay, interest is quickened in devices for securing the crop. The engraving on this page represents a man in the act of sharpening his mower-knives with the "Dutton grinder," the device being readily clamped to the wheel of any mowing machine, and with it any kind of a mower-knife can be ground, whether the sections are long or short. It is light, weighing but 20 pounds.

The essential feature of the grinder is its conrundum-wheel and its peculiar construction.

The Dutton Mower Knife Grinder.

There is a hole three inches in diameter in the center of the wheel, made water-tight by the flanges which clamp the wheel and hold it in position. When the machine is to be used, this hollow space is filled with water through a small hole in the side of one of the flanges, which hole is then plugged up. By turning rapidly the water is driven through the pores of the wheel, by centrifugal force, completely wetting its grinding surface, thus preventing the temper of the knife from being drawn and destroyed, which would be done if the wheel were used dry. The water coming from the inside prevents gumming or glazing of the surface. When a mower-knife is to be ground, one edge of the surface of the wheel is brought into contact with the bevel of the knife section, at its bottom. The wheel is made to pass along the bevel to the point of the section, being controlled with the left hand. When one side of a section is ground the wheel is swung so that the outer edge of its surface is brought in contact with the bevel of the adjoining section, which is then ground in the same way.

Other information about the grinder can be had by addressing the manufacturers, the Higginum Manufacturing Corporation, who have an announcement in our advertising columns.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl St., New York.

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land? DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost? DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10 acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

A San Joaquin Valley Farm.

A RURAL representative on a recent visit to Stockton visited the "Home Farm" of Mr. L. U. Shippee, president of the State Agricultural Society. This tract of land, containing about 1000 acres, lies seven miles northeast from the city of Stockton, and may be classed as a representative California farm.

Twenty years ago the waters of the Calaveras river during the winter season flooded a large portion of this section, rushing madly through tule, willow and swamps. The pioneers built levees, enlarged and straightened the river-bed, and during all these years this section has been noted as one of the most productive and fertile sediment lands in the great San Joaquin valley. The road leading from Stockton to the "Home Farm" is a turnpike and graveled. Each side of the road and through the lane to the farmhouse is lined with stately sugar pines from 10 to 30 feet in height. On a slightly elevated knoll is a two-story house surrounded by numerous outbuildings, a vineyard and orchard in which are mammoth fig trees and the evergreen orange. This is the breeding farm for several other ranches, aggregating over 30,000 acres, a goodly portion of which is cultivated.

This tract is fenced into large and small inclosures with a view to breeding fine stock of various kinds. There is a lack of symmetry in the arrangement of the large buildings and stables, and they seem to have been constructed and extended from time to time in any direction to meet the demand for additional quarters. Leading from the main stable is a one-fourth mile track by the side of which was a long line of paddocks, while at a short distance on a slight elevation are sheds for sheltering the merino sheep and thoroughbred cattle. It seems to have been the idea of Mr. Shippee to establish a breeding farm where all classes of thoroughbred stock could be grown, adjacent to the city of Stockton, his residence, so that the enterprise could be under his personal supervision. Twenty years ago he commenced importing thoroughbred merino sheep and has continued to improve his flock by periodical importations, and now has 500 registered merino sheep that have been known and recognized as one of the finest and most meritorious flocks in the United States. Of graded sheep he keeps from 25,000 to 30,000 annually. In rearing jacks and jennies he has been very successful, as his first importations were of the best known strains. Mr. David Reavis of Chico purchased three jacks at the "Home Farm" on the 7th inst., for \$7000, and was offered a good advance on his purchase before leaving San Joaquin county. There is now a herd of 21 and the jack at the head, over 16 hands high, is but one remove from a famous jack imported from Spain. In noted breeds of poultry and leading classes of hogs the "Home Farm" is well stocked.

During the last ten years, Mayor Shippee has naturally drifted into breeding horses, and has four distinct classes, viz.: draft, carriage, roadsters and trotters, with noted stallions for each class. Hawthorne by Nutwood stands at the head of trotters, a Blackhawk for roadsters, a horse resembling the Cleveland bays but with more bone for carriage horses, and an imported Scotch for draft horses. He has now a herd of 400 head of horses, and is the third largest breeder in this State.

Although Mr. Shippee is president of the San Joaquin Savings and Loan Society and Mayor of the city of Stockton, with the assistance of an able corps of experienced and intelligent horsemen, he manages this great breeding establishment with commendable results. During the last year he scored several notable triumphs with his string of trotters, and the teams of mules, draft, carriage and roadster horses bred by him at the "Home Farm" are probably second to none on the Pacific Coast.

The growing demand for horses for specific purposes, and the science of combining qualities and "nickings," has become a study among a large number of our leading citizens, and with the growth, social development and attractions of our common country, fashionable and speedy breeds of horses are in growing demand at enhanced prices.

MONOPOLIES.—Judge Grant of Mariposa county, an old subscriber of the RURAL, writes: "Your article on strikes and monopolies pleases me. You say there is a remedy. What is there but the strong arm of the law and armies to enforce it?" The remedy that we foresee is the force of public opinion crystallized into such laws as may be necessary. The enforcement of these laws will be accomplished by something stronger than armies—the popular will of the American people. We have confidence in this power and we invoke it. It will be manifested in ballots, which, on this side of the world, can accomplish more than bullets.

MERCED LOTS.—We gave recently a long account of the opening of the new irrigation works in Merced county, which, besides bringing abundant water for irrigation of agricultural lands, is to supply the town of Merced with water for fountains as well as for domestic use. The natural result of this is a movement in town property in Merced, and, appreciating this fact, the Pacific Improvement Company orders a sale of Merced lots under the management of Briggs, Ferguson & Co. An attractive advertisement in this issue gives full particulars. The announcement should receive the attention of those interested in town property in promising locations.

EXPLANATION.—Cl. for clear; Cy. cloudy; Fr. fair; Fy. foggy; — indicates too small to measure. Temperature, wind and weather at 12.00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

The Best Drier

Does the best work with the least labor and with the least expense for fuel. It has a single drying chamber in which the draft moves horizontally either way, alternately, lengthwise of the chamber. The hot-air draft is admitted into the chamber at the proper temperature, and in its passage as far as the middle it is reinforced, as fast as it tends to decline, by means of radiators within the drying chamber connected with the furnaces in the heating chamber. On reversing the draft at intervals the drying process is thoroughly equalized throughout the chamber, and no injury occurs to the first fruit or material with which the hot-air draft comes in contact. All the heat generated is utilized. It is charged by means of cars containing the material to be dried, which remain in the chamber during the process of drying. There are no sliding or swinging doors to the chamber. The cars are put in and withdrawn from the chamber without letting in a deluge of cold air, or in any manner interfering with the draft or drying process. The cars, no matter how large or heavily laden, are moved easily by one person. The largest sized drier of this kind, although having a capacity of 50 or 100 tons to the charge, and having a forced or exhaust wheel draft, can be reduced in a few minutes to the smallest sized fruit-drier having a natural draft and the heating facilities and quantity of fuel required for the lesser drier are also quickly and successfully reduced to the minimum. This drier is in no danger of burning, as the heating apparatus nowhere comes in contact with woodwork. The apparatus used is all well made and is durable, simple in construction and is easily understood and easily managed. It has no automatic or complicated gearing whatever, or other machinery of any kind except such as is required to run the exhaust wheel of the largest sized driers. The chamber has openings only on one side and all the work of changing the trays or material is done on one floor. It is adaptable to any kind of fuel that can be used for heating or making steam, and will dry anything that requires to be dried in any quantity and as quickly as it is desirable to have it done. It can be constructed on a large or small scale and will work as well on a small as on a large scale. It is especially adapted to raisin vineyards and fruit and hop ranches, large or small, as well as for companies, communities or colonies. A large one would answer for a tract of country several miles in extent. The cost of construction depends on the size and the purpose for which it is to be used. In a short time a more complete description of this drier, with illustrations, will be found in this paper; until then parties inquiring should address, Agent of the Best Drier, P. O. Box 2361, San Francisco.

SPANISH INSTRUCTION.—Prof. De Philippe's new method of teaching the Spanish language is a work which by its entire practicability and simplicity commends itself to any one desirous of acquiring a thorough knowledge of the Spanish tongue as it is used in all ordinary usages and customs of every-day life. The long and eminently successful experience the professor has had as teacher has enabled him to produce just such a work as his "Simplified New System of Acquiring the Spanish Language"—the best of its kind. Our increasing social as well as commercial relations with the Spanish-speaking people of our sister republic of Mexico render just such a work of peculiar interest to Californians.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, etc.,

Remedies for their extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by DEWEY & Co., publishers, 220 Market St., San Francisco.

A Rare Chance.

The Gabilan Rancho, situated in Monterey county, containing 7665 acres, is offered at \$38.50 an acre, for 30 days, on long time and easy terms. Address, J. C. HOAG, 312 Van Ness avenue, San Francisco.

Buena Vista Rancho.

A portion of this Rancho, suitable for mixed farming or dairying, containing 1672 acres, will be offered for 30 days at \$35 an acre, one-third cash, balance in three years. Address J. C. HOAG, 312 Van Ness Avenue, San Francisco, or TYLER BEACH, San Jose.

The Melbourne International Exhibition.

Australia celebrates the centenary of her settlement by a grand International Exhibition at Melbourne, commencing August 1st next and continuing for six months. Congress has appropriated \$50,000, will appoint commissioners to represent the United States, and it is hoped that very many private firms will make exhibits. The government of Victoria controls the exhibition and gives space and steam for motive power free. The exhibition building and annexes will cover 24 acres of ground, and the display, both local and from foreign countries, will be the largest ever seen in the southern hemisphere. Goods for exhibition are admitted duty free. Australia is a rich and growing country. American goods sell well there, and the comparative nearness of Australia to America should inspire our business men to control her markets. Mr. John M. Ives who for the past three years has been in the antipodes as manager for the well known Safe Cure House of H. H. Warner & Co., has just returned with letters from the chief secretary and commissioners; also blank applications for space, which he will be pleased to send free on application to him at Rochester, N. Y. Applications should be made at once, as goods must be in position not later than July 1st next.

Who Is It?

Who sent us a postal note from Middletown, Lake county, without sending his name?

Who did the same thing from Selma, Fresno county, some time ago?

It is impossible to give proper credits unless people will send their names with the remittance. Let all subscribers take notice.

P. S.—If people wonder why their letters are not answered or the paper stopped when they omit the postage stamp on their letters, or misdirect them, or give them to parties who never mail them, whose fault is it?

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.
JOHN G. H. LAMPADUS—S. L. Obispo & S. Barbara Co.'s.
G. W. INGALLS—Arizona Territory.
WM. WILKINSON—Fresno Co.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm
better each year, is the problem for the farmer.

FERTILIZE! FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.
UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.
Dr. J. KORBIG—Dear Sir: I have analyzed your sample
of "Nitrogenous Superphosphate," with the
following result:
Soluble Phosphoric Acid.....12.90 per cent
Reverted Phosphoric Acid......95 "
Insoluble Phosphoric Acid......2.83 "
Potash......2.23 "
Ammonia......1.87 "
Nitric Acid......2.95 "
The above amount of Nitric Acid is equal to 0.85
per cent Ammonia, therefore, total of Nitrogen calculated
as Ammonia, 2.72 per cent.
This Fertilizer is a Valuable Manure for vine-
yards, orchards, gardens, farms, and I recommend its
use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

Dr. J. KORBIG, San Francisco—Dear Sir: I take pleasure
in adding my testimony to that of Dr. Schneider as
to the high quality of the "Nitrogenous Superphosphate"
Fertilizer, analyzed by him at your request. It is a high-grade article, and as such
returns the user a better money value than a low-grade
H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.
Endorsed by the Grange and Farmers wherever used.
The Cheapest and Best.
Put up in 1-pound, 5-pound, and 5-gallon Tins.
Every Can Warranted.
This Poison has been on the market less than two years, yet in
this short time it has gained a reputation of "Sure Death,"
equaled by none. By its merits alone, with very little advertising,
it is now used extensively all over the Pacific Coast, as well
as in Australia and New Zealand.

I CURE FITS!
When I say cure I do not mean merely to stop them for
a time and then have them return again. I mean a radical
cure. I have made the disease of FITS, EPILEPSY
or FALLING SICKNESS a life-long study. I warrant
my remedy to cure the worst cases. Because others have
failed is no reason for not now receiving a cure. Send
at once for a treatise and a Free Bottle of my infallible
remedy. Give Express and Post Office.

MYERS' SLIP SHARES
FOR SALE BY
D. N. & C. A. HAWLEY,
2 & 4 Sutter St., cor. Market San Francisco

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 21, 1888.

Continued fair weather caused freer trading in farm produce, but under heavier receipts vegetables shaded off. In cereals the market was of a mixed character, corn and oats ruling strong and slightly higher, and wheat and barley lower on Call, but for sample parcels, except on forced sales, there was no change. The European and Eastern markets were quiet, but the tone generally for wheat was firm. To-day's London cable was as follows:

LIVERPOOL, March 21.—Wheat—Inactive. California spot lots, 65 sd to 68 8d; off coast, 33s 3d; just shipped, 33s 3d; nearly due, 33s 3d; cargoes off coast, fair inquiry; on passage, not many bids in market; French country markets, mostly turn dealer; wheat on passage to Continent, 240,000 qrs.; wheat and flour on passage to U. K., 1,865,000 qrs.; wheat and flour in Paris, quiet.

Foreign Review.

LONDON, March 19.—The *Mark Lane Express*, in its weekly review of the grain trade, says: The English wheat trade is not improving. The sales of the week were 77,227 quarters, at 30s 6d per quarter, against 41,865 quarters, at 32s 11d, during the corresponding week last year. In foreign trade stagnation also prevails. The imports of wheat are smaller, but the proportion of flour is large and keeps down prices. The freight per steamer on wheat from New York to Liverpool is only 2d per quarter, and there is a prospect that wheat will again be paid for as ballast. Flour barely maintains its former values and maize is slow to sell. Grinding barleys are against buyers at 3d dearer. Oats were in small supply during the week, seven cargoes being sold, two withdrawn and two remain. At today's market English and foreign wheats were weaker at a decline of 6d. Flour was in large supply at 3d to 6d lower.

California Products in Chicago.

CHICAGO, March 17.—Choice fruit is rather scarce and firm. More or less fruit of all kinds is coming in and is somewhat off quality. This rules slow. Good fruit has a good selling demand and is selling at much better prices. The extension of the strike to the Santa Fe railroad, it is feared, will reduce the receipts of oranges from California. The greater part of that fruit is coming over the road mentioned. If the delay affects the consignments it will be the cause of firmer prices. The following prices ruled to-day: California Riverside oranges, \$3@3.25; other California kinds, \$2.75@3; California No. 2, other kinds, windfalls, \$1.75; California Navel, Riverside, \$5.50@6; California Navel, \$4.50@5; California lemons, firm, but rather slow, \$1.50@1.75 per box.

The California dried fruit market is rather easy. There is some demand and there are also fair offerings of the several lines. Buyers, in looking around, are somewhat reluctant about paying the prices which are asked, and sales are, therefore, a little slow, and the market is inclined to be rather easy. At the same time, so far as prices are concerned, there is no material change to note. We quote: Peaches, sun-dried, in sacks, 1/2 lb. 11@12c; do, evaporated, unpeeled, in sacks, 1/2 lb. 13@15c; do, boxes, 1/2 lb. 13@15c; do, peeled, in sacks, 1/2 lb. 17@22c; do, in boxes, 1/2 lb. 22@25c; apricots, sun-dried, in sacks, 1/2 lb. 10@11c; do, evaporated, in sacks, 1/2 lb. 12@16c; plums, pitted, in sacks, 1/2 lb. 11 1/2@12 1/2c; prunes, small, 1/2 lb. 8@10c; do, fancy large, 1/2 lb. 13@14c; nectarines, according to quality, in sacks, 1/2 lb. 5@12c; raisins, loose Muscadel, two-crown, 1/2 box, \$1.35@1.45; do, three-crown, 1/2 box, \$1.50@1.65; do, London layers, 1/2 box, \$2.30@2.35.

Sales of hops are about moderate, the market in about all respects the same as lately quoted. Good to choice grades meet with moderate and steady trade. They are also steady, for the supply is rather small. Common qualities are rather neglected, being very little called for. Pacific Coast, choice, 1/2 lb. 12@14c; do, common to prime, 9@12c.

Beans were without quotable change, either in tone of the market or prices. There is a small jobbing trade, but there do not appear to be any large lots selling. The supply on the market is small. California, according to quality, \$2.25@2.85.

Eastern Wool Markets.

BOSTON, March 16.—There have been very few features of a new or interesting nature to notice in the wool market during the week. Business has been almost entirely suspended since Monday last. The tone of the market is firm for desired grades, but much of the Territory wool offering, and some other kinds, are of such undesirable character that dealers are obliged to accept prices that show considerable concessions. The only activity in the market is seen in medium wool. Total sales of foreign and domestic were 2,296,500 lbs. Quotations are: Ohio and Pennsylvania X and XX, 30@32c; No. 1 Ohio fleeces, 35@36c; Michigan do, 28@29c; No. 1 Michigan fleeces, 35c; combing and delaine fleeces, 32@38c; unwashed combing, 22@29c; Territory, 18@21c; Texas, 12@20c; Kentucky, 28c; California spring, 14@21c; do fall, 8@17c; unwashed and unmerchantable fleeces, 10@23c; super and extra pulled, 24@25c; Australian, 35@41c; River Platte and Carpet, private terms.

NEW YORK, March 16.—Wool is steady. Domestic fleeces, 22@37c; pulled, 18@40c; Texas, 13@22c.

Eastern Grain Markets.

CHICAGO, March 21.—Wheat steady; cash, 72 1/2c; April, 72 1/2c; May, 71 1/2c. Corn steady; cash and April, 46c; May, 49 1/2c. Oats, steady; May, 30 1/2c.

NEW YORK, March 21.—Wheat—90 1/2c for cash, 89 1/2c for March, 88 1/2c for April, 89 1/2c for May, 88 1/2c for June and 87 1/2c for July.

California Raisins.

NEW YORK, March 19.—California raisins are beginning to reflect an upward tendency. Sales were made Saturday of some 3500 boxes of the best

brand—three-crown—loose in bulk at \$1.85, though a considerable portion was at an advance to \$1.95. This latter price is now firmly required for Lion brand, bids having been made in instances of \$1.90 which were declined. The stock is closely concentrated and interior markets are said to be about bare. The position of Malaga warrants this increase in the value of the domestic. The stock of the former on the 18th inst. was placed at 19,000 boxes.

Local Markets.

BAGS—The pool have marked prices up another point. Their ultimate figure is said to be 10c for Calcuttas. The market is quotable, for June-July delivery, 8 1/2@8 3/4c.

BARLEY—The market ruled weak throughout the week, owing to buyers bidding low and a strong selling pressure so as to save expenses. For futures, trading on Call was fair, with cross orders made at lower prices. To-day's record of sales is as follows: Morning Session: Buyer season—200 tons, 8 1/2c; 600, 8 1/2c; 200, 8 1/2c. Buyer 1888—100 tons, 8 3/4c; 400, 8 3/4c. Afternoon Session: Buyer 1888—200 tons, 90c @ ctl.

BUTTER—Heavy receipts, warm weather, and buyers being offish, the market shaded off, closing weak. Last year at this time there was heavy panning, but so far this season there has not been any.

CHEESE—Receipts are coming in more freely, and naturally the market is tending down, for buyers take sparingly and sellers are more anxious.

EGGS—The market gained in strength, but with freer importation of Eastern, there is a weaker feeling. The consumption continues large.

FLOUR—The market is steady, with a good demand ruling.

PROVISIONS—Hog products of all kinds are very firm, with further advances looked for in lard, hams and bacon.

WHEAT—The market for sample parcels has partaken somewhat of a deadlock character—any selling pressure was met by lower bids, and a buying demand by higher askings and higher sales. Good to choice wheat is very scarce, with millers having considerable trouble in having their wants met even at \$1.37 1/2 to \$1.40. In futures, the market has been quiet, with sales on Call reported to be chiefly cross orders at lower prices, so as to get actual wheat for less money. At today's Call, the reported transactions are as follows:

Morning Session: Buyer season—800 tons, \$1.34 1/2; 100, \$1.34 1/2; 100, \$1.34 1/2. Buyer 1888—100 tons, \$1.42 1/2; 100, \$1.42 1/2; 100, \$1.41 1/2; 200, \$1.41 1/2; 900, \$1.42. Afternoon Session: Buyer season—200 tons, \$1.34 1/2; 100, \$1.34 1/2. Buyer 1888—400 tons, \$1.42 @ ctl.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Mar. 19, '87.	July 1 '87 to Mar. 17, '88.
Flour, qr. sks.....	3,417,931	2,762,235
Wheat, cts.....	10,529,152	7,048,440
Barley, cts.....	1,948,985	1,898,664
Oats, cts.....	115,691	131,802

Potatoes, sks.....	88,182	53,991

Cereals.

At brief intervals since October last *Bradstreet's* has given statements of the production, imports and exports of wheat in nearly all the wheat-growing and wheat-importing and wheat-exporting countries of the world, most of them for periods of 10 years, sometimes more, and in a few instances less. The averages for 10 years were given for each country—embracing production, imports, exports and supply, excepting a few unimportant countries where the crops are not officially reported, and which were estimated, as in the case of Chili, Egypt, South Africa, Tunis, Serbia and Mexico. The reports from remaining countries were taken from the official figures, and are regarded as approximately accurate. The population of Europe in 1886 has been given at 347,000,000, against 331,000,000 in 1880, and 289,000,000 in 1860, and 216,000,000 in 1830. The average yearly production of wheat of the world, for 10 years, has been about 2,010,417,924 bu., and the average wheat production of Europe for the 10 years ended with 1886 was 1,172,356,052 bu., annually. The average aggregate quantity of wheat left over for home use for the 10 years ending March, 1886, was 1,998,101,960 bu. for all the countries named, and for Europe the average quantity left for home use for 10 years ended in 1886, was 1,333,135,399 bu. The wheat-growing countries of Europe in the 10 years ended with 1886 exported a yearly average of 136,547,017 bu. of wheat to countries of Europe that produced less wheat than they consumed. The latter, besides importing from the wheat-exporting countries of Europe, imported from wheat-growing countries without Europe for the 10

years ended December, 1886, an average of 160,779,257 bu. of wheat annually, or its equivalent in flour, making the annual average from all countries imported by Europe 297,326,274 bu.

Advices from Australia are to the effect that there were there about 80 vessels chartered to carry wheat to the United Kingdom, and the demand for ships continued active. The surplus available from South Australia is now estimated at 425,000 to 500,000 tons, of which two-thirds, or say, 325,000 tons (1,400,000 qrs.) will probably find a market in Europe. During the past year (1887) the exports were 128,000 tons, of which only 199,827 qrs. wheat and 156 tons flour went to Europe, intercolonial markets thus absorbing 71,000 tons, and Europe only 57,000 tons. In Victoria the crop was not turning out so satisfactorily, owing to the rain, but it was expected that the surplus for export would reach at least 150,000 tons (650,000 qrs.), against an actual export in 1887 of 220,000 qrs.

According to Government returns just published the Russian wheat crop of 1887, including Russian Poland, was about 31,000,000 qrs. against 24,000,000 qrs. in 1886, and 28,500,000 qrs. in 1885. The rye crop had a surplus over 1886 of about 12,000,000 qrs. One peculiarity of the 1887 crop was the increased quantity of winter wheat as compared with 1886, the Azima wheats harvested last autumn showing 6,000,000 qrs. surplus over the previous year, but nearly 1,000,000 qrs. below that of 1885. There is a large quantity of wheat in Russia awaiting export.

Mail advices from the winter wheat sections are unfavorable and generally indicate considerable danger to the crop, with more or less damage, and an exceptionally fine season will be required to make a fair crop of winter wheat; thus far it has been the reverse. So far as the condition of the crop is concerned Kansas has kept at the head of the procession, with promises of a full average, though the acreage has been reduced materially, and we learn that the reserves of wheat back in farmers' hands are comparatively very small indeed, the local mills having paid such high prices early in the season that wheat was marketed very freely. In Missouri the condition is almost uniformly good, but the central district is suffering somewhat of late. Tennessee promises an excellent yield, but Kentucky is considerably below an average. From Ohio and Indiana we have more complaints of severe weather and trying effects on the crop than in any other two States in the winter wheat belt. Recent reports say in Indiana the late sown acreage is large, which is very unpromising. Winter wheat in Illinois has already suffered considerably, and it will take but a few days more of dry winds to seriously injure it. The Michigan crop is uneven, the growth being small, and it still looks short and thin. The month of March, as usual, is characterized by freezing and thawing, which cannot be otherwise than highly injurious to the young and tender wheat plant. In the Northwest the receipts have fallen off, and it is claimed that the wheat is being absorbed by millers quite rapidly, so that there is comparatively little accumulation there. A good milling demand is also reported for wheat in the Northwest from outside points, and stocks in country elevators are reported to have been reduced 900,000 bushels during the month of February.

Oregon mail advices continue to report Valley wheat at \$1.25 on wharf or \$1.27 1/2 f. o. b. (f. o. b. is an abbreviation of "free on board" of boat, steamer or cars as the case may be.) and \$1.20 on wharf or in warehouse, and \$1.22 1/2 f. o. b. for Eastern Oregon. Shipments continue to be made to this city quite freely, and as the steamship company dispatches a steamer every three days the 20,000 tons mentioned some time ago is being delivered quite rapidly in this city. The freight is 13 1/2c per cental. Crop advices, as a rule, are not as favorable as at this time last year.

In this State advices regarding the wheat crop are uniformly good, but then there is no certainty regarding crops, owing to the sudden climatic changes. In the local market choice wheat is held very strong and buyers are compelled to bid well up to have their wants met. The supply of good to choice shipping is scarce, as is milling wheat.

Barley has ruled weak throughout the week, owing to the bears hammering futures down on Call and dealers bidding lower for actual grain. Their plea is higher overland freights. The consumption in this State was never before larger, owing to its relative cheapness. Many stablemen use ground barley, bran and middlings, mixed with chopped straw in lieu of hay, owing to the high price of the latter. Of necessity they feed some hay, but as it is, as little as possible. The stock of barley in the State is decreasing quite rapidly; about the only places having much are the southern coast counties. B-tter prices are looked for before the close of next month. Choice brewing and choice Chevalier are scarce and for straight parcels full prices are obtainable.

Oats are strong. Receipts coming in are being warehoused. Last year Nebraska sent us heavy supplies, but so far this year none has come to hand from that source. It is stated that the stocks in Oregon and on Puget Sound are quite light and will be wanted chiefly for local use.

Corn made another advance the past week, closing strong at full figures. High markets at the East, higher overland freights and a good demand are the prime factors in promoting a better market with us. Rye and buckwheat are steady at current quotations.

Live-Stock.

Bullocks are a shade easier under freer offerings. The consumption will not be so large as soon as vegetables begin to come in freely with prices lower. Mutton sheep are barely steady. Hard grain-fed hogs are wanted at a slight advance. Milch cows move fairly free, with a good demand for the more choice. There are a few number of cows owned by dairymen than two years ago. In horses the market shows a decided improvement. Workhorses ranging from 1000 lbs up sell at from \$150 to \$300 each. A matched team of dark bays, good steppers, good appearance and kind disposition was sold the past week at \$1500. This is above the market, but the span were well mated and can be used for the family or road. Matched teams sell at from \$750 to \$1200. Single-footers, general utility, bridle and driving horses are more inquired for.

Fruits.

Choice apples are scarce and hard to get even at an advance on \$1.75. The general demand is only fair. Common apples are slow.

It seems that so far this season, an unusually large

quantity of common oranges have been sent to this market. They are sent, as a rule, in poor condition and without due selection. Being more or less dirty or black, and of irregular size, they sell low and slow. Good to choice oranges brushed off, and of attractive size and color, sell well and readily. The shipments up north have been and continue to be very heavy, keeping the more choice well-conditioned fairly well cleaned up.

In limes and lemons, there is nothing new to report. Good keepers of the former are wanted to fill shipping orders.

The stock of dried fruits is being steadily lowered, under a good (for the season) call. The supply here is, without a doubt, not sufficient to meet the coast trade, but then if values are advanced, too high consumption is curtailed. Dried apples are a shade higher, with a still higher range looked for.

London layer raisins are hard to get. Choice loose Muscadel are growing scarcer. The market for all kinds is gradually strengthening.

Feedstuff.

Feedmeal and cracked corn are higher. Ground barley is in good demand, as are bran and middlings. The supply of the three latter is quite liberal.

Hay is strong at full prices. While some choice sells at \$20, yet it is hardly safe to calculate on so high a price, for the sales are in a small way. At present high prices buyers confine their purchases as far as they can to actual week to week requirements.

Vegetables.

With clearer skies, warm days and foggy or dewy nights, garden truck grows rapidly. It will be only a question of a few days before all kinds of spring vegetables come to hand. Asparagus is lower and weak, as are green peas. Some of the latter were marketed from Alameda. Tomatoes are scarce, as are cucumbers. Mushrooms are in liberal receipt, but prices hold steady.

Potatoes weakened off still more, with a weak closing. Heavy receipts and only a fair call are the chief reasons for the decline. As spring vegetables come in, old potatoes move more slowly. New potatoes are coming in more freely, but as yet, sell high.

Under light receipts and a good demand, onions, as usual at this season of the year, are higher and strong at the advance.

Miscellaneous.

Poultry weakened off the past week, closing weak under free receipts and a fair demand.

Warm weather forced game on the market, causing a lower range in values.

In hops the movements have been very free for both home and shipping. Choice, straight parcels are very scarce, the bulk being irregular and generally poor.

Beans are steady, with a strong tone under light supplies.

In seeds the demand is falling off.

In wool there is nothing to report. The stock here is poor and undesirable and for which the only buyers are scourers. Medium and fine wools, if healthy, clean and lively, will command good prices this year.

San Francisco, March 21, 1888.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

The weekly shipment of butter from Novato, Marin county, amounts to about 15,000 pounds.

HORTON & KENNEDY'S

FAMOUS ENTERPRISE

WINDMILL

Self-Regulating
Is recognized as the
BEST.

Always gives satisfaction. SIMPLE, STRONG and DURABLE in all parts. Solid Wrought iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable babbitted boxes.

Positively Self-Regulating,

With no coil springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

HORTON & KENNEDY,

120 Front St., San Francisco.

H. H. H. HORSE

HORSE LINIMENT.

FOR MAN OR BEAST.

THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per Bottle.

For Sale by all Druggists.

This paper is printed with Ink Manufactured by Charles Eneu Johnson & Co., 500 South 10th St., Philadelphia. Branch Offices—47 Rose St., New York, and 40 La Salle St., Chicago. Agent for the Pacific Coast—Joseph H. Dorety, 529 Commercial St., S. F.

THE SAN JOSE

Orchard & Vineyard Cultivator.

The most complete and the easiest handled machine in existence. Made entirely of Iron and Steel, with the exception of the poles. Weight, 335 pounds. This is the only machine that can be handled on the sidehill. By means of the shifting pole and the adjustable teeth the machine works to perfection. These can be used to advantage on level ground also and the machine made to work fully a foot and one half nearer the trees.

All our machines are 7-tooth, 4-foot cut, but can be increased to 9-tooth, 5-foot cut by the addition of two extra arms, secured in a grooved casting, in the ends of the frame, by means of a set screw. This is an improvement not to be found in any other Cultivator, and Farmers having both Orchard and Vineyard will readily see its value, for when cultivating in the Vineyard the 7-tooth is as large as can be used, and when cultivating in the Orchard, by the addition of the two extra arms, the machine is increased to 5-foot and an extra foot of work accomplished with the same amount of team and without undue strain or exertion.

On the 7-tooth machine the outside teeth extend 8 inches outside the wheels, and on the 9-tooth 16 inches. These Cultivators are perfectly balanced by means of a lifting seat.

All our Cultivators have the PATENT STEEL SHOVEL BACK. This is one of the greatest improvements on cultivating tools ever introduced. The Shovel Back Sleeve is fastened to the Standard by a bolt in the lower hole, while in the upper hole we use a hard wood pin, which in case the Shovels catch a root or strike an obstruction, it breaks off and lets the Shovel fly back, so as to pass over. Nothing is broken but the wooden pin, which can be replaced in a minute's time.

We have Agents for these machines in nearly every town in the Fruit-growing districts of the State. Every machine guaranteed to give satisfaction. Write to us for circulars and we will refer you to our nearest Agent.

OUR MANUAL OF EVERYTHING FOR THE GARDEN

is this season the grandest ever issued, containing three colored plates and superb illustrations of everything that is new, useful and rare in Seeds and Plants, with plain directions of "How to grow them," by PETER HENDERSON. This Manual, which is a book of 140 pages, we mail to any address on receipt of 25 cents (in stamps). To all so remitting 25 cents for the Manual we will, at the same time, send free by mail, in addition, their choice of any one of the following novelties, the price of either of which is 25 cents:—One packet of the new Green and Gold Watermelon, or one packet of new Succession Cabbage, or one packet of new Zebra Zinnia, or one packet of Butterfly Pansy, or one packet of new Mammoth Verbena, or one plant of the beautiful Moonflower, (see illustration), on the distinct understanding, however, that those ordering will state in what paper they saw this advertisement.

FOR DESCRIPTION AND PRICE ADDRESS

LUTHER BURBANK, - - Santa Rosa, Cal.

SANTA ROSA NURSERIES.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Raising a large proportion of my seed enables me to warrant its freshness and purity, as see my Vegetable and Flower Seed Catalogue for 1888, FREE for every son and daughter of Adam. It is liberally illustrated with engravings made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Cory Corn, and a score of other valuable vegetables, I invite the patronage of the public. JAMES J. H. GREGORY, Marblehead, Mass.

ADRIANCE "BUCKEYE" MOWERS.

MAKE SURE THAT YOU BUY THE BEST MOWER MANUFACTURED.

One that will Outwear two of any other make of Machine.

One that is very Simply Constructed and the Lightest Draft.

One that will do Better Work than any other Mower made.

TRADE-MARK "BUCKEYE."

The Machines built under the Trade-Mark "BUCKEYE" by Adriance, Platt & Co., Poughkeepsie and New York, have secured and retained the preferences of a large majority of the farmers of the PACIFIC COAST DURING THE PAST 30 YEARS.

We have the exclusive right to the use of the Trade-Mark "BUCKEYE" as applied to Mowers and Reapers on the Pacific Coast, and caution farmers against any fraudulent attempts to steal our reputation.

BE SURE YOU GET THE

"GENUINE ADRIANCE BUCKEYE."

ADRIANCE, PLATT & CO.

The Adriance Buckeye Mower is made in two sizes:

Size B cuts a swath of 4 feet 3 inches.

Size A cuts a swath of 4 feet 6 inches.

The Adriance Reaper cuts a swath of 5 feet.

Each Mower is furnished with Two Complete Scythes, Two Extra Knife Sections, Two Extra Guard Fingers, etc.

Hodges' Haines' and Hodges' Case Headers, the Rice Straw-Burning Engines, Gold Medal Separators, Perkins' Windmills, Etc., Etc. Sole Agents' for THE "SCHUTTLE" FARM WAGONS, "TAYLOR" and "RELIABLE" SULKY RAKE.

HAWLEY BROTHERS HARDWARE COMPANY, San Francisco, Cal.

REPAIRS.

CONVENIENCE AND CERTAINTY OF PROCURING FIXTURES FOR REPAIRS are very important points for a farmer to consider when selecting a machine.

We caution farmers against buying Mowers on account of the CHEAPNESS IN PRICE. The failures in the past few years of manufacturers who tried to put CHEAP machines on the market have caused trouble in getting extra parts for such machines as were sold, and have fully demonstrated the truth of the old axiom,

"The Best is the Cheapest."

And the "BEST" is

The "BUCKEYE."

Each Reaper is furnished with Two Complete Scythes (or sickles, if preferred), Two Extra Knife Sections and Two Extra Guard Fingers, etc.

Screw Wrench, Punch, Cold Chisel, Oil Can, Bolts, Rivets, etc., and Whiffletrees and Neck Yoke, furnished with EACH Mower or Reaper.

Send for Special "BUCKEYE" Descriptive Pamphlet with Reduced Prices for 1888.

THE FLINT ROAD CART.

LIGHT, EASY RIDING, AND ALL MATERIAL.

GENERAL AGENTS FOR

Walter A. Wood Mowers, Reapers, and Binders.

WALTER A. WOOD MOWER, with Tilting Bar, is the most powerful mowing machine built; it will cut worse crops and cut them cleaner, and endure more severe usage than any other. It is capable of cutting through any growth possible for a mowing machine to deal with.

It will cut a larger acreage than any other, before becoming impaired by wear. Farmers relying on inferior mowers often suffer even more serious losses than frequent outlays for repairs, as breakages arising from cheap construction are most apt to occur at the very time when the work of the machine is most indispensable and when the damage from delay is most disastrous.

The strength of the Wood Mower is marvelous, yet is conjoined with mechanical movements so perfect that a man can draw the Mower in gear and mow grass.

As the driving wheels are very high and stand wide apart, the machine performs its work with a steadiness not found in any other Mower. This conduces not only to powerful cutting and durability, but to the comfort of the driver—it is the steadiest and easiest riding Mower in use.

The underdraft rod, instead of drawing by the pole, draws directly from the cutting apparatus to the horses' shoulders, and in such a manner as to leave just so much of the weight of the cutter bar on the ground as to insure close cutting and light draft.

All clutches, clutch gears, and shifter levers have been dispensed with, avoiding their wearing and slipping out of gear. In their stead are direct shifter cams on the drive wheels. These cams are not subject to any wear whatever. They are the perfection of simplicity, and communicate all the power of the drive wheels instantly.

The Mower is most admirably adapted for cutting down and tangled crops and any grass that is in bad condition. By a lever the guards can be raised and lowered instantly without the driver leaving his seat or stopping the machine, and without cramping the action of any part of the machine.

The Peen-to Peach and its Offspring.

Our Florida friends seem to have set far greater store by the peculiar peen-to or "flat peach of China," and to have secured much more from it than have Californians. The variety was brought to California many years ago.

grower, we are not aware that anything has been done with the peen-to in California.

In the Southern States the variety seems to have been more fortunate in attracting attention, and in addition to the direct use made of it, it is a parent of varieties which seem to be promising. The growth of seedlings from the

perennial tree, as he remarks concerning it, "of nearly evergreen foliage," from a sub-tropical country—a country with winter rains and dry summers. From the sub-tropical temperature to which the peen-to is native, Mr. Mott argues its fitness to Florida, and California can go a point further than Florida, for we have

Of seven seedlings grown by Mr. Bidwell, the fruit from four was round or oblong, like the usual shape of the peach, and three were flattened at stem and blossom end, like the peen-to. Two of the round varieties have been disseminated, and are known as Bidwell's Early and Bidwell's Late, as shown in the engraving.

PEEN-TO.

IMPROVED PEEN-TO.

BIDWELL'S LATE.

BIDWELL'S EARLY.

THE FLAT PEACH OF CHINA AND SEEDLINGS GROWN FROM IT IN FLORIDA.

The first fruit the writer saw in California was grown in the garden of Mrs. Longstreet in Los Angeles in 1878, but the fruit first appeared some time earlier than that date. The trees were brought to California from Australia, and from Australia also the variety was secured by P. J. Berckmans of Georgia as early as 1869. He grew his trees from pits. During the last ten years the peen-to has fruited in several parts of the State, and has been shown from time to time at the meetings of the State Horticultural Society by James Shinn of Niles. More than as a curiosity, or as a fruit relished by the

peen-to has received much attention from A. I. Bidwell of Orlando, Florida. They have been described and illustrated in the *Florida Dispatch*, from which source we derive our engravings and the data which we shall present. It is possible that California growers may like to try Mr. Bidwell's varieties and perhaps to test seedlings from the peen-to on their own account.

As to the origin of the peen-to, Mr. James Mott, author of "Peach Culture in South Florida," says, without question it is of that family found wild by Atchison, in Afghanistan, a

both the sub-tropical temperature and the alternate seasons, wet and dry, which Florida has not.

Our engravings show the peen-to as usually seen and the improved peen-to, a seedling grown by Mr. Bidwell in 1882 and fruiting in 1884. Bidwell's Improved Peen-to is described as follows: General appearance, fair; size, medium; shape, flat, somewhat thicker than the peen-to; color, pale yellow, tinged with green and washed with red; cling, flesh, white, fine grained, melting and juicy; sweet with slight noyau flavor; quality, good.

ings. A brief description of these varieties is given on another page of this issue. The great change secured by the growth of seedlings of the peen-to will interest many of our readers who are experimenting with California seedlings of different kinds.

THE Kansas City pork-packers propose to sue William G. Bartle of St. Louis for \$60,000 damages, originating in his depositions before the House Committee on Agriculture concerning the manufacture of lard and packing of meats from diseased animals.

CORRESPONDENCE.

Northern Santa Clara.

EDITORS PRESS:—In resuming my notes on Santa Clara county, I beg to notice briefly some of the important enterprises of the northern portion. At the same time I do not wish it understood that there are not many other industries in this section besides those I shall here mention that are equally worthy of public attention. In fact, the country around Mountain View and Mayfield will compare well in almost every respect with the most highly favored portion of the county, and the great wonder is that it has not kept full pace with the advancement which has been made south of it, which, of course, is not so conveniently situated as regards the distance and time to San Francisco.

The passenger on the cars, halting at the depot of Mountain View, is likely to form an opinion that the town is of much less importance than what it really is, from the fact that a considerable part, known as Old Mountain View, lies a mile west of the station, and is not seen at all in traveling through by rail. The population is variously estimated from 800 to 1000. A more enterprising spirit has taken hold of this community than formerly, as is evidenced by the number of new buildings being erected and the inauguration of several new enterprises. Among these is the Mountain View Cannery, with a capital stock of \$50,000, divided into 5000 shares. This is regarded as a most timely move, as a very large amount of fruit was necessarily wasted last year by reason of the lack of an establishment of this kind in the neighborhood. Among the most enterprising and prosperous patrons of the RURAL PRESS in the neighborhood, upon whom I called, is Frank P. Beverly, who is the proprietor of a 100-acre farm at the edge of town. He adopts the most approved methods of culture, and can show a balance on the right side of the ledger at the end of each year.

L. M. Ehrhorn has a model 30 acre orchard of pears, French prunes and other choice varieties of fruit trees. Fruit-growers may gather some valuable hints from the scientific methods pursued on this ranch. One theory I thought worthy of note, adopted by Mr. Ehrhorn, is to plow under the leaf mold every second year and cultivate the alternate season, whereas some pursue a different course. This idea not only appears possible, but is backed up by the most satisfactory results, as attested by a yield of 10 tons of apricots from only 500 three-year old trees, and five tons peaches from 300 trees of the same age. Another idea with which I was favorably impressed is Mr. Ehrhorn's plan of spading the ground up to a good depth around each tree instead of simply plowing as closely as possible and afterward scratching the ground over with a hoe, as is the custom of many. There is not only the advantage of better culture gained by this method, but there is less likelihood of bruising the trees when coming in contact with the plow or singletree, and what is of still greater importance than all other considerations named, it very greatly lessens the danger of gophers burrowing around the tree and destroying the same, as it is a well-known fact that this animal seeks the more compact portions of the earth rather than the very loose places to burrow in the ground.

Contrary to what might be supposed, women usually succeed in fruit culture in this valley quite as well as men. This conclusion has been forced upon me by an extensive observation during this season, and never more forcibly than in the instances of Mesdames M. M. Atwell and Wm. F. Perkins, both of whom have thrifty plantations near town and are appreciative readers of the RURAL PRESS.

I recently passed a very pleasant night with Capt. O. H. Wakelee and his estimable wife at their comfortable homestead, 2½ miles west of Mountain View, and near the foothills. The Captain here owns an orchard of 40 acres and a vineyard of 15 acres, and let the reader distinctly understand that by these terms is not meant simply the space of so many acres covered with indifferent varieties of fruit trees and vines, and the attention paid them of that careless character so common to this and every other section of our country. All the particular care and attention with which Mr. Ehrhorn is credited above, Capt. Wakelee may lay just claim to in the pursuit of fruit-growing. Every tree on his place, after having been carefully selected, was planted in holes dug three feet in dimensions, carefully and continuously cultivated in the proper season ever since; and, as might be naturally supposed, the orchard ranks hardly second to any in the valley, and of course, that means in the whole State. It is needless to enumerate the different varieties of fruit trees in this orchard; it should suffice to say that few kinds known to California soil and climate are found missing on this place. Capt. Wakelee produced apricots of the Royal variety, last season, which averaged from seven to nine to the pound, and a few measured eight inches in circumference. The writer, after having taken a careful survey of the entire valley, and studied the advantages to which each section lays claim, is of the candid opinion that the merits of the Mountain View section have been very much overlooked, while other, and perhaps less favored districts, have reaped the gain. At all events, I should say, visit this part of the country, examine the soil, see what thrifty

fruit trees are produced here, talk to such men as Capt. Wakelee and a dozen others I might name in his neighborhood, and see if your verdict is not the same as that to which I have come, that at existing prices of land compared with lands elsewhere with equal advantages, this is one of the best sections of California in which to seek a home.

A day or two later I visited the Palo Alto ranch, about one mile west of the S. P. R. R., and about an equal distance from Mayfield and Menlo Park. On my way to this famous stock-ranch I halted at the site of the great Stanford university and took a hasty survey of operations. Upward of 100 men are constantly employed on the grounds, and the masonry is well under way. Hundreds of people are attracted to this place almost daily, and particularly on Sundays, to witness the busy scene.

But the affairs of Palo Alto interested me the most, and, believing that many of your readers would likewise be interested in some statistics relating to one of the finest stock-farms in America, I will close my letter with a few facts concerning it.

Within this vast domain is included more than 10,000 acres of fertile land, upon which was produced last year 5000 tons of hay, 20,000 sacks of barley, 28,000 bales of straw, besides corn, carrots and other products in large quantities.

At the trotting stables there are stalls for 550 horses. This includes the barns for stallions in service, large, commodious, and convenient barns for horses being broken and in training, and stalls for brood mares. About half a mile beyond the stables a white fence incloses a double line of paddocks on either side of the avenue. To the left of one row of paddocks is another fine avenue, a quarter of a mile in length, which is kept in condition for speeding, and is used when the tracks are out of condition. Still to the left of this road is another double row of paddocks, adjoining which are rows of large, comfortable boxes for brood mares.

At the termination of the avenue first mentioned there is a large space in which are four large handsome stables, each of which contains 40 or more stalls. Directly opposite these stables, about 100 yards away, are rows of box-stalls to the number of 150 or more, in which are stabled yearlings and weanlings. Near these stables is a large mill for grinding and steaming feed; then come the stables for work horses, then the offices, and near them are two excellent training racks.

Governor Stanford employs on this ranch over 200 men, and the pay-roll averages \$7500 per month.

Palo Alto is the home of one of the most noted horses in the West—Electioneer, purchased by Senator Stanford 10 years ago of Mr. Chap. Bachman, Stony Ford, N. Y. He is now 20 years old, and his descendants number a large per cent of the 500 head that grace the landscape of the Palo Alto.

No admirer of really fine horses and an ideal paradise for rearing the same could fail of being delighted with a visit to this magnificent stock-farm.

F. B. L.

Birds and Boys and Bugs.

EDITORS PRESS:—I don't know if this Court can entertain your proposed amendment to the complaint against the "sapsucker." The Court will take the matter into consideration and render a decision at a future date; but at present the Court is scratching the summit of its oabze over the classic expression "hausetellat orifice." Happening this morning to be feeding the pigs, as I leaned against the hog-lot fence I repeated those words aloud, whereupon the pigs immediately wooo-wooh-woohed as they ran across the lot to wheel about in battle array against the opposite fence. The use of that beautiful expression in your critical note of March 24th (see RURAL PRESS, page 251) has brought to my mind the real meaning of the word "exhausted." It seems to be from the Latin, and means *sucked out*. Therefore, it is not exactly a nice word for a tea-party of the Ladies' Aid Society. In my early youth I often heard of being "sucked in," as, for instance, when one boy deceived another, the deceiver joyously derided the deceived as being "sucked in, y-a-a-a-h!"

Now, as the peculiar manners and tricks of all boys are odorous of a remote antiquity in some cryptogrammatic manner (whoop, that's a big healthy word) handed down from father to son, or, at least, from son to son, I would like to ask of the followers of Champlillon, Enin Bey, and others, if there is anything about a boy being sucked in by another boy upon the monuments of most ancient Egypt.

Speaking of boys brings me back to the *Picus*. Perhaps several old subscribers to your paper will remember that when they were boys in the middle western wooded States, in their voluntary studies of natural history, the woodpecker, the ground squirrel and the whoodle-bug were interesting objects to study. The *picus* of that country is mostly the large red-headed woodpecker, and he or the squirrel I need not describe; but the whoodle-bug perhaps needs some literary attention. It probably belongs to that family of insects called the ant lions. I don't know if it is a fly or a beetle, or a bug, among scientists. But among boys it is a bug—at least among American boys—about a half-inch long, with a long nose and with a steel spring in its back, and it gets under the dry side of a log or a ledge of rock

cropping, or anywhere that there is dry dust and ants, and there it makes a funnel-shaped pit-fall about the bigness of an acorn. It secretes itself in the dust in the bottom of this pit-fall, leaving in sight only the tip end of its nose. The ant, which is a great insect for business (Mark Twain says so), comes to the rim of this funnel-shaped pit-fall and takes a view, concludes he'll go down and get that bug at the bottom. That ant is doomed. The whoodle-bug grips that ant, sucks his blood (or whatever his formic acid is), and then by means of his steel-spring spinal power, gives a snap that sends the carcass of the dead ant out of and far beyond the pit-fall. Then the whoodle-bug cleans up and prepares for another ant. Such are about the practical points in its history, but the small boy has another use for this bug, a use which, I doubt not, is in some unremembered and unrecorded way connected with the Egyptian holy bug (or scarabæus) of the pyramidal era. When the American small boy finds the pit-fall funnel aforesaid he gets down on his hands and knees with his face directly over the pit-fall and begins a murmuring incantation, the translation of which is:

"Whoodle-bug!
Whoodle-bug!
Whoodle-bug!
Come up, come up;
Whoodle-bug,
Come up."

And the bug reveals himself in response to the murmur of the incantation. And, by the way, I seem to notice that nearly all brainy small boys have a love for incantation, mummy and rude efforts at legerdemain. Is this the inherited prehistoric savage haunting the horizon of civilization? And now, do you think that, supposing some cataclysm that would totally cut off a colony of uneducated persons of a civilized race from all historic advantages, do you think that the old savagery of the race would instinctively assert itself?

And speaking of instinct brings me back the clairvoyancy, as you call it, of one class of *picus*. How a woodpecker, the true *picus*, knows there is a grub—nay, more than that; how he knows there is going to be a grub in an acorn next springtime is a wonderful question, to which, so far as I know, there is yet no answer. I have seen, what no doubt others have seen, a flock or company of woodpeckers in the redwood forest, or rather on the edge of the forest, where the redwoods meet the oaks, pick little holes in the coarse outer bark of a redwood tree from bottom to top, all around, up to the height of 150 feet, and put an acorn in each hole. But now, as acorns are not of exactly even size, the *picus* must have some mechanical clockworks in his head which enable him to know how to cut holes of various sizes. And it is singular that a *picus* always finds, at the first grab, the acorn which will fit the hole he intends it for. He never misses. While the bluejay—a different bird, of another class—in attempting to imitate the woodpecker and steal the use of the latter's industry, will grab an acorn, fly to a hole cut by the *picus* to find that it will not fit the hole, and drop it, with a squall or squawk, and go for another acorn, and so seeming to be fooling away his bluejay energy, just for fun. But it is to be closely observed that in each acorn stored away by the *picus* there is the egg of a grub; but if a jay succeeds in storing acorns they may or may not have grubs in them—most likely not. And whether the jay ever comes back after his stores I have not yet found out for certain. I rather think not, however, because a bluejay had rather steal than enjoy the rewards of honest labor.

THE FIELD.

Prison Bags.

We alluded last week to the alleged combination in the grain-bag market and to the importance of the bugs from San Quentin as a factor in the situation. The report of Warden McComb, submitted at the meeting of the Directors on March 24th, and the action thereon, are given herewith:

To the Honorable State Board of Prison Directors—GENTLEMEN: I have the honor to report that the preparations for working the jute-mill at night having been completed on the 11th of this month, a second shift of operatives was organized, and on the night of the 12th the mill was worked till 10 o'clock and the prisoners were returned to their cells without confusion, disorder or inconvenience of any kind. The experience of the succeeding nights was similar to that of the first night, and now the night work is no longer an experiment, but an assured success.

As has been reported to you from time to time, abundant precautions have been taken to guard against attempt to escape, or to create confusion. The cell buildings are now inclosed within a high fence of scantlings, which continues as a narrow chute along the south wall of the prison until it ends against the west wall, which is also the east wall of the jute-mill building. Through these heavy walls a sap lyport is cut, and the chute thus conducts the prisoners from the cellhouses to the jute-mill without releasing them from the confinement of the prison-wall. As the jute-mill is also surrounded by a wall, nothing remains to be done while the prisoners are at work but to carefully patrol the walls and keep the men inside. To aid the guards in this duty, and to show the prisoners the futility of any attempt to escape, powerful electric lights are placed

at each corner of the smaller yard and others at different places about the grounds. The hand railing which has been put along the top of the wall enables the guards to move securely and with facility from one point to another in case their services should be needed, and lookout houses on the walls are occupied by the reserve force of guards who are off duty, but can be aroused by electric bells and brought on the walls in less than a minute. The second shift of prisoners is as safely guarded and with as little danger as the day shift.

The mill itself is lighted by gas, the flames being secured within a lantern. These lights are placed so as to enable the operatives to work the looms and spinning machines to the best advantage, and except for the inexperience of the new hands the work is accomplished as readily at night as in the daytime. The San Rafael Gas Company has taken great pains to give sufficient pressure by means of an exhaust pump and an automatic regulator.

The prisoners have been deprived of the direct issues of groceries from the Commissary Department, which were made a means for trafficking and bartering, and are now furnished with an improved ration as soon as the report on their diligence and skill shall entitle them to it. The new plan works very satisfactorily, as is shown in the increase of the daily output of the jute-mill and to all other branches of labor. The average number of bags produced by the day shift is far above that of the best single day's work last season. As soon as the night shift can be filled to the proper limit the output will be double.

Before commencing to run the mill exclusively on grain bags there were several orders on hand that occupied the looms for some time, but those orders have been completed and the mill is now running entirely on the manufacture of grain bags. Thus far 350,000 have been completed, with the prospect of adding about 14,000 each day, when the full complement of men can be put at work. It is a simple matter of calculation to ascertain how many bags can be produced during the year. If the farmers wish to buy for use as late in the season as September, there will be two million bags available for this year's harvest.

The newspapers of the State have widely spread the announcement that farmers could procure their bags direct from the prison, and numerous inquiries have been received. Quite a number of orders has already been filled, and others are constantly arriving. Judging from present appearances, we shall have no difficulty in disposing of all the bags that can be manufactured here in that way.

Letters of inquiry have also been received from dealers in grain bags, and my replies were framed so as to insure the carrying out of your plan, while not denying the inquirers the privilege of purchasing if the conditions could be accepted. In order that my action may not be misunderstood, I quote the reply to one firm of dealers who wished to secure a very large number of bags.

[The letter to which Gen. McComb refers is dated March 15th and was printed in full in last week's RURAL. It refused to furnish bags to the dealer, but offered to ship them to consumers and send the bills to the dealer, but not to amount in the aggregate to more than 200,000 bags. This offer was not accepted. Gen. McComb concludes his report as given below.—EDS. PRESS.]

There is a large supply of jute on the way from Calcutta, which will probably arrive about May 15th. The total value of this supply is about \$83,000, to meet which we will have the amount of the revolving fund, \$40,000, and the products of sales, which will easily reach the required \$48,000. This supply will keep the mill running till next season, and will enable us to enter the market with a large stock of bags to meet the demands of purchasers.

As this report is already lengthy, I will not add anything about the improvements which are under way, trusting that they will commend themselves to your notice.

I have mentioned the lack of available operatives for the double shift in the jute-mill, and now add that other work has been stopped in order to use the men for the jute-mill, and still the force is deficient. I therefore respectfully request your honorable Board to transfer 150 prisoners from Folsom institution at once, so that their labor can be made use of for this season's needs.

Very respectfully,
JOHN MCCOMB, Warden.

After the reading of the report, Director Sonntag submitted a resolution fixing the maximum price of bags at eight cents each. Director Luttrell submitted the following as a substitute, which was unanimously adopted:

WHEREAS, The plan of selling grain bags to the farmers direct having met with gratifying success, as is shown by the large number of orders booked at the prison; and whereas it is proper that the enterprising farmer should not be restricted when he avails himself of the opportunity of dealing directly with the Warden of the prison to procure the number of bags necessary to sack his crop; and whereas the farmers have been notified through the newspapers and by circular of the price of bags from day to day; and whereas an order for 500 bags has received as much consideration and as prompt attention as an order for 50,000 bags; thus encouraging both the small and large purchaser; and whereas we believe that no other plan could be devised to govern the dealings of this institution with the farmers which could give such general satisfaction; therefore, be it

Resolved, That the Warden be directed to continue the plan which has been inaugurated of giving the lowest price of bags each day to all inquirers, the offer to remain open until return of the mail from the point of inquiry; and when the order to purchase is received, either from the party himself or through his Grange association, or through his banker or local merchant, accompanied by check, it shall be filled in regular sequence for any number of bags that the mill may be able to supply, or which the Warden may consider prudent to sell.

Resolved, further, That until the further order of the Board the price of bags shall not exceed eight cents a bag.

On motion of Director Sonntag it was decided to transfer 150 able-bodied prisoners from Folsom to San Quentin for service in the jute-mill at the latter institution.

THE DAIRY.

Dairying in California.

The forthcoming *Overland Monthly* for April will contain an article by R. G. Sneath, the well known proprietor of the Jersey Farm Dairy at San Bruno, on "Dairying in California," from which we take the following:

Dairy farming is one of the most important industries in the civilized countries of the world, and the health, wealth, and prosperity of a country is largely denoted by the extent and condition of its activity.

Before the advent of Americans in California, the country was almost exclusively pastoral—overrun in fact with vast herds of wild cattle, valued principally for their hides and tallow. The climate, soil, and natural grasses of the country in favorable seasons produced such a prolific growth of animal life that a suppression, through occasional droughts and lack of feed, seemed not an unmixed evil.

Through isolation and the survival of the fittest, these cattle became in time a specific breed, truly Californian and unlike those of any other country, although in general appearance somewhat related to the native Texan and Mexican cattle. On the settlement of the country by Americans, who brought with them many domestic cattle from the Eastern States, the crossing with the native cattle commenced, and this course was pursued until the natives and their crosses have entirely disappeared, and in their places, although less in number, may be found improved breeds of cattle from almost every portion of the world, until it may be fairly claimed that but few countries can exhibit a larger percentage of superior cattle.

A thorough examination of the reports of consuls upon "cattle and dairy farming" in other countries, as compiled by the Secretary of State for 1887, with illustrations, shows very clearly that very few countries produce cattle that are superior in any respect to those now being raised in California, notwithstanding her youthful existence.

It is perhaps not remarkable that a mild climate, an abundance of food, with pure air and water, should produce such apparently wonderful results, without the skillful and devoted attention necessary in more unfavorable climates. The result, when in addition to the natural advantages those helpful measures in vogue in older communities are employed, cannot be otherwise than favorable. And who knows but that in time, with more advantages, California may yet take the lead in the production of fine cattle?

Mountain Dairies.

While the whole of California, even in her mountain heights, is well adapted to pasturage, the coast counties are perhaps the most valuable for that purpose, because the moisture from the ocean gives a longer period of growth to the grasses. Most of the present dairies are located along and near the Pacific shore, although there are many small dairies in the interior valleys, supplemented by others in the mountain valleys for summer use, thereby rendering the business continuous.

After the spring grass in the lower valleys begins to dry up and turn yellow, in the middle of May or first of June, the drive to the mountains begins. One or two wagons are loaded down with dairy utensils, plain household furniture, groceries, and table supplies. Then the cattle are rounded up and started with the teams on the road to the mountains. It generally takes about a week, making from 10 to 20 miles daily, and camping where good feed and water may be had along the road. Women very seldom accompany these trains, as it is a very rough and unpleasant trip through heat, dust, and bad roads; but when the mountain meadows are reached, and comfortable quarters have been provided, with a good range for the cattle, the business becomes very enjoyable. It is profitable as well, and continues until October, when the frosts of winter signal their return.

Cattle raised in the mountains are more healthful and vigorous than those from the valleys below. The mountain grasses are much more nutritious than lowland, though more scanty, and these with the mountain air and pure cold water have a wonderfully beneficial effect upon animal life. The butter made in those districts is always in demand at the highest market prices.

Irrigation.

The irrigation of pasture land for dairy purposes has not received the attention it deserves; for there are thousands of farms within the State that could be made very profitable with a moderate degree of enterprise and expenditure, by the careful use of water upon good strong land. Alfalfa, rye grass, and orchard grass, and perhaps many other sorts, can be kept growing vigorously along the coast during the whole year, with a moderate application of water during the summer season; and this where without irrigation the business would be quite unprofitable. The same may be said of the warmer interior valleys, by exercising more care and using more water.

Success in dairying depends almost entirely on an abundance of good feed, good water, and the best of animals. With plenty of good nutritious feed and pure wholesome water, however, almost any healthy common-grade cows, with the poor milkers culled out, will be profit-

able; but to insure good profits the animals must be of the best, and reared to the business.

Dairy Cattle.

The best are not always thoroughbreds, for crosses of common stock with thoroughbreds frequently produce large and rich milkers. Thoroughbreds are likely to recede in value as milkers, because they are generally expensive, and the owner is slow to part with them because of any deficiency in milk, while he will not hesitate in sending grades to the block should they fail to give satisfaction. So a constant selection from the grades will in time furnish better milkers, on an average, than unselected thoroughbreds. In fact, success cannot be attained except by discarding at once every animal that fails in her performance at the pail, no matter whether of high or low degree.

Most of the thoroughbred cattle imported in early days were of the Shorthorn breed, only a portion of which were of a decided milk strain. Good beef, which the Spanish cattle, so called, did not furnish, was more important than butter and cheese. Besides, the country was full of cows that might be crossed with the larger Shorthorns, and thus an improved animal was had that not only furnished good beef, but to some extent could be used for dairy purposes. A few Ayrshires and Devons of good blood came too, and these also were an improvement. Then the noted Jerseys were received in large numbers as the favorite family and dairy cow. The climate of their native home being similar to that of California, it was believed that they would not only thrive, but perhaps excel their previous records by the change. This has happened in some cases, and if they had been treated as less valuable cows have been—that is, by discarding all the poor milkers and those in low vitality—those remaining would have been a great improvement over those of the original importation. The failure to do this has stocked the country with a large number of Jerseys of little practical value. The crossing of large first-class Jersey bulls with the common-grade cow has been attended with good results, the product being of good size and vitality, and the milk not only much richer, but of fair quantity. Where this process has been followed intelligently, and the small milkers discarded, dairies have been made profitable.

Later on, the Holstein-Friesian, Hereford, Polled Angus and Galloway were imported in considerable numbers, the three latter principally for beef purposes, and the Holsteins for both meat and milk. The latter, in fact, have been imported of late years in quite large numbers, and they are now, perhaps, more popular than any other breed for dairy purposes. They give a reasonably rich milk and a much larger average quantity, and are perhaps more gentle than others.

The Holsteins are hardy, and transmit their form, color and milking qualities in crossing with most other breeds so perfectly that their grades can hardly be distinguished from the real thoroughbreds. Their size is quite large, and they are always black and white in color. For beef purposes they compare quite favorably with other kinds.

Their cost is high at present, and will be, so long as it is necessary to import them, but they are increasing rapidly in numbers, and the time cannot be far distant when they will be within the means of farmers generally.

There can be no more beautiful sight than a large herd of Holsteins busily engaged in cropping the green herbage, as the contrast of the clear-cut black and white on a green landscape is so marked as to attract instant attention.

Leased Dairies.

Most of the butter and cheese dairies of California are now conducted by Swiss and Portuguese people. For many years they have been employed more than any other class as milkers, and from that position it was an easy step forward to renting and proprietorship. They are very industrious and economical, and, having had much experience in this industry in their native country, they naturally fell into the same business here.

Many of the larger ranch owners have found that they could lease their land and cows to these foreigners with more profit than to conduct the business themselves, and these ranches were divided into several farms with 100 to 200 cows on each, and leased, all told, at a fixed rate per cow, the number and value of stock to be kept good.

The improvements on these lots are generally a small, one-story living house, a milk and butter room, a small stable, and corral to milk in—at a total cost, perhaps, of \$500—while the general appearance is anything but cleanly or cheerful. Each man on the premises milks from 20 to 25 cows twice daily, and together they cultivate enough hay, and some roots perhaps, to keep their cattle in good condition through the year. One pair of work horses and a riding horse are generally all that is required in starting. The implements required are few and inexpensive, so that scarcely any capital is required by a renter.

Frequently two or three men join in a partnership, all being good workers, do most of the labor required themselves, and having a small expense account, make savings relatively much greater. One at a time may go out and start for himself, and thus each may in turn be provided for.

Sometimes several milkers employed in a large establishment co-operate by pooling their wages and intrusting one of their number with

the funds to operate in the dairy business for their general account.

But few of these dairymen have families or women about until they are fixed with homes of their own. They are almost invariably successful, however, in owning good farms within from 5 to 10 years after their arrival in the country, as the fruits of their industry, and they make fairly good citizens thereafter.

There are, however, many dairies conducted by Americans—dairies that compare in size and completeness with those of the Eastern States. On these dairies families are growing up surrounded with all the comforts and many of the luxuries of life, with still an increment of profit.

Such dairies are more scientifically handled and their produce has a higher value than the others. Labor is high, and therein the foreigner has the advantage, as he not only works hard himself, but employs his own countrymen, who on arrival in the country work at extremely low wages until fitted to go into other service.

Most of these arrivals are young men about of age, and physically able to do any labor. Their experience in the home country, however, except that of milking a cow, is of little value to them here, and not being able to speak English, they are perforce compelled frequently to work for their board and a very few dollars per month.

This is true not only of the Swiss but of all foreigners, and is the principal reason why foreigners that employ many laborers, especially in the dairy and vegetable line, have become wealthy in a few years. They have thus been able to crowd our own people to the wall in many industries where labor is the chief factor, and their presence in the country is looked upon by many unfavorably.

Most of the butter and cheese is made from February to July, or during the natural grass season, and by arranging to have the cows come in about the first of February they have a season of six months when but little feed is required beyond the pasturage obtained in the fields. At this season dairy produce is generally low in price, and most of the butter is packed in firkins, or made into rolls of about two pounds each, covered with light muslin wraps, and then pickled in salt brine in tight barrels for future use.

Cheese is also prepared to keep, and is frequently retained for a more favorable market. Many dairies are now in operation the whole year. To secure much milk, however, they must feed considerable hay and mill feed during the dry season. Nearly all the hay used is from land cultivated and seeded to wheat, oats or barley, which is cut and cured in the milk, and makes excellent fodder.

There are, however, in the mountains and valleys, many moist meadows that furnish an abundance of natural grasses, which make good hay and only require cutting and curing. In the mountain meadows timothy or red-top may not require seeding but once in many years. But those cultivated grasses will not survive the heat of the lower valleys. Hay-making is not a hazardous business in the matter of curing, as it seldom rains during the hay season, and it is quite frequently more profitable to turn the wheat-field into hay rather than have it ripen for the grain that is in it.

City Milk Supply.

Mr. Sneath passes next to the consideration of the milk supply of San Francisco and notes on feeding dairy cattle, subjects which we will take up at another time.

THE LUMBERMAN.

Increasing the Durability of Timber.

The following has just been issued as a bulletin of the Forestry Division of the U. S. Department of Agriculture:

Our people waste a large amount of timber and of labor, by lack of care for the timber after it is cut. Rotting of timbers and fence-posts necessitate not only the cutting of a larger quantity of wood but also the labor of replacing the same oftener, than if the wood could be made to last longer.

There are some rules in the handling of timber which are too often overlooked and which should be observed by everybody who uses wood in places where it cannot be kept dry or wholly submerged.

There is also much unintelligent use of paints and other coatings, applied in the hope of preserving timber, when it should have been well known, that by painting green or badly seasoned timber, decay is hastened rather than prevented.

While to many it may be impossible to apply the more complicated and expensive methods of wood preservation which recommend themselves to large consumers of wood material, knowledge of the following considerations, suggested by the Chief of the Forestry Division, will aid the small consumer to handle his material to better advantage, to utilize forest products more thoroughly and intelligently, and to make them last from two to three times as long as when not observed.

Decay of Wood.

Decay of wood is due to fermentation of the sap, induced probably by the growth of either bacteria or fungi. These organisms need for their development warmth and moisture, be-

sides the nitrogenous substances and salt tained in solution in the sap.

To prevent the growth of these ferments therefore, the sap in the wood must be dissolved (leached) or dried out, and moisture be prevented from entering again.

The Manner of Use Influences Durability of Timber.

Timber placed entirely under water or deep in soil (drain pipes) will practically not decay nor is it liable to rot, when kept absolutely dry, away from the influence of humid atmosphere.

Wood generally decays in proportion to the warmth of the temperature.

Hence on northern exposures, in cool valleys, on high elevations in northern countries, the duration of wood is longer than when placed under opposite influences.

If wood is used in contact with the ground, decay proceeds the more rapidly (beginning at the point of contact with the soil), the looser, moister, and warmer the soil, and especially the greater the liability of change from dry to wet; therefore timber will last longer in heavy, always moist clay, than in loose, alternately moist and dry sand or gravel, or in warm, comparatively dry lime soils.

Rooms without ventilation induce decay, producing the dry-rot (which first appears in white patches, changing into brown or gray). Ventilation, drying-out, and isolation from moisture will cure this defect.

Natural Factors Influencing Durability.

Sound mature trees yield more durable timber than either young or very old trees. Maturity is the time when trees have ceased to grow vigorously, which is indicated by a flattening of the crown, dying-out of branches in the crown, and by the change of color of the bark. Maturity may be reached, according to circumstances, by the same species, when the diameter is only a few inches or when it is as many feet. The small tree on the arid soil or overtopped by others from its birth may be as old and older than a tree of greater dimensions growing under more favorable conditions. Of two pieces of the same kind the heavier is the more durable, although absolute weight of two different kinds of timber does not determine their relative durability.

Heart-wood, as a rule, can resist deterioration longer than sap-wood, because it contains less sap; but when the sap-wood is well seasoned and heavier, this difference disappears.

The site has an influence on durability in so far as it influences the formation of heavy wood.

Quickly grown hard woods with wide annual rings, and slowly-grown conifers with narrow (yet not too narrow) rings and "tapped" pines (on the tapped side) yield, as a rule, the most durable wood, other conditions being equal.

Coniferous wood from comparatively poor soils, high altitude, and dense forest, hardwoods from rich deep warm soils and isolated position, are most durable.

The resinous substances in conifers form an element of protection against decay.

Time of Felling.

With proper after-treatment of the wood the time of felling seems not to affect its durability. Early winter felling (December) should have the preference, because less fermentable sap is then in the trees, and the timber will season with less care, more slowly and more evenly, and before the temperature is warm enough for fermentation to set in.

If the wood is cut "in the sap" it is more liable to fermentation and to the attacks of insects, and more care is necessary in seasoning, for the rapid seasoning due to the warm dry atmosphere produces an outer seasoned coat which envelopes an unseasoned interior liable to decay. When cut in the leaf it is advantageous to let the trees lie full length until the leaves are thoroughly withered (two or three weeks) before cutting to size. With conifers this is a good practice at any season, and, if it can be done, all winter-felled trees should be left lying to leaf out in spring, by which most of the sap is worked out and evaporated.

Coatings to Keep Out Moisture.

Never apply paint or any other coating to green or unseasoned timber. If the wood was not well dried or seasoned, the coat will only hasten decay.

Good coatings consist of oily or resinous substances which make a smooth coat, capable of being uniformly applied; they must cover every part, must not crack, and possess a certain amount of plasticity after drying.

Coal tar, with or without sand or plaster or pitch, especially if mixed with oil of turpentine and applied hot (thus penetrating more deeply), answers best. A mixture of three parts coal-tar and one part clean unsalted grease, to prevent the tar from drying until it has had time to fill the minute pores, is recommended. One barrel of coal-tar (\$3 to \$4 per barrel) will cover 300 posts. Wood-tar is not serviceable because it does not dry.

Oil prints are next in value. Boiled linseed oil or any other drying vegetable—not animal—oils, are used with lead or any other body (like pulverized charcoal) to give substance. Immersion in crude petroleum is also recommended.

Charring of those parts which come into contact with the ground can be considered only as an imperfect preservative, unless a considerable layer of charcoal is formed, and if it is not carefully done, the effect is often detrimental, as the process both weakens the timber and produces cracks, thus exposing the interior to ferments.

NORMAN J. COLMAN,

Commissioner of Agriculture.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

San Jose Grange.

Discussion on Prison Discipline and Prison Reform.

The question of "Prison Discipline and Prison Reform" was discussed at the open session of San Jose Grange on the 23d inst. The *Mercury* reports a good attendance, with Worthy Master Hiram Pomeroy in the chair.

The discussion was opened by Bro. Edward Webb, who spoke at length on the management of prisons in the 18th century, comparing it with the condition of affairs at the present day. He gave interesting data of the condition of the California prisons, with some comments on the Santa Clara county jail. In the latter place he said that one-half of the prisoners were tramps, drunks, vagrants, etc., who were confined but a few days. A portion of the prisoners were put to work in a quarry, being paid 50 cents per day for four days previous to their discharge. He remarked that during the four years from 1880 to 1884, two-thirds of those committed to San Quentin were either Chinese or men who spoke the Spanish language.

Bro. O. F. Alley thought that strenuous efforts should be made in the reformation of criminals, as well as in preventing the increase of the criminal element by reformatory schools. He read extracts showing how this theory had been developed in England, where institutions had been founded for the purpose of taking up children who were becoming criminals, and educating them. These schools had been successful, and by means of them hundreds of young boys who would have grown up the worst of lawbreakers were regained to society and became useful persons. Bro. Alley's remarks were, in the main, devoted to reform, but he also thought that the system of rewarding convicts for faithful service and labor by shortening their terms of sentence was a good one.

Bro. A. R. Woodhams thought that prisoners should receive compensation for their work, which should go to their families, or be saved for them after they are released from prison. Frequently a wife and children are left destitute and with no means for the support of life, while the criminal is taken off to jail. Could the time which he spends in the penitentiary, above his expense to the Government, be made to give some return to his family, there would at least be some good done.

Bro. Gillman of Minneapolis stated that there were associations there which made a specialty of looking after the interests of criminals and people who could not find work.

Bro. Coates cited the methods of European punishment, and thought that they were too severe and the laws cruel. The convicts were treated in a manner beyond the needs of justice and not in proportion to the nature of the crime. In Russia they were banished to a cold, inhospitable country, separated from friends, with no means of communication or assistance.

Sister M. A. Sheldon of Haywards thought that Siberia was not in all instances so bad as it was painted. The convict, to be sure, was banished to a far-away country, but, by proper behavior, he was there allowed to secure a hut of his own and to have some of his time at his own disposal. As an instance of progress toward the regaining of the convicts in society in this country, she cited the case of a San Francisco manufacturer who would take the criminals as they were discharged from San Quentin and give them decent work until they could secure employment.

Sister L. J. Watkins thought that the prisoners should not only be kept at hard work, but should be paid for their work its value exceeding the cost for their expense. This sum should either be applied to their own family or to that of the persons wronged, so that some reparation might be made to the victims of the malefactor.

Sister A. R. Woodhams made a few remarks in the general direction of reform.

Bro. Sanders, as well as most of those present, thought the laws in this direction should be modified so as to keep the prisoners constantly at work and have a tendency toward reformation.

ANTELOPE GRANGE.—Bro. P. Peterson, Secretary of Antelope Grange, writes that his Grange met on the 24th inst. and elected officers for the year. He adds: Our Grange has, and I think wisely, put all our youngest members in the lead this time. This is

a new departure, but unless I am much mistaken, you will find our Worthy Master, when you meet him in the next State Grange, both worthy and well qualified. Bro. Peterson reports a promising outlook for crops in Colusa county, and says there have been an unusual number of fruit trees set out this season.

From Danville Grange.

Poem Read Before the Grange at its Last Meeting.

EDITORS PRESS:—In the fall of the year 1886 a fire occurred upon the farm of Bro. Charles Wood, of Danville, Contra Costa county, Cal. It was a serious, not to say a disastrous one, burning as it did the whole of the ripening grain, and it was only with difficulty that the family residence was saved.

Bro. Wood was so touched by the way his friends (Patrons of Husbandry) manifested their sympathy under the trying circumstances, that he concluded to tender to those friends a friendly "picnic," to be held in front of the family residence at "Woodside." This affair was of such a pleasant nature that even at this late day it is fresh in the memories of us all. And as Bro. Wood intends making the "picnic" a yearly event, I have penned the accompanying lines entitled "Danville, September 23d," and don't think the date of the heading will ever be forgotten. The localisms mentioned in the text are familiar to us all. Yours fraternally,

WILLIAM ED. COOK.

Alamo, Contra Costa county, Cal., March 18, 1888.

Danville, September 23d.

Within the shadow of a mountain famed
For scenes of grandeur, and being after Satas named,

In secluded comfort and in peaceful calm,
Stands what is known as "Woodside" farm.
Beneath the shade of locusts in their pride,
The farm-house stands; the family reside,
Whose sunny natures, if nothing else, alone
Would serve to make them ever widely known.

Near by the running stream whose ram hydraulic
Forces water past the fishes in their frolic,
Who sometimes floated in the sunshine, sly,
Then upward sprang to catch the gamboling fly.

Hard by the lizard and the busy bee
In restless movements keep sweet harmony:
Now on this flower, now skimming o'er that plant,

They come in contact with the industrious ant,
Who jolts and jostles in his pathway small
The lazy ants who never work at all.
Though small his kingdom is, 'tis large enough for he

Who counts, among that kingdom, husbandry.
Here all is order, thrift and business tact—
Things which are done are done to be exact;
Or done as near perfection as can be,

Which, when done at all, it is a treat to see.
Here we may witness, rapid as a dream,
Butter made to order by the power of steam.
And we need not use a very powerful lens
To see young chickens hatched without the aid of hens.

There came a day of danger to this peaceful farm;
Fire, in all its horrors, was the dread alarm.
Oh! what a terror when we cry "Fire" in vain!
Oh! what disaster when it burns the golden grain!

The fire-king came, in awful splendor clad,
Bent on destruction, like a demon, mad.
No human power could stop his wild career
Till his tongue of venom had licked up each golden ear.

Then came that magic touch, the Patrons' spell,
Whose bond of friendship makes every bosom swell.

To make amends for this great loss by flame,
Like brothers all they to the rescue came.
How great this day each little thing appeared;
Each little token, how great it was revered;

For when the hearts of men to noble actions rise,
The smallest atom to a monster magnifies.

Mine host of "Woodside" said he would remember,
And fixed a day, the third week in September,

To meet his brother Patrons, one and all,
Who on that day made him a welcome call.
The royal welcome which he gave to each
Was quite as endless as the Imperial peach.

As Imperial peaches are sometimes very rare,
They, like royal welcomes, are not found everywhere.
The tables spread, replete with bounteous fare,
From luscious grape to sugary melting pear,
To tasty hams and broilers on a dish,
Was all the keenest appetite could safely wish.

The mazy waltz, the polka and quadrilles
Raised pleasure high as the surrounding hills.
Some played at quoits, while here and there
Sat a happy Patron in an easy-chair.

Then came a speech of heartfelt thanks sincere,
Whose warmth to many a cheek brought many a tear;
Whose simple pathos told its tale of truth,
And fired the hearts of old age and of youth.

The feasting over and the dancing done,
We turn our faces to the setting sun,
Hoping ever that the fire alarm
May never more be heard on Woodside farm.

Point of Timber Grange.

W. M. Overhiser personally writes: I was called to Point of Timber Grange on the 3d inst. to help them out of some trouble they were in. I left home at 5 o'clock in the morning and was met at Brentwood by the Worthy Master and taken to his house for breakfast. We talked over their troubles during the forenoon and at 2 P. M. repaired to the hall, not expecting to have a meeting, as the weather was very unfavorable. But we succeeded in getting a quorum and opened the Grange. After talking over matters, I advised them to call a special meeting on the 10th, at 10 o'clock, and notify all the members to be on hand promptly with their lunch-baskets. I promised to be there and spend the day with them and try and get them out of their dilemma. I left home again yesterday morning, and was on hand in time. The Grange was opened about half-past ten, and all seemed to be eager for the fray. We commenced by reading the minutes of the two previous meetings and adopting them with some corrections. We worked along until lunch-time without seeming to get at the real question, but after all had satisfied the inner man and began to feel good-natured, we called to order and went to work. I was called on to rule on several questions. But before the Grange closed we succeeded in settling all differences of opinion, and all seemed to be satisfied and well pleased with the result of the meeting. Yours fraternally, W. L. OVERHISER.

Next Week's Meetings.

All Lecturers and Deputies are requested to meet at the office of the Secretary of the State Grange, 220 Market street, San Francisco, at 10 A. M. Friday, April 6th, together with all officers and Past Masters of the State Grange, and also all other members—brothers and sisters—who feel an interest in the object of the meeting.

This meeting is for a conference concerning matters relating to the Good of the Order, and to devise plans for the future work and progress of the Grange.

The regular meeting of the Executive Committee of the California State Grange is hereby called to meet at the office of the Secretary, 220 Market street, San Francisco, at one P. M. on Friday, the 6th day of April, for the transaction of such business as may be brought before it relating to the interests of the Order.

Special meetings will also be held on the 4th and 5th, commencing at one P. M. on Wednesday the 4th.

Grange Elections.

NEW CASTLE.—S. A. Woods, M.; J. A. Robertson, O.; A. P. Hall, L.; Geo. P. Perkins, S.; F. B. Fitch, A. S.; Mrs. H. A. Blanchard, C.; Wm. Barter, T.; R. M. Nixon, Sec.; H. E. Parker, G. K.; Mrs. A. L. Robertson, P.; Miss Jennie Page, F.; Mrs. S. E. Woods, Ceres; Belle C. Boggs, L. A. S.; Wm. Barter, Trustee.

ANTELOPE.—John D. S. Taylor, M.; W. F. Sites, O.; Geo. F. Myrick, L.; H. A. Logan, S.; Geo. M. Sutton, A. S.; Sister S. A. Logan, C.; John Sites, T.; P. Peterson, Sec.; H. C. Stanton, G. K.; Sister S. M. Sites, P.; Sister M. Sites, F.; Sister T. J. Rosenberg, Ceres; Sister S. C. Clark, L. A. S.; W. F. Sites, Trustee.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Grange and the Order.

Commemoration of Judge Joel Russell.

The committee appointed by Temescal Grange for expressing their feelings of respect to our deceased brother Judge Joel Russell, and sympathy with his wife and sons, report the following for publication:

Officers and Members of Temescal Grange: Your committee appointed to express sympathy to the family of Bro. Joel Russell and members of Eden Grange, submit the following:

A warrior fallen. We realize in the death of Brother Joel Russell of Eden Grange that Temescal Grange has lost almost an individual member, so closely allied have been the interests of each since their organization. Those present at our last joint meeting at Oakland, on the anniversary of the birth of the P. of H., well remember his genial, kindly face, ringing words of wisdom for the cause of justice and right, which he so ably defended on every occasion, never losing an opportunity that presented itself to fearlessly express his honest convictions. Individually, and as a Grange, we extend to Sister Russell and family, and Eden Grange, our warmest sympathy. We have lost a true friend and brother, one who was ever ready with hearty grasp of hand, cheering words, and kindling eye to greet us. We shall miss him much!

May the Divine Master gently lead the sorrowing family fearlessly in the path of duty he

trod, may the sons eminently follow his noble example in the cause of temperance and justice, and all reach the same successful peaceful end as well prepared to receive the welcome plaudit "Well done, good and faithful servant," as was he.

S. H. DEWEY,
N. G. BABCOCK,
S. GOODENOUGH,
Committee.

Postal-Telegraph Legislation.

The S. F. *Call* of Sunday last remarks: The condition of the Postal Telegraph bills in Congress is not generally known. It is known that there is a bill pending in each house, and that their main features correspond. Reagan of Texas, the new member of the Senate Committee on Postoffices, is pushing a bill of his own with the perseverance which he showed in the House in pushing his Interstate Commerce bill. As there appears to be a pretty substantial agreement among all political parties in favor of some scheme of postal telegraphy, it is quite on the cards that his bill or some similar one may become a law at this session.

This coast is interested in a bill introduced by Anderson of Kansas relative to telegraphs on this shore. This bill provides that all railroad companies which received subsidies or land grants from the United States shall operate the telegraphs along their lines themselves, through their own officers and employees, instead of leasing them to other companies. They shall be bound to connect and exchange business on equal terms with any other telegraph companies which may extend their lines so as to intersect the lines of the subsidized companies. They shall report to the Interstate Commerce Commission all contracts and agreements of whatever description with other companies in reference to the ownership, control, maintenance or operation of telegraph lines upon their property or right of way. Neglect of these mandatory provisions is to be punished by fine and imprisonment of the officers of the negligent company, and the company itself shall be liable for all actual damage sustained. The object of the bill is to facilitate the extension of the telegraph system on this coast, and to place it out of the power of any existing company to check such extension by refusing to exchange business with new companies, or to allow them to put up poles on its land.

It seems obvious that it is a mere question of time when the bulk of the telegraph business must in some way or other pass into the hands of Government. But there is no good reason why it should become a Government monopoly.

* * * If the Postal Telegraph were in operation to-morrow, there is no reason for believing that the existing telegraph companies would be driven out of business. At such reduced rates as enlightened views of the interest would require, there would probably be business enough for all the existing lines, and the Postal Telegraph too. But the success and extension of new lines depend upon their power to compel existing lines to connect and exchange business with them. A refusal by existing lines to do so is simply an attempt to limit the diffusion of intelligence and to impose restraints on the development of commerce and industry. It does not comport with the public interest that such a refusal should be possible, and hence the Anderson bill which, it is said, is likely to become a law.

JUDGE A. E. HOWARD, father of Mrs. J. V. Webster, died at his home in East Oakland on the 21st inst., after a lingering illness of dropsy and heart trouble. He was a well-known and respected citizen and a prominent Odd Fellow. All Patrons will sympathize with Bro. and Sister Webster in their sore affliction. We believe the bereaved widow will take up her residence with Bro. Webster's family at Creston.

WALNUT CREEK GRANGE, we are informed by Bro. A. C. Loucks, conferred the third degree on three candidates last Saturday. Another has been elected and two more applied. The next meeting occurs on Saturday, April 7th. We are glad to hear good news from this old parent Grange, which is located in one of the most promising farming districts of the State.

WORTHY MASTER OVERHISER wishes us to state that all members of the Order—both brothers and sisters—are cordially invited to be present at the meeting of deputies April 6th. See the official notice in another column, which has been changed this week, and made to read as all would like to have it.

ELECTION OF SENATORS BY THE PEOPLE. The House Committee on Revision of the Laws on Thursday, March 22d, decided almost unanimously to report the joint resolution proposing an amendment to the Constitution for the election of United States Senators by the direct votes of the people.

BUTTE MOUNTAIN POMONA GRANGE has arranged to meet five times each year, on the fifth Saturday in March, June, September and December, and on the fourth Saturday in May.

BRO. D. A. OSTROM has been appointed Deputy Lecturer for Yuba county.

Oregon State Grange Lecturer at Turner Grange.

At an early hour on March 10th the members of Turner Grange began to arrive, and at 10 A. M. the Grange opened in fourth degree, W. M., J. Porter in the chair. A resolution against adulteration of food was adopted, which brought out considerable discussion. The passage of the Oleomargarine bill has doubled the price of dairy products. The Grange is interested in the protection of farm products and pure foods generally; and the subject of adulteration of edibles is being discussed throughout the Grange of America. A public opinion or sentiment is being formed in the minds of the people against frauds, and this same conservative element will yet, by its very aggregate strength, compel Congress to protect the people. It is the opinion of some speakers that many of the new diseases that baffle the efforts of physicians are caused by the adulterations used in the preparation and manufacture of foods.

There are 21 agricultural manufacturing establishments, 19 of which have formed a "trust." That means death to the interests of the farmer. Only by combined effort can he overcome this gigantic fraud, this "sea-devil."

After lunch, Lecturer Hayes took the stand and spoke for some time in the interest of the Grange. It behooves us to look out for our interest. Seemingly a few can do but little in the formulation of public sentiment, and oftentimes they become almost discouraged; yet, when we look abroad and compare the works of others, it is seen that the few have always wielded the great and lasting influence. The few are they who educate and form public sentiment and push to the front the whole. The power of the Grange is in molding public sentiment, for law, however good, cannot be enforced unless it meets the approbation of the masses. If it had not been for the organization of the Grange the Interstate Commerce bill would not be in existence to-day.

We stand as the conservative element of the country. The salvation of our country rests in the hands of those who carry the dinner basket. Of laborers and producers there are over 14,000,000, yet in the halls of Congress few if any among these are there to represent the interests of the laboring man. This vast array of force are lawyers, preying upon the credulity of the people and gathering in the shekels from the rings and corporations. That such is the case is an infamous shame. And so it will continue to be until the laboring and producing classes can use intelligently and independently the power that is theirs—the ballot.

Put Darden asks what is the matter that farming does not produce millionaires. [Here the Lecturer quoted largely from the address of the W. M. of the N. G.] The question has been asked: "Are farmers generally happy?" Yes, though not generally wealthy. The comparison of wealth of other lines of trade, profession and corporation causes restlessness. They reason among themselves and are seeking out the cause why a well-tilled farm can pay but three per cent. To the question what stock pays, the good man answered "watered stock."

Manufacturers of agricultural implements form "trusts" by reason of the war tariff put on as revenue. Put your revenue on the idle income, not on the production of your country.

Farmers must have a voice in the controlling of the currency of the country or assume the position of serfs. That the Grange has influence is manifest by the tons of memorials sent to farmers for their opinions, approval, etc., notwithstanding Pearson and a nameless Oregon defamer.

In the *Oregonian* of a late date there was an article entitled "The Rise and Fall" (or some kindred title) "of the Grange in Oregon." Some truths were told and some—mildly putting it—misrepresentations. At first, I thought to answer this fallen Granger, whom our people long ago saw fit to distrust and discard; then upon second thought I looked upon it as so much free advertisement. You have all heard of the great P. T. Barnum and his woolly horse; how the papers and people, right and left, abused the great showman for imposing his stupendous humbug on the people. Some friend told Mr. Barnum how the world's tongue was defaming his good name, and trying to make his show out a monster humbug, etc. The wise old showman patted his friend on the shoulder and said: "Never mind; it is just so much free advertisement. People will come and see the woolly horse and judge for themselves as to the humbug." And notwithstanding the assertion that "the Grange has never entered into

legislation" or "wielded political influence," and that "women run it," etc., etc., there is a great pulsating, reading, thinking and intelligent world, who know the works of the Grange and weigh aright the worth of the yeomanry of America.

Socially, the Grange pays for all it costs us in time and dues. If you would know its real value, compare the people, old and young, who attend the Grange with those in communities where the Grange does not exist. This constant meeting together is giving esse and grace of manner, polish, fluency and form to thought, and assurance and aggressive perseverance. The farmer must learn to think in more than one channel. He must not stop the flow of ideas, and see things solely from his partisan newspaper, but get at the truth of things in general from papers devoted to the cause of the Grange and agriculture. In these papers the people furnish the sentiment, unbiased, untrammelled, and not poisoned or perverted by the reviewer or editor.

The Grangers' Bank.

The Grangers' bank of San Francisco is about to secure an important extension and improvement of its facilities for doing business. So much has the business grown by the multiplication of both city and country patrons, that the counter, desk and vault space has been found far too small even when every available inch has been pressed into constant service. For this reason the directors have approved the plans drawn by Albert Montpelier, the well-known cashier and manager, and will immediately begin the actual work of enlargement. The adjoining store has been secured and the dividing wall will be removed. Taking in the new apartment will just about double the floor space of the bank. A new vault, larger than the old one, and similar to it in finish, will be erected. The counter will be lengthened and divisions made for each line of work. The furniture will be made from original designs by Mr. Montpelier and will be unique and beautiful. Desks will be increased in number and furnished with inclosing screens of frosted glass, so that the book-keepers may be free from distraction. A new room for the manager will be provided, and a room for the storage of grain samples and other property which accumulates so fast in a thriving business institution. A new doorway will give entrance to the bank from California street. All these and other improvements, which we hope to note at greater length when the work is complete, will give the bank new room for new growth, which is certainly promised by its past progress.

The Grangers' bank will complete its 14th year of existence next month. The last statement of the directors shows that the bank has a paid-up capital of \$600,000, with a surplus of \$40,000. It has paid dividends every year since its organization, and the dividends amount in the aggregate to over half a million dollars, equal to \$50 for each share of stock issued. By its policy it has been of great aid to the farmers of the State in spreading abroad a better idea of agricultural credit, in facilitating the work of the grain grower by loans on locally stored grain at much lower rates than formerly were exacted, and in many ways has aided California farmers to a better position in financial circles. It has been a practical embodiment of Grange principles and is a credit to all who have maintained it.

YUBA CITY GRANGE talks of building a hall this summer. A committee has the matter in charge. Several offers of lots, etc., have been tendered them. The *Farmer* says P. L. Bunce offers an acre of land and \$500 in cash if they will go to his place.

GRAIN ON CREDIT.—Suppose a farmer raises 1000 bushels of wheat, and one of his neighbors should come and buy a bushel, and the price being a small matter, should say: "I will hand you the amount in a few days." As the farmer does not want to be small about so small a matter, he says, "All right," and the man leaves with the bushel of wheat. Another comes in the same way, and still another, until the whole thousand bushels of wheat are trusted to 1000 different persons, and not one of the purchasers concerns himself about it, for it is a very small amount he owes the farmer and, of course, it doesn't help him any. He doesn't realize that he frittered away his large crop of wheat, and its value is due him in a thousand little tributes, and that he is seriously embarrassed in his business because his debtors treat it as a small matter. But if all would pay him promptly, it would enable him to carry on his business without difficulty. Just so in the case of a newspaper publisher. See?

AN ENORMOUS LEMON.—Sec'y Lelong has at the rooms of the State Board of Horticulture a monstrous lemon 18 inches around, the long way, 15½ inches around the center, 6½ inches high and 5 inches through its greatest diameter. It weighs 3½ pounds. The tree on which it and a dozen others grew in Los Angeles was only between four and five feet high, and the weight of the fruit bent the branches to the ground.

ENTOMOLOGICAL.

Summer Remedies for Insect Pests.

[Recommended by W. G. Klee, State Inspector.]

For Codlin Moth.

The most successful remedy last season proved to be the arsenical mixtures. Of the three, Paris green, London purple, white arsenic, wherever used in the coast counties, where more or less damp nights prevail, the two latter did some damage to the foliage, and for this reason and that its effect is most lasting, the Paris green seems to be preferable.

Strength to be Used.—Of five samples Paris green analyzed last year by the University of California, four had above 54 per cent arsenic, one going 38 per cent. In accordance with this we would recommend early ripening apples and pears to be sprayed once with one pound of Paris green to 180 gallons of water, when just out of bloom. For fall and winter apples it may be advisable to spray 10 days later with an application of one pound to 200 gallons, while the blossom end of the apples are still turned upward. This (two treatments), according to my own experience, seemed safe on White Winter Pearmain, Yellow Newtown pippin, while it proved unsafe on Bellflowers. Therefore, the behavior of other varieties should be noted.

We recommend to use Paris green without any additions, simply stirring the liquid continually; also straining it before using. Use a fine nozzle, Cyclone, Crofton, or Imperial.

Sulphide of Soda and Whale Oil Soap is worthy of further trial, and especially for a third spraying about a month after the last spraying (in case of winter varieties).

For manner of preparation, see under head of summer washes for scale insects.

We propose to test both London purple and white arsenic. Eastern growers contend that one pound of arsenic to 600 gallons of water is sufficient; at present we cannot recommend it.

We believe that in isolated places, probably one spraying of Paris green will suffice; however, when the orchard is surrounded with infested orchards not treated, the full course of spraying, first with Paris green twice, and followed with sulphide and soap, seems to be necessary.

Possible Danger of Using Arsenites.

While the greatest care should be taken in handling the arsenic mixture, avoiding getting any in cuts on the hands, also preventing either human beings or animals from eating the young fruit (stock should be excluded from the orchard for at least six weeks), we believe that if no application is made after the fruit has commenced to turn downward, there is really no danger to be apprehended. The fact seems to be that, in case of an overdose being used on a tree, the foliage is affected to such an extent that the leaves on the fruit trees will fall, and with them the fruit. This is the experience in the coast climate.

Band System.

As an additional help of decreasing the last broods of codlin moth, the banding system is certainly worth following; but, besides putting bur-lap bands around the tree, say one foot from the ground, on larger trees it will be necessary to put rags in the crotches of the trees, and examine these, as well as the band, once a week.

For Plum Aphids and Woolly Aphids, Above Ground.

Four pounds of resin, three pounds sal-soda; water to make 4½ gallons. Dissolve the sal-soda in a few pints of water; when thoroughly dissolved, add the resin. Heat until dissolved, and add water finally. Use 1½ pints of solution to the gallon of water. Use at a temperature of about 100° Fahrenheit.

For Red Spider.

Experience has taught us that the eggs of this insect are almost impossible to destroy without damaging the trees, while liberal applications of sulphur washes, applied during the summer, will keep down the pest. Where the insect is plentiful and the weather favorable (hot and dry being especially so), one application will not be enough.

We have used, with fair success, the sulphide of soda wash mentioned, against scale insects. We will recommend this for further trial; also, the sal-soda and resin solution mentioned.

To the above-given solution of 4½ gallons, add 50 gallons of water; to this add sulphide of soda (1½ pounds of sulphur dissolved in one pound of lye).

Let a person follow the sprayers with a large size sulphur bellows, such as is used in vineyards, dusting the trees, while wet, all over. Calm weather should be chosen, if possible. The sulphur will adhere to the tree for a long time, if no rain falls, and acts on the spider in addition to the sulphide.

For the Twelve-Spotted Diabrotica (Diabrotica Soror).

This pest is especially extremely troublesome in sandy, gravelly lands. Spraying with the kerosene emulsion, recommended by Prof. Riley, will, if the insect appears early, before fruit is large, be useful, but spraying must be done early in the morning, while the insects are sluggish.

Kerosene, 2 gallons = 67 per cent.

For further information see report of the Santa Rosa convention, which will be forwarded by the secretary (B. M. Lelong, 220 Sutter street, S. F.), on receipt of two cents.

Common or whale-oil soap, one half pound; water, one gallon = 33 per cent.

Heat the solution of soap, and add it hot to the kerosene. Churn the mixture with means of a force pump and spray nozzle for five or ten minutes. The emulsion, if perfect, forms a cream, which thickens on cooling, and should adhere without oiliness to the surface of glass. Dilute before using one part of the emulsion with nine parts of hot water. The above formula gives three gallons of emulsion, and makes, when diluted, 30 gallons of wash.

Later on, fumigation seems to be the only practical way of driving them from the orchard. On the San Joaquin river the striped squash bug (also a diabrotica) is kept at bay by lighting smudge fires, on which a little wood tar is placed. This method will probably prove as efficacious against the spotted diabrotica.

Striped Squash Bug (Diabrotica Vittata).

Recommended by Dr. Lintner of New York: One tablespoon of saltpeter dissolved in a pail of water; sprinkle a pint on and around each hill of squashes, pumpkins, or melons. This may likewise prove efficacious against the spotted diabrotica.

Summer Washes for Scale Insects.

Infesting deciduous trees.—Solutions are applied with best result when the majority of the insects are hatched, and persons should watch for this time; the first brood of the Aspidiotus perniciosus appears generally when the cherries are turning color.

As a general useful wash, the sulphide of soda or sulphide of potash with whale oil has proved very satisfactory: 1½ pounds of sulphur; 1 pound of concentrated lye or powdered caustic soda, four-fifths of a pound, or caustic potash, 1 pound; 14 pounds of best whale-oil soap (80 per cent soap); 55 gallons of water. Dissolve the lye in one gallon of water, and boil the sulphur until dissolved. Dissolve the soap in the water; mix the two and boil them a short time; use at 130° in vessel.

This wash is useful not alone against young scale, but against the scab disease of pears and apples, also against leaf-eating insects, as saw-fly larva and pear slug. It will, however, be found that whenever Paris green has been used, these insects have been killed.

The above wash is applicable to stone fruits as well as to pears and apples.

Resin Soap.

Recommended by Sol. Runyon, Courtland, to be Sprayed on Fruit.—Ingredients for one barrel of 50 (measure) gallons: Weight, about 450 to 500 pounds; 10 pounds caustic soda, 98 per cent; 10 pounds potash, 40 pounds tallow, 40 pounds resin.

First—Dissolve the potash and soda in 10 gallons of water. When dissolved, place the whole amount in the barrel to be used.

Second—Dissolve the tallow and resin together. When dissolved, add the same to the potash and soda in the barrel, and stir well for five minutes or so. Leave standing for about two hours; then fill up with water, stirring well as every bucket of water goes in. Use the following day, one pound to the gallon of water; apply warm. This remedy is best adapted to pears and apples. W. G. KLEE.

March 26, 1888.

Mr. Klee will receive his mail henceforth at the office of the Board of Horticulture, 220 Sutter St., S. F.

Scale Insects in the Fiji Islands.

EDITORS PRESS:—Wishing to obtain further information concerning the geographical distribution of our *Icerya*, I some time ago sent letters of inquiry, accompanied by specimens both of the *Icerya* and of the red scale (*Aspidiotus aurantii*) to several of our foreign Consuls, and in reply to one of these have recently received the appended letter from the Consul for the Fiji islands, Mr. Andrew St. John. This letter was accompanied by specimens of the genuine *Icerya purchasi*, and Mr. St. John's statement that it is believed to have been originally introduced from Ceylon is interesting, since this pest has not been reported as occurring upon this latter island, so far as I am aware. He also states that our red scale occurs in the Fiji islands, but as he sent no specimens I am unable to verify his assertion. —D. W. COQUILLETT, Los Angeles.

Mr. St. John's Letter.

DEAR SIR:—I have the honor to acknowledge the receipt of yours of Oct. 14, 1887, together with inclosures. In reply would say that I have made inquiry of all whom I thought could give me information, and find that the cottony cushion scale was first known here about eight or ten years ago, and is said to be native of Ceylon. It has proved very destructive not only to orange trees and citrus fruits generally, but also to several kinds of ornamental shrubs, etc. Several remedies for its extermination have been tried by the fruit growers here with a degree of success. Among those which have proven the most effectual are:

1st. One pint of kerosene thoroughly mixed with one pound of soft soap, and added to a pailful of water; applied with a syringe.

2d. Carbolic acid diluted with water and placed under or hung on the limbs in open-mouthed bottles.

There is no insect known here that preys upon these insects. The red scale is also known here, but it is not as destructive as the cottony cushion scale. Inclosed find specimens as per request. I am, sir, your obedient servant,

ANDREW ST. JOHN.

In Memory of Fannie H. Avery.

[Written for the RURAL PRESS by D. R.]

It seemed like summer, for the sky was fair,
And o'er its breast the white-winged cloud-ships
drifted,
And all the air was tremulous with joy;
Sweet songs of birds in happy chorus lifted,
And rainbow rays of color gemmed the lawn.
It seemed like summer, but the summer's gone.
It seemed like summer, for the trees were green,
And blossoms crowned them with their regal
splendor;
And twining ivies clasped the wayside rocks,
And brooks wooed sedgy banks with murmurings
tender,
And over all the golden sunlight shone.
It seemed like summer, but the summer's gone.
It "seemed"? Ay, "seemed," for lo! the song is
stilled—
The sweetest song, sung by the fairest singer.
The flower is dead that made the wayside bright,
What matter though the others sad y linger?
And though the streamlet dances gaily on,
It is not summer, for the summer's gone.
It is not summer? Mayhap not to us
Who see through eyes grown dim with bitter
weeping—
Whose hearts are heavy with their weight of woe,
While far away the fairest singer's sleeping.
Ah, well! We bend us 'neath the chastening rod;
'Tis always summer in the smiles of God.

An Easter Card.

[Written for the RURAL PRESS by I. H.]

"Just the prettiest card you can find for a
dollar, Aunt Annie; I want to give it to Miss
Ellen at Easter, and if you knew how lovely
she is, and how much good she does me all the
time, you would not wonder that I can find
nothing nice enough for her here."

So ran the letter which Aunt Annie in the
city had just received from her niece, Ethel
Gray. She smiled a little as she read it. "Al-
ways in raptures over somebody," she said to
herself. "It is safe enough so long as she con-
fines them to her teachers. But I know the
child will be in a fidget till she has my answer,
so I had better go and execute her commission
at once."

It was not an easy task to choose among the
beautiful designs with which the shops were
filled—crosses and flowers of every imaginable
hue, surrounded by appropriate texts of Scrip-
ture or verses of Easter hymns. She turned
them over, finding them all suitable and yet
not quite satisfactory. She fancied Ethel
would like something a little out of the common
run.

"Is there nothing there that you like?"
asked the clerk who was waiting upon her.

"Yes, oh, yes; but you see this is a commis-
sion, and it is so much harder to choose for
another person. My niece, who lives in a little
country town, thinks there must be always
something new and original to be had in the
city."

"We have some hand-painted cards brought
in to-day," said the young man. "They are
different from these, at any rate." He brought
a small portfolio and opened it.

Aunt Annie looked at the first one which lay
before her, then she turned and brought for-
ward a chair, seated herself, and gazed and
gazed without a word for fully ten minutes.
People were coming and going all the time, and
the clerk had plenty to do without waiting for
her reverie to end. He was a little sur-
prised, however, when he returned, to find
her in the same position. She drew a long
sigh as she lifted her eyes.

"Whose work is it?" she asked.

"A lady brought them here this morning and
asked us to sell them if we could. I don't know
her name, but I think she is poor and needs the
money. She marked the price, but said she
would take anything we can get rather than not
sell them. That one is marked two dollars, but
if you think it is too much you can have it for
less."

"It would be a sin to take it for less," said
Aunt Annie. She took from her purse Ethel's
dollar and laid another beside it. "Please
pack it carefully; it is to go through the mail,
and I would not have it injured for twice the
sum it has cost. One moment," and she took
it from him and looked at it again as if loth to
part with it.

In the upper right-hand corner, touched in
with delicate tints as though seen from a dis-
tance, was a little country church. Over the
dim outline of the hills behind it the first rays
of the rising sun were stealing. They gilded
the slender spire and fell with a pale golden
gleam across a low mound marked with a snow-
white cross, while around it all else lay in
shadow.

In the foreground, as though held between
you and this quiet scene, was the branch of an
apple tree with its clustering blossoms of pink
and white. From one tiny twig there hung a
pierced oocoon, and just above a brilliant but-

terfly, escaped from its dreary prison, was
spreading its radiant wings for flight. Below,
in silver letters, were the words:

"Why should it be thought a thing incred-
ible with you that God shall raise the dead?"

Impressed by his customer's profound admira-
tion, the young man packed the card with the
greatest care, and having it addressed to her
niece, Aunt Annie mailed it herself on her way
home, pleased to think of Ethel's delight when
she should see it. What would have been her
disappointment if she could have known that
after all her pains and trouble it was never to
be delivered to the hands for which it was in-
tended.

Very primitive were the arrangements of the
delivery of the mail in the town where Ethel
Gray resided. Till within a few years every
one had gone to the postoffice for his own
letter. Now the town had grown so much
larger that this was no longer convenient; and
pending the time when they should have a free
delivery, like the places of more importance in
the eyes of the postoffice department, the in-
habitants were fain to accept of a substitute.
Two postmen divided the town between them,
charging a small sum for delivering the mail to
those who cared to avail themselves of their
services.

The one who came to Ethel's neighborhood
was a young man whose health was too delicate
to permit him to engage in any laborious oc-
cupation. It was a great boon to him to be able
to earn a little money by driving about in his
light cart, and if he was not altogether as care-
ful as might have been desirable, people over-
looked it from their sympathy with his misfor-
tune.

On Thursday he brought to Ethel a letter
from her aunt in which she said: "I have sent
the card which I am sure you will like; it is
quite unlike any I have seen before. Did you
ever see anything more life-like than that lovely
butterfly? I was afraid he would spread his
wings and fly while I looked at him."

But the days went on and there was no pack-
age for Ethel. Saturday must bring it; of that
she felt confident. She was at the gate when
the postman came, and held out her hand for the
expected packet. Nothing but newspapers.
"Oh, surely, there is some mistake!" she ex-
claimed. "Is there nothing for me? I expected
a letter."

"Nothing to-day," was the cheerful reply.
"It will probably come on Monday."

Ethel walked slowly back to the house, her
eyes filling with tears. What if it should come
on Monday? that would be too late. For an
instant she felt that Easter was utterly spoiled
for her by her disappointment. Then came a
swift repentance. "How can I be so wicked?
What would Miss Ellen think of me?" For
Miss Ellen had been indeed a good influence in
the young girl's life, and it was through her
that Ethel had learned her first lesson in con-
trolling her own impetuous temper. "I will
try to bear it patiently," she said, and she
went in to tell her mother of her loss, sure of
her ready sympathy.

Mrs. Gray condoled with her so heartily
that once more the ready tears sprang forth.

"But never mind, dear," she said at last.
"I will tell you what you can do instead. You
shall have all the hyacinths from the garden,
and I am sure Miss Ellen will appreciate
them, she is so fond of flowers."

Meanwhile what had become of the Easter
card? The large envelope which contained it
had slipped in between the folds of a bundle of
newspapers as the postman tossed the mail into
his cart. There it lay hidden and unseen;
there it was when passing the house where the
papers were to be delivered. He threw the
bundle over the hedge into the garden-path.
But the card did not go so far; it fell at the
edge of the sidewalk just where a careless boy
passing an hour earlier had splashed from an
open bucket a quantity of red paint. Later in
the day another boy sauntering by chanced to
catch sight of the large white envelope. He
stooped to pick it up, and saw at once that it
had not been opened.

"Hi!" he exclaimed; "if this ain't a valen-
tine! Wonder who it was for? Bless if she ever
gets it now, for no feller could make out that
writin'."

And indeed the paint had entirely effaced the
inscription, one word only being visible—Miss.
The boy wiped off the paint as well as he
could, daubing his fingers and his clothes in
the process.

"I'll take it home to mother," he said to
himself; "she can cut it open without hurtin'
the picture; and if it's a pretty one I guess I'll
give it to Miss Parsons—poor thing, lyin' there
sick all the time, she might like to have it to
look at."

Easter Sunday dawned bright and beautiful.
Very early in the morning Ethel was up, her
heart so full of the sweet and sacred associa-
tions of the day that she forgot her disappoint-
ment about the card. She was to go immedi-
ately after breakfast to help Miss Ellen to ar-
range the flowers in the church. Her mother's
beautiful hyacinths, the pride of the garden,
were packed and tied together with a white
ribbon, and she set off with a very happy
heart. At the church door she met Miss Ellen
and made her little offering.

"Oh, how lovely," her friend exclaimed;
"they are far too beautiful to keep for myself,
Ethel; we will put them in the church, and
afterward I shall have them. Let me ask you
now, dear, if you can come home to lunch with
me to-day, and go to see Alice Parsons in the
afternoon. She enjoyed your singing so much

when you went before that I thought we might
try to give her a little Easter gladness."

Ethel was only too glad to assent. She had
felt deeply interested in the sick girl whom
she had visited with her friend, and whose pa-
tience and resignation had given her a lesson
not to be forgotten.

Just before the hour for service the clergy-
man came in. He said a few words to Miss
Ellen in a low tone, and Ethel noticed that she
started, as though surprised, and presently
turned away and wiped the tears from her eyes.
What could be the matter?

She did not learn until she had gone home
with Miss Ellen and had taken lunch with the
family; then the explanation was given.

"Dear, I did not tell you sooner because I
was afraid it would sadden a day which is
otherwise so bright; but Alice Parsons will not
need our songs of praise this afternoon; she is
keeping Easter day in heaven."

"Oh, Miss Ellen!" Ethel could say no more,
she was so deeply shocked.

"It is not sad for her, Ethel. She was ready
and glad to go; but her father—I wonder how
he will bear it; she was his idol, and the faith
and hope that have been her comfort he does
not share."

"Is it not very sudden?" Ethel asked.

"Yes, though we have known she might go
at any time. I have not heard the particulars.
I will walk over toward evening and see her
aunt, and we might take your hyacinths, Ethel,
if you will go with me."

Dr. Parsons lived in the finest house in the
town; all that wealth could give lay at his com-
mand, but neither riches nor the medical skill
which had so often averted calamity from others
had been able to keep the shadow of death
from his own threshold. His wife had died a
year after their marriage, leaving him a baby
girl who was thenceforth his idol. Now the
same insidious disease which had taken away
the mother had claimed the daughter in the
very morning of her life. Lovely in person
and in character, Alice had been the darling of
her little circle, but only her father knew how
his very life seemed bound up in hers.
What was there for him now but desolation
and despair? For Dr. Parsons was one of those
men whose scientific attainments have over-
thrown their Christian faith. To him there
was no hereafter, no hope of a better life be-
yond. Science and revelation seemed to him
irreconcilable. He had taken the former for
his guide and must abide by the consequences.
Yet he had never interfered with his daugh-
ter's religious training; he had loved her all the
better for developing the same character which
had been her mother's, and although he had
not sympathized with either of them in their
deepest and highest aspirations, he had gloried
in the result, the lovely spirit that had beauti-
fied both their lives.

Miss Ellen and Ethel Gray stood beside the
quiet sleeper in the waning light of the Sunday
afternoon.

"The rapture of repose," said Miss Ellen,
softly, as they turned away, and nothing else
could have described the expression of the fair
young face. In the folded hands they had left
Ethel's beautiful hyacinths. The aunt who
had been to Alice a second mother drew their
attention to an Easter card that lay on a
little table close beside her, and after they left
the room she said: "She was so wonderfully
well yesterday, able to sit up and talking more
than she had done for a week. Johnnie Carter
came over about noon and brought her what he
called a valentine—it was that Easter card.
She was so delighted with it she made me put
it where she could look at it all the time.
Once she said to me: 'Auntie, when I am
gone give it to dear papa; tell him it is a mes-
sage from Alice.' Just at midnight she awoke
suddenly, a bloodvessel had given way; after
a little time of suffering and struggle she lay
quite still, her head on her father's breast, and
when the first rays of the eastern sun shone
through the open window she looked up with a
smile, and then she was gone."

Three years afterward Ethel, with her Aunt
Annie, was again in Dr. Parsons' home. They
were spending the day with Miss Ellen, who
was "Miss Ellen" no longer, but the doctor's
wife.

Aunt Annie uttered an exclamation of sur-
prise as she stood gazing at a picture over the
mantel-piece in the bedroom. She could not
mistake it; it was the Easter card she had
bought for Ethel; there could not have been
another like it.

"Would you mind telling me the history of
that card?" she asked with such earnestness
that Mrs. Parsons was startled.

"Not in the least," she said; "it was given
to my husband's dear daughter on the last day
of her sweet young life by a little boy who had
found it in the street."

"Ethel!" said her aunt, and Ethel looked up
with her eyes full of tears and her cheeks glow-
ing. "I have never told her, Aunt Annie; I
will now."

Mrs. Parsons heard the story of the lost card,
then drew Ethel to her and kissed her fondly.
"The blessed sequel you have yet to learn,
dear child. It was that question always before
the eyes of a desolate and heart-broken man,
'Why should it be thought a thing incredible
with you that God should raise the dead?' that
has brought him out of darkness into light; that
has made Dr. Parsons the Christian man he is
to-day; and me," she added with tears in her
eyes and voice, "and me his happy wife."

Danville, Cal.

"It Isn't Loaded."

The lesson of the following, from *Sunshine*,
has yet to be learned by a multitude of people,
trite as it may be to many:

Never handle firearms carelessly. I used to
do it, but of late years it makes me boil to have
anybody point a gun or pistol toward me. Two
events in my life have done more to inspire
within me a wholesome respect for firearms
than anything else that ever happened to me.

When I was about 15 years old I borrowed a
shotgun of a chum.

"Is it loaded?" was the first question I
asked.

"No," was the reply, and I, like a goose, be-
lieved what he said.

On the way home with it I met another boy,
who began dodging behind the shade trees as I
approached, Indian fashion. I, of course, must
do my part of the tragedy, so, cocking the gun,
I began to skulk [too, until, when we finally
met, to show that he was plainly in my power,
I put the muzzle of the gun up close to his nose
and pulled the trigger.

I thought no more of the circumstance until
evening, when I began cleaning the gun, and
found that it was clogged up so I could not
blow through it. Procuring a cap, I placed it
on the nipple, and, going to the front door,
pulled the trigger, and away she went, with a
report that awoke the neighbors for blocks
around and filled the leaves of a cherry tree
near by as full of holes as a skimmer.

Then I thought of Tom, unto whose face I
had snapped the gun. The fact that the cap
had become damp alone prevented the gun from
being discharged and blowing Tom's head into
smithereens.

Though his after life was a fizzle, and he
filled a drunkard's grave at an early age, yet
how my life would have been blighted if,
through my boyish carelessness, he had been
killed. I vowed a vow at that time never to
be careless with firearms.

One more circumstance occurred after I had
grown to manhood. I was standing on a pile
of lumber, busily engaged in measuring lum-
ber, when, hearing a "click" behind me, I
turned, and there stood a boatman pointing an
army musket squarely at my head, and sighting
along the barrel. The muzzle of the gun was
only six feet from my head, and he had just
snapped it at me. He was a man 50 years
old, and under the first angry impulse that
came over me, I said:

"You old fool, you ought to know better
than to snap a gun at a fellow's head in that
careless way."

"Aw, pshaw!" said he, "it isn't loaded."

"How do you know that?"

"Because it has been lying around my boat
for more than six months, and I know it isn't."

"That's just the reason you don't know any-
thing about it," said I.

"Well, now, you're making such a fuss
about it, I'm going to get a cap and show you.
Here, hold the gun till I come back."

While he was gone I ran the ramrod down
the barrel and found that it was loaded.

When he returned with a cap I removed the
old one and replaced it with a new one. Point-
ing the gun upward I pulled the trigger, and a
report followed, the recoil from which nearly
knocked me off the lumber-pile and raised the
boatman's hair on end.

"What do you think now?" I asked.

"Well," said he, "that's the last time I
shall point a gun at anybody if I live 100
years."

A damp cap alone saved me that time, and
though I should not have been to blame, yet
this event would have blighted my life still
more effectually than the first one, for it would
undoubtedly have blown my head off my
shoulders, and a man who finds himself in that
condition can but acknowledge that his life is,
in a measure, blighted, and his future plans and
prospects somewhat interfered with.

Don't fool with firearms. If a gun is loaded,
and everybody knows it is loaded, there is lit-
tle danger. It is the gun and the revolver
which is not loaded that goes off and kills
folks or maims them for life. So the only safe
way is to handle them at all times as though
they were loaded.

Get into the habit of so doing, then it will
become natural and easy to you, and you may
be spared the agony of gazing upon the mangled
form of some friend through whom you have
let daylight.

Always keep behind a gun yourself, and
point the muzzle away from other people.

SABBATH OBSERVANCE.—We have received
from G. P. Lord of Chicago, secretary of the
Sabbath Association of Illinois, a number of
circular petitions, which are now being sent to
the pastor of each church of all denominations
in the United States, as far as their names and
addresses can be obtained. The object is to
create such an overwhelming tide of public
opinion against Sabbath desecration as will in-
duce the Government and our great corpora-
tions to discontinue all secular business on the
Sabbath. These petitions are to be signed by
those who desire to see all business stop on Sun-
day. The petitions are addressed to the fol-
lowing as Sabbath breakers: the railways, the
telegraph companies, and the publishers of
Sunday papers. Other petitions are to be sent
to the Senate and House of Representatives.
Any one desiring to advance this movement
should correspond with Mr. Lord.

License and Law.

EDITORS PRESS:—I notice that while some of our laws are against acts that are in their nature certainly and invariably harmful, we have other laws against acts that, though not always harmful, are generally dangerous. These last mentioned seem to be precautionary rather than retributive in design, and enter largely into municipal regulations. Possibly we may have a surplus in some departments while there is lack in others. In no case is a lack more evident than in the matter of dram-drinking. The practice has no substantial benefits to offer in justification, while, on the contrary, it is more prolific of crime, poverty, and misery than any other source. Yet its advocates, with more vehemence than reason, remonstrate against any curtailment of its privilege, and cry out "personal liberty" whenever the subject is mentioned. They seem for the time oblivious of the fact that all effective law—all Government—is an abridgment of liberty; that under our Government no right or interest, not even life itself, is above legislative control. Dram-drinking and dram-selling are an exercise of personal liberty. So are theft, murder, and all other crimes. Our dram-rights advocates say: "If a man gets drunk and breaks the law, hold him responsible, but you have no right to say he shall not drink." Now, considering that besides the blight that drink casts on the interest of the living, it causes 100,000 deaths annually and three-fourths of the crime of the country, should we not question why it is not prohibited as our other dangers? Occupation of a business street of a city for a race-course or target-shooting would be prohibited as dangerous. If a man arrested on the street for "furious driving" should plead that he had not hurt anybody yet, would he be told to drive on until he did, and then call around and settle, or that he might continue by paying a license? Start a powder-mill in a town and would the authorities wait for injury to be done before ousting it?

It is just as necessary to legislate against danger as to punish crime. Prevention saves. Punishment cannot restore. Suppose a husband and father drinks himself crazy and kills his wife. The dram is a licensed article of trade. The drinking is voluntary act under rational accountable condition of mind; an act legally provided for and protected as lawful. Intoxication follows by effect of the drink on the brain through functions not controllable by the will. Involuntary conditions and acts are not in other cases treated as accountable in law. Now between the legal innocence of the drinking and the irrational condition resulting, how shall we attach responsibility or crime to drunken action?

But a murder has been committed and something must be done about it. Well, don't stop to trace the relation of cause and effect between that mother's death and the liquor-dealer's license, nor ask how his business has affected the interests of those orphaned children. Wrap the robe of legal dignity around the liquor law and over it write: "Let justice be done though the heavens fall." Human life must be protected. Proceed to hang the murderer until he is dead, and may God have mercy on his soul." Take a drink and pass on to the next case.

Thus does legal murder follow drunken murder as drunken murder follows licensed drink, and all in protection of the liquor traffic. "How long, O Lord, how long?"

March 2, 1888. THOUGHTOGRAPH.

THE CATTLE KING.—A king, a cattle king, was what they called him, this man who came loaded with diamonds and free with money, to spend the winter in a mild Southern city. A king, and yet no royal blood in his veins! A self-made monarch—and his subjects? Only the lowing herds in the far-off West. His kingdom, the frozen plains where his cattle are dying. For it is cheaper to lose half his subjects than to feed and protect the whole! He has left his ice-bound home, has closed his ears to the suffering beasts; he wraps his greatcoat close about him and seeks pleasure! Can he shut out the cries that are piercing the winter nights beyond that mountain chain out toward the setting sun? Do not dreams of the cattle—his subjects—suffering, starving, freezing and dead, haunt the pillow of this king? Murder!—surely this king did no murder. There is no blood on his hands. He only let his dumbbeasts starve or freeze to death—that is all! But there is another King!—a King whose kingdom is the universe—"And the cattle upon a thousand hills are His!" How will the cattle king stand on the day when deeds stand witness for and against us, and balanced against his gold will be the cattle—God's cattle—which he left on the plains without food or shelter, to die of slow starvation, that he might have more gold.—*Supplement to Our Dumb Animals.*

MATERIALS FOR SOAP BUBBLES.—The following recipe will make a very superior soap-bubble mixture, such as are used in scientific experiments: Take shavings of pure white castile soap, place them in a bottle, and fill with warm water. Shake occasionally for a few hours, and allow to stand over night. In the morning pour off the clear liquid and add to it nearly an equal quantity of glycerine. The bubbles blown from this mixture will be of surprising size and beauty.

YOUNG FOLKS' COLUMN.

Little Songs of Spring.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

"Rough and tumble down the hill,
Cutting capers as I go!
Thro' the orchard with a will,
Blaster, bluster, bluster, blow!
Scaring all the blossoms pale,"
Said the little gale.

"I will tell a joke or two
On the snow I've left behind,
Just to keep a merry mind,
Giggle-gurgle, gurgle-goo!
Dimpling every time you look,"
Said the little brook.

"Father's wings are strong and fleet,
Birding, too, must learn to fly.
Let your mother see you try,
Twenty-twenty, twenty-tweet!
Sweeter song was never heard,"
Said the little bird.

"Dainty dress and ribbons new,
Such a lovely Easter bonnet!
Buttercups and daisies on it,
Tirra-lirra, lifra-loo!
Face in smiles and hair in curl,"
Said the little girl.

An April Fool.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

The boys came tumbling out of school, one upon the heels of another, so glad to exchange the restraint of the close schoolroom for the freedom of the fields and an unlimited supply of fresh air. All day long they had been laboring under a sense of suppressed excitement—not altogether suppressed either. Three times had Tom Nugent fastened a pin, point uppermost, in the chair of gentle, absent-minded Richard Everett Sampson, and three times had innocent Dick uttered a loud "Oh," and three times had Master Nugent been severely reprimanded by Miss Johnson, and three black marks had he received against his name. Then Harry Hopper, nicknamed the Grasshopper, had offered the unsuspecting Dick "a good piece of drawing paper," the under side of which was thick with mucilage, and Dick in accepting it gratefully had covered his hands with the glue. Miss Johnson saw the whole proceeding and Hopper was made the subject of a lengthy lecture.

That was the worst of Miss Johnson; she saw and heard everything. It was a hard matter if a fellow could not have a little fun on April Fool's day without being obliged to pay for it in black marks.

And then Richard Everett was such a "sissy boy." He was the teacher's favorite, just because he had the face of a girl and always knew his lessons. There was Harry Hopper, who rode the wildest horse in town, and could climb the tallest tree, and was number one in every fight, and did a dozen things in fact that Richard Everett never dreamed of attempting, and yet Miss Johnson perfectly detested him, and had just called him a young ruffian, before the assembled school. Peculiar Miss Johnson!

Richard Everett was indeed a beautiful boy. He had the pale face, the high forehead and the deep eyes indicative of genius. He wrote a fairer hand than Miss Johnson did herself, and he could draw wonderfully well. He was always drawing when he was not studying or thinking.

Dick's mother was a poor widow. She had three girls younger than he, and she found it a difficult matter to feed and clothe them all and keep her boy at school. Some practical people used to say to her:

"Why don't you put the boy to work? He will be good for nothing by-and-by at his trade if you have him forever studying now. There is as much sense in it as there was in giving him a double name—Richard Everett. Dick does well enough for a lad who has his own way to make in the world."

But the mother knew her boy would never follow in the footsteps of his father.

"He will be a great artist," she said, "God willing, and his mind must control his brush. He shall be educated."

So she saved a little here and denied herself something there, and contrived to keep him at school.

Mrs. Sampson had been born to wealth and a high social station. She married her husband, a young carpenter, against the wishes of her family, and they had discarded her—all but one dear cousin, who argued that she was right. This relative died soon after her boy was born and she named the boy for him—Richard Everett. Such a bright, generous young fellow as the first Richard Everett had been. Mrs. Sampson often thought of his rich, eccentric old mother who lost in him her only child. She did not know where her aunt lived, or if she still lived, for Mrs. Everett had been one of the first to ignore the carpenter's wife.

Well, as I said, the boys came running out of school, and Tom, being in a great state of indignation over his black marks, immediately proposed to his comrades that they should play a good joke on "Miss Johnson's pretty pet."

"Let's put a placard on him," suggested one mischievous spirit. "He'll wear it all over town and never know the difference."

A large piece of pasteboard was accordingly

procured, and on it were printed with a pen these words in huge letters:

"RICHARD EVERETT,
MISS JOHNSON'S PET,
IS AN APRIL FOOL, YOU BET."

"Wait till he goes on Main street," said Tom, "to sell them pins and things for his mother; then we'll pin it on him. My! won't folks stare? And he'll never guess what's up—the little stupid!"

An hour later Dick was standing on a corner of the principal thoroughfare of the little town, a case containing needles, pins, and other small articles, fastened round his neck with a strap. I am afraid he was a poor salesman, to-day particularly. He was thinking of some descriptive verses he had read, and he made a beautiful picture from them in his mind. He wondered if he would ever be able to draw what he saw. So absorbed was he in his own thoughts, he had no idea that any of the boys were near him, when Tom crept up behind him and pinned the pasteboard to his jacket by means of bits of string passed through each end of the placard. He was only roused from his reverie by the approach of a spry little old lady, who accosted him thus:

"Have you any needles, child?"

"Yes, ma'am," answered Dick, as he straightened himself, "very fine needles—warranted neither to bend nor break."

"Why, what on earth have you on your back, child? Are you a walking advertisement?" exclaimed the little old lady, as she ran around to look.

Dick put out his hand instinctively and pulled the thing off with a jerk. "Richard Ever-ett, etc.," he read. He was somewhat crestfallen at first, but his sense of humor soon overcame his blushes.

"Oh, it's only the boys, ma'am," he said apologetically, "it's April fool's day, you see, and they like to play jokes," and he laughed.

But the spry little old lady seemed shocked. "The name! How came it there?" she gasped.

"That's my name," said the boy, "but if you don't like it, you can call me Dick. The boys do—Dick Sampson."

"Sampson? Yes, it must be so; he is Alice Patterson's child. Beautiful Alice Patterson's son peddling pins in the street! That comes of her foolishness. But after all the child is not to blame, and he has Richard's name. I'll buy all your knick-knacks," she said; "don't stand here any longer to-day. Go home and tell your mother you've seen your Aunt Amelia," and without waiting to collect her numerous purchases she pushed some money in his hand and moved rapidly away.

But it was not the last of her. Betimes the next morning she bounced through the door of Mrs. Sampson's humble home.

"I did not suppose, Alice," she said when she had greeted her astonished niece, rather stiffly, "that I should find you in this town when I came here to spend a quiet summer. Your husband is dead, I hear, and you are poor. Let me have the boy. He is like my dear son. I can't endure that a Richard Everett should peddle pins. I will make a gentleman of the child."

"Mamma," said the boy, as the poor woman hesitated, divided between her love for Dick and her desire to do what was best for him, "let me answer. I am not ashamed of my father, ma'am, and I cannot leave my mother, thanking you all the same for the offer."

"Nonsense," said Aunt Amelia, with a frown. "Well, then, I see I shall have to adopt the whole family. The man's dead at any rate—that's one consolation. Alice," she continued, addressing her niece, "you and I have both seen trouble since we last met. I am a lonely old woman, and you and your children can brighten the few remaining years of my life. Will you refuse to do so?" and Mrs. Sampson yielded.

Richard Everett is a man now, and an artist. Every year adds something to his fame, and he often says it was the most fortunate thing in the world for him that he should once have been "an April fool."

Youngsters' Notions.

Baby Will was taken to church (Episcopalian) for the first time, and seemed greatly impressed with all that he saw and heard. A few days afterward he asked suddenly, "Mamma, what are those white things we see on peaches?" "I don't know," said mamma, wondering; "where do they grow?" "Oh! not the kind of peaches that grow on trees, but the kind that *peach* in churches." He meant the surplice.

The same boy shut himself in the closet one morning, and, coming out with a very grave face, asked his mother if she had heard anything. "No," said she. "What was it?" "I said naughty words in the closet" (great contrition). "God heard them," said mamma, gravely, "whether I did or not." "Why?" asked Will, in all seriousness. "Has God got a telephone? Where does He keep it?"

The children who live in districts of deep snow enjoy a walk on the crisp crust in early spring mornings. Little Emma wanted to go out one very cold morning; but mamma said: "No, it is too cold. You shall by and by, when it gets warmer." "But the crust will all be melted then," objected an older child. "Oh, no!" cried Emma, joyfully, as a bright thought struck her; "the crust will be lovely by and by. It will be baked by the sun."—*Selected.*

DOMESTIC ECONOMY.

MINCED HAM WITH POACHED EGG.—Ham is so cut up that it can no longer be served sliced, trim off the meat from the bone and cut it very fine. Add to it half the quantity of raw potato cut into small dice. Put in a frying-pan an ounce of butter; toss the ham and the potato in it a few minutes; then add a gill of hot water or soup stock. Cover and simmer 15 minutes. Try the potatoes, and if done add a little pepper and a little chopped parsley. Turn out on a hot dish, place a poached egg on top and serve.

POLISH FOR PIANOS.—Polish or varnish suitable for polishing pianos is made as follows: Take 700 parts of alcohol, 15 parts of copal, seven parts of gum-arabic, and 30 parts of shellac. The resins are first pulverized and bolted through a piece of muslin; the powder is placed in a flask, the alcohol poured over it, and the flask corked. By putting the flask in a moderately warm place, the solution will be accomplished in two or three days. It is then strained through muslin and kept in hermetically sealed bottles.

HOW TO CLEAN BUCKSKIN.—If it is not too much saturated with grease and dirt, buckskin can be cleaned with pipe clay. If it requires further cleaning, use the best of soap and water made into a lather. Apply with a stiff brush, but do not ring or stretch the garment. When the dirt is all removed, work the skin in the hands until perfectly dry. The Indians use a mixture of brains and water beaten into a stiff paste to clean buckskin, and then it is worked by hand until dry, when the skin becomes as soft and pliable as velvet.

SWEET POTATOES SAUTE.—This is a very nice way to utilize left-over sweet potatoes. Fry a slice of onion in a pan; then remove it. Cut up two boiled sweet potatoes into slices, then into dice, and then fry them lightly in the pan. Shape them as you would an omelet and salt and pepper and a little chopped parsley and turn out on a hot dish. The onion flavor removes the peculiar flavor of the cold potatoes without its own flavor being recognized. If the onion is not objected to it can remain and be mixed with the potato.

PANCAKES.—Whisk the yolks of five eggs thoroughly and add to them four ounces of flour, half a teaspoonful of salt and a teaspoonful of sugar; stir in half a pint of lukewarm milk and the whites of the eggs well beaten. Grease a small pan slightly and fry the cakes very thin, shake the pan to prevent burning, and when they are a delicate brown on the under side turn them as artistically as possible. When done put them on a hot plate with butter and a dash of cinnamon on each and strew over the top one a quantity of fine sugar. Hold over it a shovelful of live coals to melt the sugar.

KIDNEY BEANS IN GRAVY.—The red kidney bean, which is called the French bean by some dealers, is a very nutritious and wholesome vegetable and may be cooked as our ordinary white bean, but with a gravy it is more desirable, as it may be served at almost any meal. Put into the frying-pan an ounce of butter, half a teaspoonful of dry flour and a teaspoonful of minced onion; brown slightly and add half a pint of beef gravy or rich soup stock; add the necessary salt and pepper. Now add a quart of cold boiled beans; simmer long enough to heat them thoroughly, add a squeeze of lemon juice, and they are ready for the table. If the beans are very dry, they should be soaked and boiled before using them.

APPLES WITH RICE.—Wash a pint of rice thoroughly, scald it with hot water, drain and cool; add to the rice a quart of rich milk, a quarter of a pound of sugar and a saltspoonful of salt; simmer gently an hour. When done, beat it with a wooden spoon. Wet an oval mold with water, press the rice in it and keep on ice until wanted. Peel, quarter and core five fine apples; put them in a stew-pan with three half-pints of water, three cloves, two slices of lemon and half a pound of sugar (dissolve the sugar in the water); simmer until the apples are tender, but will not break when removed from the pan. When done, strain carefully and boil down the syrup until quite thick. Now turn out the rice on a glass dish, add the apples as a border and pour the syrup over all.

NEW ENGLAND CODFISH BALLS.—Shred the codfish the night before and soak it over night; drain quite dry on a towel next day. Mash fine one pound of hot boiled potatoes. Take an equal amount of codfish and divide it very fine. Mix both together and add the beaten yolks of two eggs, two ounces of melted butter and a saltspoonful of white peppers. Now beat the mixture until it is very light, for upon this process depends the success or failure of the dish. In shaping them together, do not press them any more than is absolutely necessary. Most cooks press them into cakes so hard that it is next to an impossibility to eat them. Dredge them lightly with a little flour, and fry them like doughnuts in smoking hot fat. When properly prepared and cooked, they should fairly melt in the mouth, which they will do if thoroughly beaten and lightly handled.

The Week.

Farmers have been looking this week for the rain which has not come except in the form of a local downpour in Southern California. The north wind has been holding forth quite strongly and has used up not a little moisture. Grain-growers are somewhat apprehensive, but a good shower, which is quite likely to come, will right their affairs and faces. Orchard work has progressed rapidly during the clear weather, but has been on the whole rather backward this year. The fruit is advancing well in the early regions, especially apricots, which we saw of the size of pigeon's eggs in the Vacaville district last week. Cherries are also coming on apace, though the blossoms are suffering severely from the plucking of English sparrows, which are very expert in nipping out the young fruit and dropping the corolla. Linnets are also at the same work. Such birds must go—if they will. The newly-planted area of trees and vines is quite changing the landscape as seen from the car windows in the upper Sacramento valley especially. A wonderful amount of work has been done in that district this year. Other districts also show the result of the enlivening which results from the general popularity of our agricultural arts. It will be a year of great growth for California.

Fruit-Growers' Troubles.

One would think that the fruit-grower had trouble enough in fighting bugs and weeds, dodging assessors, arguing with railroad managers and the like, without being called upon at intervals to face difficulties which no prophetic eye could possibly foresee. Such things, however, happen along, and are most aggravating because they generally attack the gathered fruit after all the time and money has been expended upon it. Fruit-growers sometimes bear these evils in silence, but once in awhile the grievance is so great that an appeal to the courts is irresistible. Sometimes relief is gained in this way, as was secured by Robert Howe of Edendale farm, Sonoma, who was awarded a verdict on March 17th for the full amount sued for, \$2047 50, in his suit against the Schammel Packing Company of San Francisco. The case was tried in this city before Judge Levy and a jury, and was brought to recover the value of Bartlett pears sold and delivered to defendants last season. The Schammel Packing Company early in the season contracted with Mr. Howe for a large number of pears at \$1.50 per box. Later on they discovered that the fruit was selling for \$1 per box and was a glut in the market, and when the first consignment arrived from Edendale the company sought to break the contract by notifying Mr. Howe that the pears were of poor quality and they would not pay for them. As the pears were in every respect sound and excellent, Mr. Howe shipped the number of boxes contracted for, and then presented his bill. The company refused to pay and hence the suit. It is rather an old dodge to claim fruit unmerchantable when the contractor becomes tired of his bargain, and we are glad to see that the claim is not holding well. It is impossible to conduct business if men will not live up to their contracts. Fruit-buyers do not yield much when the contract proves against the grower's interests. Mr. Hall's experience will prove useful to all growers.

Another trouble which the grower labors under is the untrustworthiness of the telegraph. The whole theory of the usefulness of the expensive wire is its reliability, and unless this can be maintained it is many times worse than useless. So thinks Mr. Gilbert Tompkins of San Leandro, who has begun suit for \$575 against the Western Union Telegraph Company. The cause of action set up in the complaint is as follows: On August 9th last Tompkins sent a dispatch from Berkeley to his agent in Sacramento, ordering him to attach a car loaded with his fruit to a fast freight train going out the following day. The dispatch, though sent in the evening, was not delivered until 5 o'clock the next afternoon, too late to obey the order. In consequence of this delay it was necessary to attach the car to a passenger train which started next day, thereby causing an additional expense of \$225. The delay damaged the fruit and lowered its selling price an additional \$350, for all of which the sum of \$575 is claimed.

Here, too, is a chance to teach a good lesson, and we hope the courts will enforce it. The Telegraph Company must pay for its mistakes or else not make them. It seems to us Mr. Tompkins' claim is very reasonable and the company should be willing to pay it without suit.

MORE WOOLEN-MILLS NEEDED.—There are about 3,000,000 people this side of the Rocky mountains who are consumers of woolen goods, and these people produce wool enough to clothe nearly 20,000,000; yet we have to import from the East and abroad about nine-tenths of all the woolen goods we consume. Moreover, while we so signally fail to furnish our home supplies, we have been annually shipping to the East many thousands of dollars worth of woolen goods for over 20 years. The goods thus shipped are mostly superior qualities of army cloth and flannels. This may be set down as one of the anomalies of trade. But it furnishes the best of reasons that we should increase our woolen goods product many fold. We have the capital and every desirable means at hand for doing so. Why is it not done?

KEEPING RABBITS FROM VINES.—Ex-Congressman Luttrell tells the owners of vineyards how he has saved his from being devastated by rabbits. For several years he has planted beans among his vines. The rabbits eat the beans but do not molest the vines.

The Santa Barbara Convention.

The convention of fruit-growers, under the auspices of the State Board of Horticulture, will open in Santa Barbara on April 9th, as has already been announced. It will be a most interesting meeting, in a most interesting locality, and one which will give the visiting horticulturist the sight of more interesting exotic growths than any other single locality in the State. The horticulturists of Santa Barbara and vicinity have for years maintained a flourishing local society, and one may be sure that all the preparations for the meeting will be perfect, and the greeting as cordial as could be dreamed. The cheapest route, and a most delightful one for those who like old Neptune, will be by steamer from San Francisco. The steamer Santa Rosa will leave San Francisco April 5th, and give passengers a little time in Santa Barbara before the convention opens. The fare by steamer is \$10 each way. We understand that President Ellwood Cooper has secured rates of \$2 per day at the Santa Barbara hotels for attendants upon the convention.

For reaching Santa Barbara by rail, no definite arrangement has yet been made. Mr. Lelong has been notified by the Southern Pacific Company that if 25 or more desire to go from any point to Santa Barbara and return, they can secure the round trip for two-thirds of ordinary rates. Full fare must be paid in going, and return tickets will be furnished in Santa Barbara for one-third usual rates. It will be well for those who desire this concession to write to Secretary Lelong (220 Sutter street, S. F.), at once, to see if the required 25 persons can be secured. Otherwise full fare will have to be paid by those who attend.

The convention will be full of interest inside and out. A full line of talent, in the way of essayists, was shown by the announcement in the RURAL of Feb. 25th, and no doubt most interesting and instructive discussions will follow. Outside of meeting hours there will be excursions to adjacent points of horticultural, historic and esthetic importance. It will be a good chance for our fruitmen to unbend a little before the heavy work of another season commences. Be sure also to take the ladies along. They will be brighter all summer for the spring outing.

The Experiment Stations.

We give on another page an account from a local exchange to show what the enterprising people of Amador county are doing toward the installation of the University Experiment Station in their midst. It will be seen that they propose to turn over to the University authorities a very well equipped station, and work has already been commenced, as the necessary funds have all been subscribed. We print the account from Amador merely to show residents of other districts which may come within Prof. Hilgard's divisions of the State, that if they desire stations they should not lose time. Already there have been placed on file at the University propositions from other points very much like that from Amador, but they are held under consideration until other localities may have a little time to enter the lists, so that selections can be made which will be of the widest public benefit and advantage. For this reason, the people in all regions, who are considering the matter, should hasten their canvasses to see if the necessary lands and funds can be had. Unless this be done, it is, of course, possible that some point of great desirability for experimental work may fail of consideration, because the residents did not declare their intentions speedily or definitely enough. We speak thus plainly, because the RURAL has urged the establishment of these stations from the first, and we do not desire the claims of any locality to pass unnoticed because of lack of information of requirements. It is not likely that all stations will be definitely selected at once, but applications, with some guarantee that the conditions will be complied with, should not be postponed.

NOT SOLD.—The report that Anteeo, the noted trotter, had been sold to a Kentuckian for \$20,000 has been denied by the owners. The above amount was offered, but arrangements regarding his removal could not be agreed upon.

CHIEF JUSTICE WAITE of the U. S. Supreme Court died March 23d.

Death of the Originator of Proper Wheat.

Edward Proper, from whom the well known Proper wheat gets its name, died quite suddenly Friday evening, March 16th, at his home near Gaither Corners, Sutter county.

Mr. Proper was born in Fulton county, New York, in 1830, and consequently was 58 years of age. On coming to California, he first resided at West Butte, and in 1852 purchased from the Anderson Bros. the farm upon which he has ever since resided, about ten miles southwest of Yuba City.

A score of years ago, while he and a Mr. Anderson were harvesting on his farm, some barley, the seed of which had come from Chili, they found a single head of extraordinary wheat. This he saved, sowed the following year, and continued until he had a field of it, and again until it went in every direction. All this time the quality and original features of the wheat maintained themselves, and thus was established the "Proper wheat," one of the best if not the best milling wheat in existence.

Mr. Proper is spoken of by his neighbors as a man whose sterling integrity and industrial worth were exemplified in every-day life, a loving husband, a kind parent, a steadfast friend and an upright citizen, highly respected by all who knew him. During his funeral business was generally suspended, and there was a large attendance. Such was evidence of the esteem in which Mr. Proper was held at home. His enterprising act in caring for and developing the variety of wheat which bears his name has given him fame in the great markets of the world and assured him a permanent place in the agricultural history of California.

The Coming Bench-Show.

Entries for the bench-show, which is to be held in this city next week, closed nominally on the evening of the 27th with over 200 dogs booked; but the list is actually kept open a few days longer, to accommodate a number of ladies who have pets to show, and it is probable that nearly 300 animals will be on exhibition.

The officers and members of the Pacific Kennel Club have exerted themselves to good purpose in working up and preparing for the approaching display. Pointers and setters are most numerously represented, and next to them the greyhounds. Then come the Great Danes—an enormous variety of bloodhounds—St. Bernards, fox-hounds, spaniels, terriers, etc., in great variety.

Mr. Davidson, judge of the sporting classes, arrived from Monroe, Mich., last Sunday, and Mr. Watson, who is to judge the non-sporting classes, is expected here from Philadelphia on Saturday.

The show opens in the Mechanics' Pavilion, Wednesday, April 4th, and continues until Saturday, 7th, inclusive. It promises to be very interesting and brilliant.

A RETURN THRUST AT THE CONTINENTAL HOG. We recently alluded to the indignities heaped upon the American hog abroad, and lamented the fact that he could not be officially shown at the coming Paris exposition. It is encouraging to see that these wrongs are not forgotten, for President Cleveland has sent to Congress a message recommending legislation to prohibit the importation of swine from France and Germany. It is accompanied by communications from Minister Pendleton and the Consul at Marseilles. The communications are in the nature of statistics showing the prevalence of contagious and infectious swine diseases in both countries. It is on account of these diseases that the President recommends the prohibition of importations. It is high time that the outrageous, diseased continental hog was ordered to be eaten at home.

OREGON LIVE-STOCK.—Grant Mays, a stockman who lives at Antelope, Wasco county, has lately told the *Oregonian* that the past winter was one of the best for stock experienced in Eastern Oregon for several years. The loss of sheep was very light, while cattle did not suffer at all. Stockmen generally had plenty of hay, but were not required to feed their stock for a longer period than two weeks. In Harney and Malheur counties the loss was heaviest, reaching about 30 per cent for both sheep and cattle.

A FORDING SCENE ON THE FEATHER RIVER, AT RIO BONITO.

Los Angeles Flower Festival.

The Los Angeles Flower Festival Society has done beautiful and blessed work the past three years in holding floral fairs each successive spring, and with the proceeds founding and endowing the Woman's Home. It is now announced that their fourth annual festival will be formally opened at Hazard's pavilion, corner of Fifth and Olive streets, Los Angeles, on Tuesday, April 17, 1888, at 8 P. M., and will continue two weeks.

The Los Angeles Orphans' Home is to be made the beneficiary this year, after paying a little debt which was incurred in fitting up the restaurant and reserving a small emergency fund. We append extracts from the circular lately issued by the managers:

Even in our city in the full tide of its prosperity, the throng of the homeless little ones has long outgrown the meager accommodations of our present Orphans' Home. Realizing the wisdom of building not only for the present but the future, the management of the Orphans' Home has already begun the erection of a commodious and substantial brick structure at an estimated cost of \$50,000. This will enable them to give additional comfort and care to the 80 little ones now in the home, and to open its doors to many more helpless children. In the name of these little ones, your aid and influence is asked for the fourth annual flower festival.

Mrs. M. A. Bates, professional decorator, has furnished an original design, wholly different from any former arrangement. She will superintend the construction of an exhibit which, with the experience of the society, it hopes to make most beautiful and unique. The plan and framework of all booths will be provided without expense to exhibitors.

Every town in Los Angeles county is cordially invited to make an exhibit, but no application will be considered after March 31, 1888. No charge is made for space. Florists and other large growers who desire to enter exhibits should apply immediately.

Four prizes are offered by the F. F. S., two of \$200 and \$150 respectively, for the best exhibit and second best exhibit of flowers made by any town other than Los Angeles. In awarding these the quality of flowers as well as the taste and neatness of the booth will be considered. Two prizes of \$100 and \$75 are offered for the handsomest original floral designs. These to be kept in perfect order during the festival.

The ladies of the society will provide entertainment for two representatives from each section.

Places and persons who cannot send an exhibit are invited to contribute flowers, food, or fruit, and those who undertake to collect and forward such donations are requested to notify the secretary. The S. P. and the A., T. & Santa Fe railroad companies have kindly agreed to transport free of charge all such donations shipped over their lines. All such should be marked plainly, "Flower Festival, Hazard's pavilion, Los Angeles."

Any one desiring to become a member of the society, the Orphans' Home or Woman's Exchange, can

do so by applying to the financial secretary, Mrs. W. B. Abernethy. Applications for space should be made to the president, Mrs. R. M. Widney, 310 South Olive St., Los Angeles.

We wish and anticipate for these benevolent ladies a success even surpassing those they have before achieved both in loveliness of the display and in winning means of humane beneficence.

California Scenes.

The upper engraving on this page gives a scene which in its main features is characteristic of many river crossings in California. Outside of the hilly portions of the State, our rivers flow in wide, shallow beds, as might be expected of rivers which sometimes carry large and sometimes very small volumes of water. The shoaling has been greatly aggravated by deposit of mining debris, which is happily a thing of the past, though its effects remain. The scene is a ford of Feather river, near the colony of Rio Benito, in Butte county, and the photographer happily chanced upon it just as a large band of horses was being driven over. The stream, which is easily crossed, as shown when low, becomes a wide and treacherous flow during times of high water.

The lower engraving is also a typical California scene, showing how our gently rolling lands

are being brought to great value by plantations of fruit. The scene shows the homestead and vineyard of Hon. E. B. Smith, president of the Contra Costa Board of Trade, situated near Martinez. Mr. Smith has a large area of the best wine grapes and a winery of his own, the product of which is securing an excellent name. His home is delightfully situated, being well protected by the surrounding hills, from some of which a charming view is obtained of Mt. Diablo and some of its adjacent hills and valleys, which form a picturesque view to the southward. This is a very charming section of Contra Costa county, and one of the most delightful home-building places in the State.

THE CHICO FORESTRY STATION.—Gen. Bidwell's tract of land, which he recently donated to the State, is soon to be used as an experimental station by the State Board of Forestry. It is about 42 acres in area, and it is said to be very well located. It is bounded on the north by a fine stream of water, and is situated near Chico. H. S. Davidson, the engineer for the California State Board of Forestry, and H. R. Lee, the forester in charge, went to Chico on Monday for the new plantation, and a force of men have already been engaged for the work.

THE fruit-growers at Lincoln, Placer Co., have organized a fruit-shipping company.

QUERIES AND REPLIES.

The Soapberry Tree.

EDITORS PRESS:—I am a new subscriber to your paper and a new-comer to your State, and am in quest of any information relating to horticulture, climate and health. The RURAL has been very interesting to me so far.

You will find herewith inclosed a few seeds which I wish you to identify. I found the tree from which they were taken in Southern Texas last fall. It at once impressed me as a most desirable shade and ornamental tree for a dry, hot climate, as the spot where it grew indicated. I thought on first sight that it was a species of China tree, but I am doubtful of that now. Here is a description as it appeared in January: A dense round head as broad as its height; the limbs and twigs bowed with their load of seed; slender limbs and twigs. The seeds were more like large bunches of golden yellow grapes. On examination you will see that they are transparent, and that when the skin and pulp are broken the seed can be taken out clean. The bark of the trunk was a little corky or scaly, resembling an ash or coffeenut tree.

I was told by the owner that it was magnificent in bloom, and in foliage a very dense shade. He bought the place recently and knew nothing of the origin of this tree.—W. T. KIRKMAN, Perkins, Sacramento Co.

The tree is the soapberry, probably *Sapindus marginotus*. It is certainly worth a trial as an ornamental tree, and we hope Mr. Kirkman will get some plants from his seed. Has any reader other information to give concerning it?

Clearing Land.

EDITORS PRESS:—When some weeks ago I raised the subject of killing brush in your paper, the subject appeared to me to be one of general interest; but issue after issue came out without its evoking any correspondence until your publication of the 10th of March, containing Mr. Scranton's interesting letter, which I may remark has been copied into the *Clear Lake Press*. My own experience in clearing is small, but last fall, October and November, I cut down and afterward burned on the ground, chemical, which I see is already sending out shoots from the old roots, my experience thus differing from Mr. Scranton's. In regard to live oak I cannot speak, as mine have been grubbed. I am now cutting some and shall do so throughout the seasons, hoping to come to some definite conclusion. A neighbor of mine tells me that he has succeeded best by cutting all kinds of brush about June when full of sap, and says that even live oak treated in this way will often die.—P. S. M. ARBUTHNOT, Lower Lake.

From Another Correspondent.

EDITORS PRESS:—To the one that asks for information how to subdue the growth of undesirable scrub trees and shrubbery, I will give my experience. It is to cut them just under the surface of the ground in the month of August, or when the sap is in the roots; this method will effectually kill them, root and branch.—MRS. A. L. A., Fresno Co.

What Hurt the Trees.

EDITORS PRESS:—I have four six year-old apple trees that the bark has loosened from the tree and pulled off. What is the cause; was it freezing?—W. P. C., Mariposa Co.

THE HOME OF HON. E. B. SMITH, NEAR MARTINEZ.

State Agricultural Society.

Speed Program for the State Fair.

The State Board of Agriculture met March 22d, at the Secretary's office in Sacramento, for the purpose of arranging the premium list, speed program, and preparing in general the necessary preliminaries for the State Fair of 1888. The *Record-Union* reports as follows:

President Shippee presented the following official report of the experts upon the affairs of the Secretary:

STOCKTON, Jan. 13, 1888.

Hon. L. U. Shippee, President State Agricultural Society—SIR: The undersigned, having been requested by you to fully and carefully examine the books and accounts of the Secretary of the State Agricultural Society, beg leave to submit the following report:

Our work began with the fiscal year commencing February 1, 1881, and our study and examination of the books, accounts, and all financial transactions of the Society extending from that date up to and including December 31, 1887.

We had full access to all the books and accounts of the Society, and to any and all memoranda desired or asked for, and we believe made a complete and thorough examination.

The source of receipts of the Society was a matter that received our closest attention, and it was found that everything was accounted for with the exception of the sum of 40 cents—\$3037.75 on September 16, 1882, being entered up as \$3037.35.

All disbursements are represented by correct vouchers, produced by the Secretary and thoroughly examined by us, but we found that voucher No. 156, of 1883, showed the following amount paid and receipted, \$17.26, and charged up as \$13.56, leaving a balance in favor of the Secretary of \$3.70.

The system of keeping the accounts adopted in August, 1881, and pursued to the date of the termination of our work, is as nearly complete as may be, especially considering the fact of the volume of business necessary to be transacted, and the handling of large and small sums of money, during the limited space of time permitted by the State Fair.

The system used for the receipts and disbursements of moneys that pertained to speed contests is particularly creditable to the officer responsible, no error being found that was detrimental to the society, and only one that could be to its patrons, and that was corrected immediately after its discovery, and the proper voucher shown for it.

We find the following amount, \$388, of premiums unpaid and unchanged for the interim between 1881 and 1887.

All other claims and accounts appearing against the society, exclusive of those shown in the profit and loss account and balance-sheet for 1887, are paid, and vouchers on file.

We append herewith a full statement of the receipts and disbursements, together with profit and loss accounts for each year, showing in the latter account a loss of \$5285.69 on Dec. 31, 1887, being the net loss for the years 1881 to 1887, inclusive.

We find that the amounts of the appropriations received from the State of California are, from 1881 to date, \$77,500; that the amount paid for premiums was \$77,995.36, and further, that the disbursements on account of permanent improvements made by the society, exclusive of the appropriations made by the citizens of Sacramento and of the State of California for the building of the pavilion, to have been \$57,382.87.

We inclose herewith the balance-sheets for the several years named in this report, with our signatures attached to each, which have been in our possession since proof. Respectfully submitted.

ARTHUR W. BELL,
J. M. LA RUE,
Accountants.

Speed Program.

The following speed program for the State Fair, 1888, was adopted:

First Day—Thursday, Sept. 6th—Trotting.

- No. 1—The Occident stake; \$400 added.
No. 2—Trotting; 2:23 class; purse, \$1200.
No. 3—Pacing; 2:30 class; purse, \$600.

Second Day—Friday, Sept. 7th—Running.

No. 4—The Introduction Stake, for two-year-olds; \$25 entrance; \$10 forfeit; \$250 added, of which \$50 to second; third to save stake. Winner of any two-year-old race this year to carry three pounds; of two, or more, five pounds extra. Three-quarters of a mile.

No. 5—The California Breeders' Stake, closed in 1887 with 11 nominations; 1½ miles; \$300 added.

No. 6—The Capital City Stake; a sweepstakes for three-year-olds and over, in which only non-winners in any event this year will be eligible to start. Winners of any race, entered herein, may be withdrawn without incurring a forfeit. Entrance, \$50 h. f., with \$400 added, of which \$100 to second; third to save stake. One mile and one-eighth.

No. 7—Free for all ages; purse, \$250, of which \$50 to second; winners of any race this year to carry five pounds; maidens, if three years old, allowed five pounds; if four years old, or upward, 15 pounds. Mile heats.

Third Day—Saturday, Sept. 8th—Trotting.
No. 8—Two-year-old Stake, closed March 15th with 16 nominations; \$300 added.

No. 9—The grand Stallion Stake, closed

March 1st with six nominations; \$500 added for each starter up to four.

No. 10—Trotting; 2:30 class; purse, \$1000.

Fourth Day—Monday, Sept. 10th—Running.

No. 11—The Premium Stake, for all ages; \$50 entrance, h. f. or only \$15 if declared on or before Sept. 1st, with \$350 added, of which \$100 to second; third to save stake. Horses that have started and not won this year, allowed five pounds. Maidens, if three years old, allowed five pounds; if four years old, or over, 7 pounds. Three-quarters of a mile.

No. 12—The California Annual Stake, for two-year-olds, closed in 1887 with 32 nominations; \$250 added. One mile.

No. 13—The LaRue Stake—A handicap, for all ages; \$100 entrance; \$50 forfeit, with \$500 added, of which \$150 to second; \$100 to third. Weights announced September 1st. Declaration \$20, to be made with the secretary by 8 o'clock p. m. September 3d. In no event will declaration be received unless accompanied with the amount fixed. Two and one-quarter miles.

No. 14—Selling purse, \$300, of which \$50 to second; for all ages. Horses entered to be sold for \$1500 to carry rule weights; two pounds allowed for each \$100 less, down to \$1000, then one pound for each \$100 less, down to \$500. Valuation to be placed on starters only, by 6 o'clock p. m. the day preceding the race. One mile and a sixteenth.

Fifth Day—Tuesday, Sept. 11th—Trotting.

No. 15—Three-year-old stake, closed March 15th, with 19 nominations; \$400 added.

No. 16—2:20 class, purse \$1200.
No. 17—3:00 class, purse \$1000.

Sixth Day—Wednesday, Sept. 12th—Running.

No. 18—The Sunny Slope stake, for two-year-old fillies; \$25 entrance; \$15 forfeit, or only \$10 if declared on or before September 1st; \$200 added, of which \$25 to second. Those that have started and not run first or second in any race this year, allowed five pounds. Five-eighths of a mile.

No. 19—The Shafter stake, for three-year-olds; \$50 entrance; \$25 forfeit, or only \$15 if declared on or before September 1st; with \$400 added, of which \$100 to second, third to save stake. Winner of any race this year to carry five pounds extra; of two or more, ten pounds; maidens allowed five pounds. One mile and a quarter.

No. 20—The Del Paso stake, for all ages; \$50 entrance; \$25 forfeit, or only \$15 if declared on or before September 1st; with \$300 added, of which \$100 to second, third to save stake. Three-year-olds to carry 100 pounds; four-year-olds, 110 pounds; five-year-olds and upward, 112 pounds; sex, but not heat allowances. Three-quarter mile heats.

No. 21—Free purse, \$300, of which \$50 to second; for all ages. Horses that have started and not won at this meeting allowed ten pounds, winners of any race at this meeting, when carrying rule weights, or more, to carry five pounds extra. One mile.

Seventh Day—Thursday, Sept. 13th—Trotting.

No. 22—2:25 class, purse \$1000.

No. 23—The four-year-old stake, closed on March 15th, with 12 nominations; \$400 added.

No. 24—Pacing, free for all; purse \$800.

Eighth Day—Friday, Sept. 14th—Running.

No. 25—The California Derby stake for foals of 1885, closed in 1886 with 29 nominations, \$300 added. One and one-half miles.

No. 26—The Palo Alto stake, a handicap for two-year-olds; \$50 entrance, \$25 forfeit, \$10 declaration, \$400 added, of which \$100 to second, third to save stake. Weights announced 10 o'clock a. m., Thursday, Sept. 13th; declarations due at 6 o'clock p. m. same day. One mile.

No. 27—The Golden Gate stake for three-year-olds; \$50 entrance, \$25 forfeit, or only \$15 if declared on or before Sept. 1st, with \$400 added, of which \$100 to second, third to save stake. Winner of any three-year-old race at this meeting to carry five pounds extra; colts not one, two, three, in No. 19, allowed ten pounds. One mile and three-quarters.

No. 28—Nighthawk stake, for all ages; \$50 entrance; \$15 forfeit; \$300 added, of which \$100 to second; third to save stake; \$200 additional if 1:41½ is beaten. Stake to be named after the winner if Nighthawk's time (1:42½) is beaten. One mile.

No. 29—Free purse \$250, of which \$50 to second; for non-winners at this meeting. Horses that have started and not run second allowed ten pounds; winners of any race entered herein may be withdrawn without penalty. One mile and one-sixteenth and repeat.

Ninth Day—Saturday, Sept. 15th—Trotting.

No. 30—Great free-for-all trot; purse, \$1500.

No. 31—2:40 class; purse, \$1000.

No. 32—Pacing; three-year-old class; \$300.

Entries for the following running events for 1889-90 were ordered to be closed at the same time as the races on the regular program:

No. 1—California Breeders' stake for foals of 1886, to be run at the State Fair of 1889; \$50 entrance; \$25 forfeit, or only \$10 if declared January 1, 1890; \$300 added, of which \$100 to second and \$50 to third. One mile and one-quarter.

No. 2—California Annual stake, for foals of 1887, to be run at the State Fair of 1889; \$100 entrance; \$25 forfeit, or only \$10 if declared

January 1, 1889; \$250 added; second colt, \$100; third, \$50. One mile.

No. 3—California Derby stake, for foals of 1887, to be run at the State Fair of 1890; \$100 entrance; \$50 forfeit, or only \$10 if declared January 1, 1889; \$15 if declared January 1, 1890; \$25 if declared May 1, 1890; \$300 added; second horse, \$100; third horse, \$50. One mile and one-half.

Remarks and Conditions.

All trotting and pacing races are the best three in five, except the two year-old, unless otherwise specified; five to enter and three to start. But the board reserves the right to hold a less number than five to fill, by the withdrawal of a proportionate amount of the purse. Entrance fee 10 per cent on purse, to accompany nomination. Trotting and pacing purses divided at the rate of 50 per cent to first horse, 25 per cent to second, 15 per cent to third, and 10 per cent to fourth.

The National Association Rules to govern trotting, but the board reserves the right to trot heats of any two classes alternately, if necessary to finish any day's racing, or to trot a special race between heats. A horse making a walk-over shall be entitled only to the entrance money paid in. When less than the required number of starters appear, they may contest for the entrance money, to be divided as follows: 66⅔ to first and 33⅓ to the second. In all the foregoing stakes the declarations are void unless accompanied by the money.

Please observe that in the above stakes declarations are permitted for a small forfeit.

In all races entries not declared out by 6 p. m. of the day preceding the race shall be required to start.

Where there is more than one entry by one person, or in one interest, the particular horse they are to start must be named by 6 p. m. of the day preceding the race. No added money paid for a walk-over.

Rules of the State Agricultural Society to govern running races, except when conditions named are otherwise.

Non-starters in running races will be held for entrance under Rule 3.

Racing colors to be named in entries.

In trotting races drivers will be required to wear jackets and caps of distinct colors, which must be named in their entries.

Entry blanks and racing rules will be furnished upon application to the secretary. Entries in all, except otherwise stated, to close with the secretary Wednesday, August 1, 1888.

L. U. SHIPPEE, President.

EDWIN F. SMITH, Secretary.

Improvements at the Park.

The board has decided to raise the grand and special stands at the Park and improve them in general. Plans and specifications will be ready in a few days for contractors to figure upon.

The following resolution respecting the importation of live-stock for exhibition from other States was adopted:

WHEREAS, In the absence of any State quarantine laws in this State, it is deemed proper to use every precaution to prevent the importation of any animal afflicted with contagious disease; therefore

Resolved, That all live-stock be prohibited from exhibiting or competing for premiums at the State Fair of California that is not in the State on or before July 1st of each year. This does not apply to horses entered in races.

The pooling privilege for the current year was let to Jasper N. Killip of San Francisco for the sum of 65 per cent of the commissions.

Superintendent Hancock was directed to have a line of shade trees planted in front of the cattle-stalls at the Park.

Premium List.

The premium list was next considered, and the following are the most material changes made:

In the Live-Stock department the following rule was adopted: "In this department animals may be entered in their respective classes, and as a sire or dam, or junior member of a family, and in sweepstakes, any sire or dam competing in a race will be allowed to enter for a premium as one of or at the head of a family."

Stallions six years old and over, and jacks four years old and over, must show two colts to entitle them to compete for premiums.

Carriage horses must not be less than 16 hands high, nor weighing under 1200 pounds; must match in style, action and symmetry of form, but not necessarily in color; must be shown to carriage.

Roadsters must not be used as track horses. In the cattle classes the general sweepstakes were stricken out and a sweepstake substituted in each class.

In the Sheep department lambs were designated as those dropped on or after January 1st of each year. Those dropped prior were to be designated as yearlings.

The Pavilion departments, other than acted upon, were referred to a committee consisting of Green, LaRue and Hancock.

Special Premiums.

The following special premiums were offered in the ladies' department by the gentlemen named:

President Shippee—For best display of embroidery, \$20.

Director Chase—For best painting on porcelain, \$20.

Director Cox—For best display of decorative painting, \$20.

Department Superintendents.

The following department superintendents

were named: First department—thorough-breds—Shafter and Boggs; horses of all work, Singletary and Perkins; draft horses, Singletary and Perkins; roadsters, Green and Singletary; carriage horses, Green and Singletary; standard trotters, Hancock and Chase; saddle horses, Singletary and Perkins; sweepstakes, Shippee, Singletary and Cox; cattle, Carr and Cox; sheep, Hancock and Green; goats, Chase and Hancock; swine, Chase and Hancock; poultry, Chase and Hancock; pavilion departments, LaRue.

The ladies' tournament was ordered to be given same as last year.

After considering other matters concerning details of the coming fair, the board adjourned.

THE STOCK YARD.

Nevada Live-Stock Association.

The Nevada Live-Stock Association was organized at Winnemucca February 12, 1884, for the purpose of encouraging and promoting the live-stock industry and protecting it as far as possible from the depredations of cattle and horse thieves. Forty-four persons, among whom were the wealthiest and most extensive live-stock owners on the coast, signed the roll of membership at the first meeting.

The *Silver State* avers that the objects of the organization have to a great extent been accomplished. Horse-stealing is a thing of the past in Nevada, and complaints of cattle being stolen are seldom heard. The association has prosecuted several alleged cases of cattle-stealing, and, though failing to secure convictions for lack of evidence or other causes, the moral effect of the prosecution has been noticeable, and the poor man, as well as the rich man, no longer feels that a cow or a steer which strays from its accustomed range is stolen. They have not prosecuted any one, nor sought to control courts or juries by disreputable means, and in every instance where an alleged offender has been prosecuted a grand jury, not dominated or controlled by the Live-Stock Association, found an indictment, the evidence being sufficient, unexplained, to warrant the assumption that the defendant was guilty.

The annual meeting was held at Winnemucca, in the courthouse, March 20th, President George Russell of Elko in the chair. In consequence of the non-arrival of passenger trains from the west, the attendance from that part of the State was limited to a few who arrived on Monday.

The secretary and treasurer submitted their annual reports, which were accepted, and officers for the ensuing year were elected as follows: President, N. H. A. Mason of Lyon county; vice president, O. North; secretary, Geo. S. Nixon; and treasurer, F. D. Sweetser of Humboldt county.

The following Executive Committee was selected: N. H. A. Mason of Malheur county, Oregon; George Watt of Lander and Nye counties, Nev.; A. C. Cleveland, White Pine and Lincoln; J. D. Bradley, Geo. Russell, J. B. Moore and J. B. Garratt of Elko; J. D. Ford of Eureka; O. North, Joseph Marzen, F. D. Sweetser, B. F. McCurdy and J. H. Thies of Humboldt; T. B. Ricey, Douglas and Ormsby; Lewis Dean and A. C. Bragg, Washoe; C. H. E. Hardin, Lyon and Esmeralda; Isaac Foster, Grant county, Oregon; W. S. Bailey, Churchill county, Nevada.

The Secretary's report showed that the total receipts for the year were \$6409.94, and the disbursements \$6138.54, leaving a balance of \$271.40 in the treasury at date of meeting. There are 100 members in good standing, representing 149,271 cattle, 12,244 horses and 50,000 sheep, the value of which is estimated at over \$3,000,000.

The officers in their reports say: "In the way of prosecutions, several cases have been handled, and a good deal of money expended to bring the guilty to justice, and although no convictions have been made, we feel that indirectly a great deal of good has been accomplished, as the simple knowledge that the association will assist in the putting down of thievery has a quieting effect on certain parties that otherwise would consider it a small matter to get away with everything in reach; but as it is now, the cost of getting clear, with the association on their heels, is too great for the gain to be made by stealing. The one reward paid by the association in the past year was for horse stealing, and the party got three years in the Oregon State prison."

The next annual meeting will be held at Elko on the third Tuesday in March, 1889.

BADLY COW-BITTEN.—An Italian rancher at Dayton, Nevada, who lately found a cow choking with a potato, thrust his hand into her mouth and pushed the potato down her throat. When he attempted to withdraw his arm the beast closed her jaws upon it with the grip of a vise. The arm was finally extricated by prying the cow's jaws open with an iron bar. The bones of the forearm and the flesh were so crushed that amputation was thought necessary to save the man's life.

WATER REGULATOR.—Some time ago a reader of the *RURAL* sent us a little sketch of a device which he had used for regulating the flow of water in hillside ditches. We made an engraving but have lost the manuscript describing the device, and have forgotten the name of the writer. Will he kindly write us about it?

THE LOUISIANA TRACT!

SITUATE ONE MILE FROM THE FLOURISHING

City of Sacramento,

With a Population of 30,000, and

$\frac{1}{4}$ MILE from Terminus of an ELECTRIC RAILWAY, now in course of construction.

SUBDIVIDED INTO 5-ACRE LOTS.

Soil is Deep and First-Class Fruit Land.

CITRUS AND ALL DECIDUOUS FRUITS, and the choicest of Plants reach the highest state of perfection upon this soil.

30 ACRES OF TRACT IS GOOD ALFALFA LAND, from which three crops a year can be cut. 5 ACRES IN FRUIT, well attended to, will make a handsome income. One Acre in Strawberries will net \$400 a year.

WATER IN ABUNDANCE at a depth of 30 feet. One Windmill, costing \$80, will irrigate five acres.

PRICE FROM \$175 TO \$250 PER ACRE.

TERMS.—One-fourth cash. Deferred payments in five annual installments; interest at 7 per cent, free from taxes. Title perfect.

Healthiest Location and Best Market in the State.

HOMES and RANCHES!

E. TUCKER,

Real Estate Agent,

MYERS ST., OROVILLE, BUTTE CO., CAL.

Improved and unimproved lands to any extent from 5 to 5000 acres with good, comfortable homes and all necessary conveniences, for sale on desirable terms. These lands require no irrigation, Railways convenient, ample supply of water, and the climate cannot be surpassed. Apply as above.

PALERMO LAND & WATER CO.

DIRECTORS.

GEORGE C. PERKINS. HENRY WISE. D. K. PERKINS
C. W. McAFEE. A. S. BALDWIN.

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES

At \$75 per Acre.

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. One hundred and seventy-five acres at Palermo are now being set out in the choicest varieties of Florida Orange Trees. Maps and further particulars of

SANTA YNEZ,

Santa Barbara County, California.

THE SANTA YNEZ LAND AND IMPROVEMENT COMPANY

Is now offering for sale at low prices and upon very moderate terms the choicest of

Agricultural and Horticultural Lands

Of the famous College Grant, in the aforementioned beautiful valley. The CLIMATE is perfect, SOIL rich and diversified, TOPOGRAPHY unusually varied and beautiful, a park-like growth of Oaks covering the entire valley. WATER SUPPLY more than sufficient for irrigation of all irrigable lands, and no alkali either in water or soil. TRANSPORTATION FACILITIES superior now, and two trunk lines certain to pass through the valley within a year.

43,000 ACRES OF THESE CHOICE LANDS

Are for sale at from \$25 to \$150 per acre; terms of payment being one-third cash, one-third in two, balance in three years; six per cent interest on deferred payments.

To reach the Santa Ynez valley take any transportation line to San Luis Obispo, thence by Pacific Coast Railway to Santa Ynez or to Santa Barbara, thence by stage to Santa Ynez. Persons seeking lovely homes or lands for home or quickly paying investments, cannot do better than purchase here. For further information refer to

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

PROMISE OF APRICOTS.—Haywards Journal, March 24: The coming apricot crop will be very light. A buyer for a well-known fruit-house was visiting our orchardists last week. He attempted to make many believe that there was going to be lots of 'oots, and in talking with Judge Blackwood tried a little bluff, by offering to sell him 150 tons at 1½ cents. Now Judge Blackwood is the wrong man to run such a barefaced bluff on, and he made the smart young man show his hand by at once accepting the offer, and requesting him to step inside while he drew up the contract. The buyer wilted and drove off.

Amador.

CROP OUTLOOK.—Jackson Ledger, March 24: Both grass and grain are backward. Many stockmen are still obliged to feed their cattle, the grass being too short to sustain them. It is hardly possible to have more than an average crop, and unless the spring rains are unusually abundant and timely, the crops will fall considerably below the average. After this date last year 5.15 inches of rain fell in Jackson. We need at least twice that amount to insure fair average crops this season. Fruit trees are beginning to bloom, but it is too early to form any estimate of the probable yield.

Contra Costa.

AUGMENTING ORCHARDS.—Walnut Creek Cor. Gazette, March 15: A. Hemme is adding to his already extensive orchards 4000 prunes, 2000 apricots and 1500 peaches. S. H. Long is putting out on lands purchased of Hemme, 250 cherries, 250 apricots and 250 peaches. J. D. Smith has disposed of his interest in the B. I. Linger ranch near Alamo to A. T. Hatch, and is planting 160 acres of fruit trees on contract for Hatch. There will be 2000 cherry, 1000 French prune, 5000 peach and 4000 almond trees. The trees are put 25 feet apart, and upon 31 acres they have planted three rows of almonds and peaches for nursery in each space between the trees. The young orchards in the San Ramon valley have made an extraordinary growth and look healthy.

El Dorado.

FROM TREES TO VINES.—Coloma Cor. Mountain Democrat: The Rasmussen brothers, of Lotus, have been busily engaged the past week setting out in the neighborhood of a thousand grape cuttings of the Flame Tokay variety. The land upon which they have set these out was for merly an apple orchard, but it had got so old that it was past bearing; so they took out the trees, plowed up the ground, and now have it in the above variety of grapes. They say they will do the balance of the orchard in the same way, and will, by next year at this time, have five or six thousand more vines.

Fresno.

EDITORS PRESS:—It is just impossible to delay offering our mite to your columns any longer, our silence being continually repaid with unstinted measures of good things in the RURAL and a remonstrance from our conscience can no longer suffice. But we also miss many familiar friends of the RURAL, and their welcome signatures appear not so frequently. Perhaps they too have become seemingly indifferent. But arouse ye, good contributors, and treat us with an account of your absence and the good news of your locality. Our best word is the glorious rain that insures a good crop of the late-sown grain, and bids fair to be a prosperous year. The fruit and grape interests are also promising well, as the orchardists are controlling the insect pests satisfactorily. General good health and prosperity is the reward of our watchfulness, and the well-filled RURAL affords the knowledge we seek.—MRS. A. L. A., Temperance.

BIG BUTCHERY OF BUNNIES.—C. A. P. dispatch, Fresno, March 26: The grand rabbit-drive at the New England colony was participated in by 4000 people. The drive extended over an area of five square miles, and nearly 20,000 rabbits were corralled before the slaughter commenced. A thousand live rabbits were caught for use at the coursing match at Merced. Then the crowd killed with clubs between 12,000 and 14,000. The balance escaped through the line of beaters. At the other drive held over the same ground 3000 were killed. About 10,000 were shipped to-day to parties in S. F. Kern.

EDITORS PRESS:—We think we have a fine outlook in the near future. People are coming in to settle. Circumstances which have retarded the growth of Kern county are changing; improvements are being made at Bakersfield and Sumner, our railroad station. The new hotel will soon be under way, and a dummy road is likely to be constructed from a point near the courthouse to the promised new depot in Sumner. The movement of both towns is southward; there is no reason why they should not come together; their interests should be in harmony. Sumner is a dry town, having at present no facilities for irrigation. There is a feasible survey for a ditch taking water out of Kern river above all present systems. This enterprise only waits for capital and push to develop a fertile tract of many acres and add much in beauty and comfort to the burg. The new line on the east side comes here for terminal facilities, and insures the per-

manency of the roundhouse and shops which it has been thought would be removed to Tulare. We do not anticipate a boom, but hope for a natural and healthy growth.—W., Bakersfield, March 23d.

Lassen.

MADRELINE PLAINS.—Susanville Mail, March 21: J. A. Smith, residing at Little Tule lake, near Madeline Plains, has been in Susanville for a few days. He owns 780 acres of land, 100 acres of which is cultivated, the remaining portion being used as pasture land for horses and cattle. On this ranch are raised all kinds of vegetables, fruits, grain, etc. Mr. Smith's ranch is nearly 200 feet higher than Madeline. He raises 50 bushels of barley to the acre and an average of three tons of potatoes to the acre.

Mendocino.

EDITORS PRESS:—Everything is growing nicely here in our valley, but the hops are catching it this spring; farmers are plowing up a great many, as they have not paid the past few years.... I wrote you some months ago that I did not believe there was any Government land in Mendocino county that a man could take up and make a good living on. I may have been a little mistaken in that, at least one would think so to look in our town paper and see how land is being taken up on timber claims; but a man cannot make a living on a timber claim, and those who have taken such claims have done so in order to sell them again. I still say, if there is any land to take up that a man could make a living on, I do not know where it is.... Our town and valley are improving very fast. We have quite a number of new houses to be put up as soon as they can get material to build with, and we have another great enterprise going on in the valley. There is a man here with a machine boring artesian wells. Mr. McClure has one only 134 feet deep. I am told it is nice and cold. I understand they are boring one for Mr. Howell. Now, if we get plenty of water in this valley, we can have one of the best in the State in proportion to the size of it. It is true, we can raise good crops here without irrigation, but we cannot raise garden vegetables without water and we cannot raise alfalfa so well.... My time for the RURAL is nearly out, so I will send you the money in this. I don't want ever to miss a number.—J. F. TODD, Ukiah, March 19th.

STALLION EXHIBIT.—At the horse-show last Saturday afternoon, on the Ukiah Park Association grounds, there were a number of good stallions—Starlight and Revenue representing the Norman blood, and Copperhead, Tommy T., Mendocino Chief, Gen. McClellan and Sampson the trotting and running blood.

Modoc.

ARTESIAN WELLS.—Modoc Independent: On Friday of last week two six-horse teams from Cedarville passed through Alturas en route for Big valley after the well-boring machine which was recently purchased by a joint stock company in Surprise valley. Mr. Johnstone of Cedarville informs us that the company is composed of the solid men of Cedarville and vicinity, and among the stockholders are such men as Wm. Hudspeth, Jake Bitner, C. T. Sharp, Smalls Bros. and others, and it is the intention of the company to continue boring until the matter of obtaining artesian water in Surprise valley is fully determined. The machine which has been at work in Surprise valley was inadequate to the purpose, notwithstanding the fact that flowing water was obtained at a depth of 150 feet. The well referred to is on Smalls Bros.' ranch, half a mile east of Cedarville. It flows only a small stream, but it is the general belief that by going deeper a good supply of water can be obtained, hence the purchase of improved machinery.

Nevada.

O'BRIEN'S NEW DITCH.—Nevada City Transcript, March 22: James O'Brien was in town yesterday, ordering lumber for his new irrigating ditch between Dry creek and Bear river. Work on this system has been in progress for a year, and within the next 30 days it will be completed. It follows the line of the old Camp Far West mining ditch for some distance. The right begins on Wolf creek about six miles southwest of Grass Valley. The water is carried down the creek six miles, then taken by ditch and flume due west a distance of 20 miles, counting the bends and turns, through the magnificent six-mile belt of farming and fruit lands lying between Bear river and Dry creek. The lower end of the ditch is two miles north of McCourtney's crossing on Bear river.... Work on Mr. O'Brien's other irrigating ditch, leading into Yuba county, is progressing satisfactorily, and he will by next May have the water down to his ranch if no accident occurs.

Placer.

HORTICULTURAL ACTIVITY.—Newcastle News, March 21: A. T. Hatch, who has already 2000 acres of fruit trees in various tracts, Washington Porter, of the well-known firm of Porter Bros., and J. K. Armsby of Chicago, have each purchased large tracts between here and Rocklin from J. P. Whitney, and will put out 30 acres this spring in oranges exclusively. These orange groves are intended to be models, and will be put out under the personal supervision of Mr. Hatch.... Wm. Shillingsburg of Gold Hill has now between 40 and 50 acres in olive trees, and intends putting in many more. He has just constructed a large hothouse, where he is propagating thousands of plants. He has also put in a large area of strawberries, and in doing so has adopted the system of

under-drainage and sub-irrigation, as practiced with such satisfactory results in the State of New York.

IRRIGATION.—F. Birdsall, the proprietor of Placer county's already extensive irrigation system, will begin next week the construction of a canal at the head of Clover valley down Clover Valley Hill to Rocklin, and some distance below. Besides this, J. P. Whitney and P. W. Butler will commence building a reservoir for the storage of water, of 7,000,000 to 10,000,000 gallons capacity, on Douglass Hill, one mile east of Penryn and two miles west of Newcastle. Mr. Whitney is also engaged with teams and a force of 30 to 40 men in building a large water reservoir on his estate above his magnificent raisin vineyard which will have a capacity of 30,000,000 to 40,000,000 gallons.... The iron pipe to be used on the new branch of the Bear River ditch that is to carry water from Geo. Threlkel's down by the Sherman and Hector tracts, is arriving at Newcastle and is being hauled to the locality where needed. There will be 9000 feet of pipe used on this ditch. In a word, the foothills of Placer county are being fairly gridironed with irrigation ditches, so that in a very short time the whole arable area of our immense fruit district will be "under the ditch."

"PLACER CO. FRUIT ASSOCIATION" is a success so far as selling stock is concerned. Over \$15,000 worth of stock already taken, says the Herald, and more wanted.

San Diego.

EDITORS PRESS:—The weather now is all the farmer and fruit-raiser could wish, the late copious rains having insured one of the best crops of grain and fruit that San Diego has raised for many years. In this section we have had 14 inches of rain and in gentle showers—no hard wind either during the storm or since, and the absence of hot sun has left the water thus bountifully showered upon us to do its good work. The barley is a dark green, rank and tall; some of the earliest sown will go down if nothing unforeseen checks its rapid growth. A much larger acreage has been put in than last year; new farms are being opened on all sides; fruit trees and vines are being planted; settlers coming in and houses springing up in a day, where but a few suns ago the festive jackrabbit ruled the roost. One cannot help liking California now, especially San Diego county.—A. W. OSBURN, Sweetwater, March 21st.

San Luis Obispo.

ESTRELLA NOTES.—Cor. San Luis Obispo Tribune, March 23: Grass and grain grow very fast. Crops look very promising, fruit trees are all in full bloom and look beautiful.... There are quite a number of fine draft horses raised on the Plains. Among the number is Mr. Reynolds' strawberry roan, three years old this spring, weight 1400 pounds or more; F. M. Stovall's coal black, four years old, weight 1450; T. A. Rude's four year old, weight 1400, dark brown. These horses are all of good action and fine appearance.

OATS AND BARLEY.—Tribune: Levi Smith brought to our office this week from his ranch on the Osos, a bundle of barley four feet high and heading out splendidly which was sown 12 November. He brought in also samples of wild oats of about the same length.

Santa Clara.

FLORAL FAIR.—San Jose Times, March 25: The Ludica Conservatory of Music Association held a meeting yesterday to further the interests of the coming floral fair. Mrs. T. Kirk presided, with Miss Percy Harris, secretary. It was decided, if the condition of the flowers will permit, to give the fair the first week in May, possibly beginning on May Day. Among the ladies who have agreed to take special charge of a table and contribute some special floral designs were the following named: Mesdames Snow, McBride, Gay, Watkins, Abels, Ayer, Combs, Miles, Baker, Martin, Aram, Conant, Misses May Mabury, Heinlen, Nelson, Detreich, Gessie and Rosalie Younger, Iskip and others. For evergreen, Mrs. T. O. Smith and Miss Mattie Fowler were named, and Miss Farwell to represent Saratoga. It is the desire to have Santa Clara, Los Gatos, Gilroy and Mountain View also represented.

Solano.

WHITE LABORERS COME.—Vacaville Reporter, March 15: Monday there arrived here 26 men from Mercer, Penn., who come to secure work, principally in fruit orchards, and we are glad to say that all of them have secured good places. The party is composed of young men well dressed, well behaved, well recommended—a sterling lot of fellows, sober and upright, and we hope they will become part and parcel of our permanent population. There are others where they came from, ready to follow in their footsteps, if, after spying out the land, they think it advisable to say "come." D. B. Derby has been indefatigable in the work of getting these men here, and deserves great praise for it.

Sonoma.

ENGLISH SPARROWS COMPLAINED OF.—Petrolina Courier: A gentleman living near this city says the English sparrows are destroying all the buds and flowers on his plum trees. He has watched them, and they don't appear to eat the flower or buds, but cut and pick them off either for the pleasure of seeing them fall to the ground or for "pure cussedness." Last year these pests destroyed all his plums while in flower, and they are doing the same this

season. They have multiplied so rapidly that he thinks there are at least 1000 getting their living around his house and barn. Only a few years since there were but 16 English sparrows in this city. The writer and others encountered them frequently. Now it is believed that a million would not be near the mark. They are everywhere and are doing much damage; they are quarrelsome little rascals and will not live in peace with any other species of the feathered family. They promise in the near future to be a curse to this country, and every means possible should be used for their extermination.

STOCK AND DAIRY.—Santa Rosa Democrat, March 24: The stock outlook in the western part of the county, according to many and confirmatory reports, is not as propitious as could be wished for. The recent heavy rain and hard storm resulted in considerable damage, both to feed and to newly plowed hillside soil, the latter being washed by the ton down into the valleys and ravines. The growth of the feed was greatly retarded, and at the utmost, there only being about seven weeks more of feed growing weather, the outlook for stock-raisers and dairymen is not altogether encouraging. One of the leading dairymen of the county said the other day that from the milk of 68 cows he was manufacturing only three boxes, or about 300 pounds of butter a week. From that number of cows he has generally averaged a little over 600 pounds per week. His neighbor, he states, is milking 125 cows and makes less than five boxes a week. The past year has been unfavorable for stock-raisers, and the profits derived from the business were not such as to greatly enrich those engaged therein. Feed has been scarce and many valuable cattle have died. It has not been a losing game, however, is asserted by some who are in a position to know that the high prices of dairy products have been sufficiently compensatory.

Stanislaus.

CROP OUTLOOK.—Modesto News, March 23: Reliable reports from all parts of the county state that the crop prospects, except in light, sandy places, where the grain has blown out, are excellent. The sandy section between the Tuolumne and the San Joaquin rivers, west of the railroad track, is the worst sufferer.

Sutter.

GRAIN PROMISING.—Farmer, March 23: Senator A. L. Chandler of South Sutter was in town last Tuesday and graced our sanctum with his presence. He reports crop prospects very good in his section and on the way hither. Wheat on fallow is large and thrifty everywhere, and later sown, though backward, is looking well and giving promise for a good yield.

SUTTER HORTICULTURAL SOCIETY.—Appeal, March 23: The attendance at the meeting of the Horticultural Society yesterday was not large, but the meeting was enthusiastic, and much valuable information on fruit culture was disseminated. Several new names have been added to the roll. The society decided to petition the State Board of Horticulture to hold their fall meeting and Fruit-Growers' Convention at Marysville. The discussion was confined to pruning the grapevine, and was participated in by all the members present.

Tulare.

RABBIT DRIVES.—Visalia Times, March 22: In the rabbit-drive south of the Bliss lane on Sunday last, 1893 rabbits were corralled. More than 1000, it is estimated, were killed before reaching the corral. Three hundred people were present. The drive at the Eaton ranch, under the management of Richard Chatten and others, was attended by from 1500 to 2000 men, women and children. For days previous to the drive every available team in this city had been engaged for the occasion. The drive was not so successful as was expected, only 1047 rabbits being corralled, though it is estimated that 400 or 500 were killed before reaching the corral.... A drive is announced for Sunday next at the Cottonwoods, 2½ miles west of the ranch of D. V. Robinson.

TWO MILES OF WHEAT.—A beautiful sight in the vicinity of Goshen, these days, is the 1200-acre wheat-field of S. Z. Curtis, which attracts the attention of all passers-by. The grain is about 12 inches high and its dark green color is evidence of its thrifty condition. The Times remembers when all that country was considered a worthless alkali tract; but the enterprise of Mr. Curtis has demonstrated that as a grain-producing section it cannot be excelled. He purchased the land in 1878, the consideration being \$10 an acre. He farmed it that season, and after paying for the land out of the proceeds of the crop had \$5000 and enough seed wheat for two seasons left.

Yuba.

MARYSVILLE DOTS.—Appeal, March 24: Several wagon-loads of willow four-foot wood are daily hauled into town from the bottom lands south of the city.... William Klein is setting out a few orange trees around his property on F street, between Fourth and Fifth.... The 20-acre orchard in the Bance tract, set out by Messrs. Cutts, Terstegge, Swain and Elder, in peach, almond and cherry trees, gives promise of a rapid growth. The ground and the young trees are receiving the best of attention.... Coyote scalps are received every few days at the court-house, and the demand made on the treasurer for the reward. Some foothill men seem to have gone into coyote killing as a business.

ALILA!

The Arcadia

—OF THE—

SAN JOAQUIN VALLEY!

THERE DOES NOT EXIST IN THIS VAST extent of country a section so manifestly destined for the site of

A PROSPEROUS TOWN,

Supported by the demands of a rapidly and steadily increasing population, as Alila, THE ENCOURAGING NUCLEUS is already there, for Alila now possesses a well-conducted and

LIBERALLY FURNISHED HOTEL,

Several well appointed stores, and, in addition to these, that most important feature and best evidence of progress, a

Handsome and Spacious Schoolhouse,

Which stands nearly, if not precisely, in the center of the town-site. Alila is envied by

A MOST FERTILE COUNTRY,

A soil of surpassing richness, with the capacity of sustaining, in comfort and prosperity,

Thousands of Industrious Settlers.

The resources of this land are illimitable. At this season, in the surroundings of Alila, the plow is busy in every direction.

MILES OF GRAIN,

Soon to wave in luxuriant beauty above the sod now decked with wild flowers, will be a most substantial ornament to

ITS BROAD ACRES.

This scene of agricultural activity and brisk and intelligent cultivation is

A GRAND ASSURANCE

Of what the future must bring forth. The Southern Pacific Railroad

PASSES THROUGH ALILA,

And the stations and sidings there are about the best on the line.

ALILA

Is in Tulare County, 22 miles south of the city of Tulare, on the main line of the Southern Pacific Railroad.

Bovee, Toy & Co.,

19 MONTGOMERY ST.,

Are now offering a limited number of lots at private sale in ALILA, and intending purchasers should not delay in making their selections, as a

SERIES OF IMPROVEMENTS

Have already been inaugurated, consisting of grading streets, planting them with shade trees, increasing the irrigating facilities, and shipping material for the

ERECTION OF BRICK STORES

Upon the main street of Alila. This is a

Superb Opportunity for Investment,

Because the time is close at hand when

Wave after Wave of Eastern Immigration

Will fill up the great San Joaquin Valley, and every dollar placed in real property there will yield a four-fold return.

There are a few facts in connection with this property to which we desire to call particular attention:

First, the extreme richness of the soil has attracted a superior class of population, who are farming the land in an intelligent and progressive manner.

Every section in the vicinity of Alila and for miles around contains from two to four houses, presenting a prosperous and comparatively well-settled country, owing to the fact that the land is held in small holdings, and not in those immense tracts of single ownership which characterize other portions of the valley.

There is no other locality so well adapted for successful fruit and raisin culture.

Again, Alila lies in the direct line of Walker's Pass, the lowest point in the Sierras through which other overland roads coming into the valley will in all probability lead.

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land? DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost? DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10 acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

THE VETERINARIAN.

Black-Leg.

A reader of the RURAL writes asking that information concerning black-leg and the treatment for it be given in our columns. We have previously stated the general belief concerning the cause of the disease and remedies for it, but in case a restatement may be of use to some, we repeat that black-leg or black-quarter is often the result of a sudden transition from a poor to a rich food. In the cases of calves, for instance, if the owner will provide oilcake meal, and administer it from the earliest period that they begin to feed, and thus keep them always in condition, there will generally be no black-quarter. If this cannot be provided, niter will act as a preventive; one drachm or two-drachm doses may be given, according to the age of the animal. Again, hyposulphite of soda may be used with advantage. But the great thing used in a hot climate is salicylic acid, 20 grains daily, given either in the food or dissolved in the water. Another remedy which is extremely useful is the seton. This plethoric condition is due to the fact that the blood is rich in nutritive constituents, and if a seton is put in the dewlap there will be a discharge of matter. That discharge of matter lessens the nutritive condition of the blood, which produces plethoria, and therefore prevents black-quarter and splenic apoplexy. When the tape is passed by means of a packing-needle through the dewlap, the custom is to tie the ends together and move it occasionally. It is better to tie knots in both ends and avoid the risk of a ring of string, which might catch and be torn out.

The same theory of the disease, but a different remedy, is given in the following letter on the subject from S. Woodrum, Jr., a stock-raiser of Wilkins county, Minnesota, in a work on "Contagious Diseases in Domesticated Animals," lately issued by the Department of Agriculture at Washington. "The cause of this disease, I am convinced by experience and observation, is overfeeding. For instance, cows that were milked all winter, and were fed eight quarts per day of cornmeal, linseed meal, oatmeal and wheat bran, went through the winter without getting sick, but cows that came to the barn fat and dry, and were not fed anything but hay until after dropping their calf, when they were put on the same feed as those who were milked all winter, were taken sick in every instance. Again, cows that came to the barn fat and dry, and received a daily ration of feed of the same quality as the other cows, but after dropping, and then increased in quantity to the same amount as the others, got through without being sick. My experience has been about the same with calves as it has been with cows. A calf that has been allowed to run with its dam all summer, being very fat, was turned into a field where grain had been harvested, and a very luxuriant growth of grain had sprung up, and it was soon taken sick. When Dr. Hearn of the Signal Service was here, some seven or eight years ago, I described the post-mortem appearance of an animal that had died of black-leg. He advised me to try drenching with strong salt brine, and I am happy to say that I accepted his advice, and have not since lost a cow or a calf. Put one-half pint of salt into a quart-bottle, fill with water, shake well and give about half as the first dose; in about an hour give the remainder, and one hour later repeat. The following day the operation should be repeated. I have used this remedy in the case of sick horses with satisfactory results."

The report of the Bureau of Animal Industry for 1884 also contains the following in the report of J. H. Fullinwider of Arkansas, one of the Inspectors of the Bureau:

It is quite astonishing to observe the general extent of this disease among the young cattle of the Northern United States. Reports from all the States and Territories have not been received, but Minnesota, Montana, Kansas, Nebraska, Idaho and Dakota have all reported it as existing among the young cattle of their respective localities. All concur in the statement that the loss upon individual owners is small, and yet when the general prevalence of this disease is taken into consideration, the total is no small matter. It attacks young cattle almost exclusively, and frequently has advanced so far before its presence is discovered as to be beyond successful treatment. It is claimed by a large number of our correspondents that by giving plenty of salt, saltpeter and sulphur to animals suffering with black-leg, from 25 to 30 per cent can be saved. Among the remedies used for the treatment of this disease, the use of salt, saltpeter and copperas has been found beneficial, as has also a mixture of salt and air-slacked lime. Others recommend salt and saltpeter without either sulphur or copperas. A mixture of pitch-tar and lard will be found beneficial in many cases. Roweling is a method resorted to by many, and the vaccination of young stock is followed to some extent. I think I am justified in saying that the timely use of salt, saltpeter and sulphur is the most effectual mode of treating this disease at present known to our stockmen.

ANTI-TOBACCO.—The Santa Cruz city council has just passed an ordinance prohibiting the use of tobacco in any form by any person under 18 years of age. The penalty is a fine not exceeding \$50 or 20 days in jail.

"Bamboo" or Arundinaceæ Fence-Making.

EDITORS PRESS:—The fences of the United States are valued at \$4,500,000,000, a sum greater than the cost of all the buildings in all of the towns and cities. A good fence is a permanent improvement. The question is, which is the cheapest and best fence? Farmers are beginning to learn that to build the ordinary rail or plank fence requires ten-fold as much material as is required to build the woven wire picket fence, which is equally serviceable, durable, and far more ornamental than any other practicable farm fence; it is not dangerous like barb wire. Many an animal has been injured with the barb-wire fence that with the wire-picket fence would have been uninjured. And here I must tell a little story: A friend of

ARUNDINACEÆ FOR FENCING.

mine engaged in stock-raising, who reads the RURAL PRESS, bought two of the machines advertised in its columns, and procured a carload of laths and set about fencing his place according to the latest improved methods. As the beautiful lines of fence were extended 40 rods or more per day by each machine, run by two men, costing less than half what any other good fence would cost, he was, indeed, proud, as well he might be. But his joy was of short duration. His stock left all other kinds of feed and gave their whole time to eating up the laths composing the fence. He looked at them

the eating up of the lath fence above narrated. I send you an average sized cane for inspection of callers who read the RURAL
Sanders, Cal. W. A. SANDERS.

Watermelons.

The subject of varieties of watermelons best suited to this coast should be discussed by our growers. Novelties are frequently brought out in this as in other fruits, and they are sometimes good, sometimes not. We give on this

MAMMOTH IRONCLAD WATERMELON.

more in astonishment than anger. Finally he got off of his horse and thought he, too, would try the edible qualities of one of his laths. It was of a delicious saltiness. The explanation was simple: The laths were made from logs that were rafted in the salt water of Puget sound, and had become saturated with salt. Whether by giving his stock an extra amount of salt he can save the balance of his fence or not, remains to be seen. Had he used (instead of laths) pickets made from arundinaceæ canes, as shown in the picture, he would have escaped losing his fence, and the scarcely less annoyance of having his fence imperfect from knotty or cross-grained laths. I claim that this is the only plant of the bamboo, or of any allied species, that has proven of any value in California. The canes grow in dense forests to the height of 30 feet, with the diameter of from three-fourths of an inch to two inches, and are coated with such a hard coating of silic that not even a jack-rabbit will attempt to gnaw them. I estimate that an acre will produce enough four-foot pickets yearly to make six miles of fence. The fence is as easily made as

page an engraving of the Mammoth Ironclad watermelon introduced in 1884 by W. Atlee Burpee, the well-known seedsman of Philadelphia. In 1885 it won their prize for the largest melon, with a specimen weighing 110 pounds 7 ounces, grown in Georgia. It has no doubt been tried before this in California, and we would like to hear the decision of growers upon it.

DECAY IN TEETH.—Russian observations have shown that teeth decay in a quite regular order, the lower third molar being the first attacked, then the upper, then the lower fourth molar, and so on, the lower incisors and canine teeth being the last affected. Upper teeth as a rule are more durable than lower, right than left, those of dark persons than those of blondes, those of short persons than those of tall.

"STRAP" OR BELT.—In the nomenclature of mechanics nothing strikes an American mechanic as being more odd than the English use of the word "strap" for what we call a belt.

AGRICULTURAL SCIENCE.

The Amador Experiment Station.

As our readers in different parts of the State are considering the establishment of Experiment Stations to be carried on by the College of Agriculture of the University of California, no doubt the following account of what the people of Amador are doing in providing for this work will be of interest. We condense the facts from the Jackson Sentinel of March 21:

On last Friday E. W. Hilgard, Professor of Agriculture of the University of California, came up to Jackson in company with Senator Caminetti and remained until Monday morning. Sunday night he stated that the Board of Regents had definitely decided to accept the offer of Jackson and had located the Agricultural Experimental Station four miles east of town on what is known as the Harwood place, now owned by Senator Boggs of Colusa county, taking in, however, small pieces of land belonging to D. McKay and G. Oneta, the donation of all of which has been promised. Jackson's offer is as follows: To donate the required amount of land (20 acres or more) to fence, clear and plow it, provide water, erect the necessary buildings and to turn over the station completely equipped to the University. The land selected contains three distinct soils—the slate, granite and gravel—thus making it representative of the foothill section extending from Fresno to Tehama. The Amador Canal Co. has guaranteed free water, and as the land lies above the canal it will be necessary to put in a wheel for the purpose of furnishing power to raise the water into a storage reservoir. The elevation of the station will be about 1900 feet, and from the observatory which will be placed on top of the building the entire valley portion of the State can be seen, which fact is of importance, as the station will also be a U. S. Signal Service one. This land is absolutely free from local weather

influences, having no contiguous gulches or canyons through which a cold blast could come shivering down the backs of the tender nurslings. These facts induced the choice of this location in preference to a large number of others that were offered.

The desirability of the selection of Amador county cannot be questioned. It is centrally located so far as the section it is taken as representative of is concerned, is easy of access, and what it has already produced shows the great possibilities of the future. Prof. Hilgard was enthusiastic in praise of our wines and dried fruits, and by way of parenthesis, his judgment is that our land is best suited for grapes that will make port and sherry wines. He could hardly believe that our native wines were not fortified.

The prime mover in the effort to secure for our county this desirable adjunct to its prosperity is Senator Caminetti, and it is not at all probable without his energetic and persistent pushing of our interests in this regard that success could have been achieved. He is therefore entitled to the earnest thanks of the people of the county.

At one time it was feared that the distance of a few miles from a railroad would have interfered, but this objection was not raised at the Board. Had it been, however, Regent Crocker had promised that he "would settle that objection," and in conversation that gentleman remarked that this agricultural station business would prove a most important aid to secure the extension of the railroad from Ione.

The work of preparing the ground will be commenced at once, and a number of vines and cuttings are already here, which have been put in the nursery at the French gardens.

"EVERYTHING FOR THE GARDEN."—Peter Henderson & Co. of 35 Cortlandt street, New York, have sent us their manual for 1888, which is quite a remarkable pamphlet in its line. It contains 140 quarto pages, profusely illustrated, describing the vegetables, grasses, flowers, etc., whose tested seeds they have to sell, plants, books and implements, and brilliant full-page chromos of their "Green & Gold" watermelon, "Mammoth" verbena, "Zebra" zinnias and "Imperial" chrysanthemums. The covers, too, are handsomely pictured. As the catalogue is costly to the publishers, persons sending for it must inclose 25 cents—unless they are customers.

SHEEP LICENSE IN PLUMAS.—The supervisors of Plumas county on the 8th instant passed an ordinance fixing a license tax on sheep kept or pastured in the county, similar in its provisions to that recently adopted in Lassen county (of which the substance was given in the RURAL PRESS of March 10th, page 202), except that the rates are generally 150 per cent higher—\$250, for instance, being the amount of the license tax on the first 5000 sheep, and \$50 for each additional thousand—and that no license is issued for less than \$12 50 per annum.

NEGRO LABORERS are none too plenty in South Carolina, and agents who would induce them to leave that State for California have met with opposition on the part of the planters,

HORTICULTURE.

What to Plant.

Following is the essay by J. J. Pratt, superintendent of the cannery, read at the meeting of the Sutter County Horticultural Society, March 14th:

This, Mr. President, is a subject that is foremost in the mind of the writer at all times. Our people are planting trees for the gain therefrom, and not merely to ornament their places and enable them to sell out to boomers. We are here to stay, and wish to reap the fruit from the trees we plant. Then what shall the harvest be? According to the kind planted, so shall be the fruit thereof. If we plant Early Crawford we must expect to gather Early Crawford, and if buyers do not want Early Crawford, we might as well cultivate willows or some ornamental trees.

Mr. President, I do not presume by my own individuality that I am to say what to plant to a class of people who have spent years in the study of horticulture, and most of whom are now constant students of the subject; but it is from the fact that for the past four years the writer has been at that end of the fruit business where the final results are obtained. Have marked the principal varieties of stone fruits in most of the large cities of the United States, and have heard the results both pro and con, and if what has been learned is of value to any one the writer is glad to impart it.

The staple varieties of fruit are four in number: Peaches, pears, apricots and plums. Other varieties, such as cherries, nectarines, etc., and all small fruits have only a limited demand, and that particularly in home markets. Of the staple varieties four years ago the demand for apricots was estimated as seven times greater than that for peaches, then the next in demand; but each succeeding year has brought the demand for California peaches nearer that of apricots, not that the call for apricots is getting less, but that the peach is growing in favor each year, and this season that splendid fruit not only gained the front rank, but passed the demand for apricots.

The peach seems to be the one particularly adapted to our locality. The writer has made repeated tests and examinations of the canned fruits of other parts of the State, and finds that while we are able to produce a No. 1 article of pears, apricots and plums, there are other sections that produce equally good. In Alameda county the Moorpark apricot matures to perfection, but it is fully a month later in ripening than it is in our locality, which brings it in with peaches and pears, and makes them difficult to handle. But we have a specialty—one that we can and do excel in. Nowhere in the world can the peach be grown to such perfection as here. Why, in talking to men interested in canning fruit, and telling them of the Sutter Canning Co. having one, two or three thousand cases or more of just such fruit as they had sampled, they seemed to disbelieve it and would possibly remark that a cannery might assort out a few hundred cases in a season's run, but when it comes to thousands of cases they could not see how they could all be so nice. And when such buyers would buy a quantity of our peaches they would not expect to get fruit equal to the samples. And on arrival of the shipment they would likely select a bottom box and take the last can in the case, and on opening find it the same as the sample. These results have not only given dealers in canned fruit confidence in the products of the Sutter Canning & Packing Company, especially these peaches, but it has attracted the attention of our competitors, even to the extent that the most noted canneries in the State for extra fruit—J. M. Dawson Packing Co. and the Golden Gate of San Jose—have come to our locality to build a cannery and pack their extras. While we will perhaps not lose much by these people labeling their fruit San Jose, Santa Clara county will gain a great deal which naturally belongs to us. The above facts are conclusive, to my mind, that we have the best section in the State for fruit and a specialty in the peach.

Now the question is, what is the best peach to plant? First, peaches are divided into four general classes: White Free, White Cling, Yellow Free and Yellow Cling. The White Free is of no account for any purpose. Some of the White Cling, especially the White Heath, are very nice, and a good many fruit-growers are planting them, but they make a mistake, for white peaches are very hard to sell. Yellow peaches, that are not half so large and fine, outsell them two to one. The Yellow Free has always been considered the best until canners overcome the difficulty of handling the cling. There is quite a list of yellow freestone peaches, each having some particular advantage over another. To speak of them separately would consume more time than is possible to spare at present. The Muir seems to have more excellences combined than any other freestone, but even that could not be distinguished by an untrained eye from some other leading varieties when canned, such as the Foster, Susquehanna, Picquet's Late, etc. But of all peaches, and of all fruits, there is nothing to equal the Yellow Cling. It sells on the market where nothing else will, and always brings the best price; will bear more handling and will stand longer when ripe. When they are canned they retain their shape

and color. The syrup always looks clear. In fact, they possess all the excellences, and it seems strange that planters will continue to plant freestones. Of the Yellow Cling there are also many excellent varieties, each having some peculiarity that makes it better than any other. Under this head come the Tuscan, the Orange (several kinds), Crawford Cling, Lemon Cling (the large kind, the regular Lemon Cling being too small), the California Cling and others.

How to Eat an Orange.

J. D. Mitchell, in a late number of the *Florida Dispatch*, gives his views on the proper way to eat an orange. In the first place, he thinks, the peel should never be removed. "Why did the Creator take the trouble to place in the rind of the orange that exquisitely pungent oil that is by odds the most emphatic flavor—the accent, as it were—of this peculiar fruit, if it was His intention to have it peeled off and thrown away?" His simple process is as follows: Cut the orange into eighths, longitudinally. Take the ends of a section between the thumb and forefinger of each hand, pulp side toward you; then with teeth and lips go for the juice with such skill and dispatch as you can muster for the contest. You cannot get the juice of the pulp without getting also just enough of that of the rind to give you revised and enlarged views of the Divine conception when the orange was created.

And now I suppose I may as well die for a full grown sheep as a lamb; so in spite of the *anathema maranatha* that I know I shall deserve (and get), I am going to confess that if there is one thing more than another that I love and cherish, it is to "suck an orange." But then to be "too glorious for anything" it must be gone at right end foremost. With a long, narrow knife-blade cut a core exactly three-eighths of an inch in diameter from the blossom end, deep enough to cut all the partitions without making a hole in the stem end. Subsequent proceedings I leave to your imagination. No further instruction is needed by the dullest pupil. The conclusion of the whole matter is, that without the flavor of the oil in the rind the essential glory of this incomparable fruit is altogether missed.

PERSONAL.—We are pleased to see the announcement that H. G. Tinsley has purchased a half interest in the *Pomona Progress*, published in Pomona, Los Angeles county, and will have general editorial charge of the paper. We have known Mr. Tinsley for years and knew of his work in our old home in Western New York, where he was connected with the *Lyons Republican*, which was considered to be one of the best local papers in the Empire State. We expect that Mr. Tinsley's work will prove very acceptable to the thriving and prosperous community in which he casts his lot.

"Nasal Voices, Catarrh and False Teeth."

A prominent English woman says the American women all have high, shrill, nasal voices and false teeth.

Americans don't like the constant twitting they get about this nasal twang, and yet it is a fact caused by our dry stimulating atmosphere, and the universal presence of catarrhal difficulties.

But why should so many of our women have false teeth?

That is more of a poser to the English. It is quite impossible to account for it except on the theory of deranged stomach action, caused by imprudence in eating and by want of regular exercise. Both conditions are unnatural.

Catarrh troubles everywhere prevail and end in cough and consumption, which are promoted by mal-nutrition induced by deranged stomach action. The condition is a modern one, one unknown to our ancestors who prevented the catarrh, cold, cough and consumption by abundant and regular use of what is now known as Warner's Log Cabin Cough and Consumption Remedy and Log Cabin Sarsaparilla, two old-fashioned standard remedies handed down from our ancestors, and now exclusively put forth under the strongest guarantees of purity and efficacy by the world-famed makers of Warner's safe cure. These two remedies plentifully used as the spring and summer seasons advance give a positive assurance of freedom, both from catarrh and those dreadful and neglected, inevitable consequences, pneumonia, lung troubles and consumption, which so generally and fatally prevail among our people.

Comrade Eli Fisher, of Salem, Henry Co., Iowa, served four years in the late war and contracted a disease called consumption by the doctors. He had frequent hemorrhages. After using Warner's Log Cabin Cough and Consumption Remedy, he says, under date of Jan. 19th, 1888: "I do not bleed at the lungs any more, my cough does not bother me, and I do not have any more smothering spells." Warner's Log Cabin Rose Cream cured his wife of catarrh, and she is "sound and well."

Of course we do not like to have our women called nose talkers and false teeth owners, but these conditions can be readily overcome in the manner indicated.

We have on our tables several numbers of the *PACIFIC RURAL PRESS*, published at San Francisco, California, containing interesting contributions from the ready pen of E. H. Schaffle, who years ago had charge of the extensive drug store of W. R. Kutzner & Co., in this place. For a number of years he has been engaged in horticulture at Murphys, Calaveras Co., Cal., but for the past several months has been traveling extensively throughout his adopted State, and, with eyes wide open, a ready pen and a loving interest in the development of the State, he has compressed much of interest in his short articles which are crowded with facts.—*Shamokin, Pa., Herald.*

WELLS, RICHARDSON & Co's

IMPROVED Butter Color.

EXCELS IN STRENGTH PURITY BRIGHTNESS

Always gives a bright natural color, never turns rancid. Will not color the Buttermilk. Used by thousands of the best Creameries and Dairies. THE SAN JOSE Orchard & Vineyard Cultivator.

The most complete and the easiest handled machine in existence. Made entirely of Iron and Steel, with the exception of the poles. Weight, 335 pounds. This is the only machine that can be handled on the sidehill. By means of the shifting pole and the adjustable teeth the machine works to perfection. These can be used to advantage on level ground also and the machine made to work fully a foot and one half nearer the trees.

All our machines are 7-tooth, 4-foot cut, but can be increased to 9-tooth, 5-foot cut by the addition of two extra arms, secured in a grooved casting, in the ends of the frame, by means of a set screw. This is an improvement not to be found in any other Cultivator, and Farmers having both Orchard and Vineyard will readily see its value, for when cultivating in the Vineyard the 7-tooth is as large as can be used, and when cultivating in the Orchard, by the addition of the two extra arms, the machine is increased to 9-tooth and an extra foot of work accomplished with the same amount of team and without undue strain or exertion.

On the 7-tooth machine the outside teeth extend 8 inches outside the wheels, and on the 9-tooth 16 inches. These Cultivators are perfectly balanced by means of a lifting seat.

All our Cultivators have the PATENT STEEL SHOVEL BACK. This is one of the greatest improvements on cultivating tools ever introduced. The Shovel Back Sleeve is fastened to the Standard by a bolt in the lower hole, while in the upper hole we use a hard wood pin, which in case the Shovels catch a root or strike an obstruction, it breaks off and lets the Shovel fly back, so as to pass over. Nothing is broken but the wooden pin, which can be replaced in a minute's time.

We have Agents for these machines in nearly every town in the Fruit-growing districts of the State. Every machine guaranteed to give satisfaction. Write to us for circulars and we will refer you to our nearest Agent.

SANTA CRUZ COUNTY.

Address, H. MEYRICK, Box 5, Santa Cruz, Cal.

Bidwell's Peaches.

On our first page may be seen engravings of two Florida peaches and allusions thereto. The following are the descriptions as given by the *Florida Dispatch*:

Bidwell's Early.—General appearance good, size medium, skin smooth, shape round, slightly oblong, with moderate suture and short, recurved point; color pale yellow washed with carmine, deepest round the stem; half cling, with small, short, thick seed, having a sharp, slightly curved point; flesh white, fine grain, melting and juicy; sweet, sprightly, with a slight noyau or bitter almond flavor; quality good. The flavor suggests the parent *peen-to*. It is a sweeter peach than the latter, and, although it has marked almond flavor, it is an agreeable noyau rather than the objectionable bitter so often present in the *peen-to*, until it reaches the point of perfect ripeness.

The two original trees, for there are two Bidwell's Early trees among the nine seedlings identical in every respect, are now but little over five years old; they measure five inches in diameter, are 13 feet high, with spread of about 15 feet. The trees each held at least four bushels of fruit this season. The first ripe Bidwell's Early were gathered on May 7th, the same day the first *peen-to* ripened in the adjoining orchard. On the 25th all the Bidwell's were ready for market. The young orchard of this variety, planted the spring of 1886, bore a few peaches last year.

Bidwell's Late.—One tree. At the time the foregoing descriptions were made (May 25th), the largest specimens of this variety were about half grown. It ripened its first peaches last year, July 5th, and is said to resemble the Bidwell's Early in everything save that it is not as highly colored. This tree has a different habit of growth from the Early, being an upright compact grower with round symmetrical head, quite different from the usual straggling habit of the peach.

In addition to the foregoing Mr. Mott states that a peculiarity of the peach is that it hangs a long time on the tree so that its season of gathering may be prolonged to twice that of ordinary peaches, and is a remarkably good shipper.

A SERIOUS LOSS.—We saw a sad sight last Saturday at the ranch of E. R. Thurber, one of the oldest and most highly esteemed fruit-growers in Pleasant's valley, Solano county. About nine o'clock the previous evening his large barn was seen to be ablaze, and before help could reach the doors all his horses were beyond escape. Nine horses, a large amount of barley and hay, valuable implements and most of the accumulation of years in the way of tools and appliances, were burned up. The real loss is large and the depression from such a catastrophe greater still. The neighbors showed their sympathy for Mr. Thurber and his family by their neighborly words and services, and we trust time will quickly wear away the sharpness of the experience.

FIVE YEARS AT ONTARIO.—The people of Ontario, San Bernardino county, have just had a grand celebration of the fifth anniversary of the inception of the colony enterprise and the founding of the College of Agriculture at that place. The growth of Ontario is another proof of the wisdom and success of the colony plan in the development of California. It was started with great promises and prophecies, but the verdict of the celebrants is that the realization in improvement and success is far greater than was foretold when the enterprise began. We are always glad to see enterprising efforts like that at Ontario succeed.

FREE TRADE IN WOOL.—A California wool-grower has said through the public press that he wants free trade in wool because wool brought a higher price in 1859 than it does now, whereupon a contemporary calls his attention to a recent publication of the Bureau of Statistics containing tables of prices for the period of 1855 up to 1886, where he will find that the prices of 1859 average fully 15 per cent higher all round than they do to-day. If the people who advocate free trade would throw away their free-trade primers and consult reliable statistics they will find that their leaders are demagogues of the first water, who pay no attention to facts.

A NEW ORANGE.—"Mediterranean Ruby" is the name given a variety of Florida orange, of which the *Riverside Press* has lately received specimens. They are spoken of as very fine in texture, juicy, and well flavored, with a thin rind. The variety is not a common one in Florida, and has not, to our knowledge, been seen before in California. Mr. Holt considers it very promising and purposes trying it to a small extent.

COLUSA HORTICULTURISTS.—At a meeting of the Colusa County Horticulturists, a committee composed of L. F. Moulton, R. A. Gray, A. M. Armstrong, J. B. deJarnett and F. W. Willis reported a group of strong resolutions, calling upon Congress to maintain the tariff on fruit and fruit products. The resolutions were unanimously adopted.

News in Brief.

SANTA CRUZ will build a new waterworks system. A fine drive will also be built along the river.

SAN RAFAEL is now lighted by electricity, and a petition has been presented asking for an electric road franchise.

AN immense amount of snow fell in Wyoming Saturday. Travel was interrupted, but the stockmen consider the snowfall as highly beneficial.

The trustees of the Lick free baths will endeavor to have the baths built as soon as possible. James Lick left \$150,000 to build these baths.

ANDERSON, Placer county, from a mining town is becoming the center of a wonderfully developed district, filled with orchards and vineyards.

The Oregon Agricultural College building near Corvallis will be completed May 1st, accepted by the Governor and turned over to the Board of Regents.

The gross exchanges of the country for the week ending March 24th were \$908,050,762, an increase of 5.9 per cent over the corresponding period of last year.

The floods in Germany and Austro-Hungary, it is estimated, cover 200 square miles of territory, and alarming rumors of the extent of the damage done are circulated.

The old British war-ship in which Mr. Darwin circumnavigated the world, and began those speculations which have revolutionized science, is now a Japanese training-ship.

SEVERAL buildings on Alcatraz island, San Francisco bay, were destroyed by fire this week. The loss is not over \$2000. None of the more valuable buildings caught fire.

STOCKTON held a mass meeting Saturday to institute measures to thoroughly advertise San Joaquin county. Irrigation, less area in wheat and small tracts devoted to fruit were urged.

The weather-crop bulletin from Washington says: The freezing weather in the Southern States has doubtless injured small grains, fruits and vegetables in the northern portion of the Gulf States.

A BILL has been favorably reported in the U. S. Senate appropriating the following sums for Pacific Coast quarantine stations: San Diego, \$55,500; San Francisco, \$103,000; Port Townsend, \$55,000.

The late Kaiser William left by will the greater portion of his fortune to the Crown Treasury or General fund, and the remainder will be divided between Empress Augusta, Emperor Frederick and the Duchess of Baden.

A BILL to amend the naturalization law so as to require would-be citizens to make oath that they are not polygamists, anarchists or communists has been introduced in the House by Representative Stewart of Georgia.

The New York Times estimates that the losses to the Government from redwood timber frauds and the operations of the surveyors' ring in California exceed those that were caused by the jobs of the Star Route conspirators.

The members of the Veterans' Home Association held a meeting on Saturday evening, at which W. J. Ruddick, George Walsh and W. H. Hart were chosen directors. Walsh will hold for two years and the others for one. The directors were chosen to fill vacancies.

AUBURN is rapidly changing from a mining town to the center of a wilderness of orchards and vineyards, and the change is brought about not by a decrease of mining, but by the development of the horticultural resources of the region which have so long lain unimproved.

JOSE JESUS VALENCIA, who was one of the founders of the city of San Jose, was run over and killed by a runaway team on Monday last. The deceased was well known all over the State, and at one time owned a great deal of real estate in the city when it was known as Yerba Buena. Valencia street was named after him.

VIRGINIA CITY is intensely excited over the concealment of cases of smallpox by a physician of that city. Seven cases have been hidden from the public. The physician stated that he was not positive of the character of the disease, and the convalescent children were permitted to associate with children of the neighborhood.

ONE of the Oakland ferry steamers is now lighted by electric lights, and the system is to be adopted on the other steamers. The Piedmont now has 140 electric lights of 20-candle power each. The relative cost of the light is said to be no greater for the 140 electric lights than was the expense of the 60 coal-oil lamps formerly used.

THE San Joaquin county assessor, who last year assessed the vines in bearing vineyards in good condition at \$50 per acre, is this year assessing on the following average basis: Vines planted one year, \$5 an acre; two years, \$25 an acre; three years and upward, from \$50 to \$75 an acre, according to the condition of the stock. Fruit trees planted one year, \$10 an acre; two years, \$20 to \$50 an acre; three years, \$75 to \$100 an acre.

In the River and Harbor bill this year California is specially fortunate. The committee recommends for Oakland harbor \$175,000; Redwood Creek, \$7400; Wilmington, \$90,000; San Diego, \$1000; San Luis Obispo, \$25,000; Humboldt, \$150,000; Mokelumne River, \$2000; Sacramento, \$20,000; San Joaquin, \$25,000; Petaluma Creek, \$2000; Napa Creek, \$7,500. About \$150,000 has also been appropriated for deep moorings in the roadsteads on the coast line north of San Francisco.

Dairy Improvements in Oregon.

Messrs. G. G. Wickson & Co. of San Francisco, who are the leading, and in fact only, firm on the Pacific Coast making a specialty of dairy improvement, have just taken a long lease of the premises No. 141 Front street, at the southwest corner of Alder street, Portland, which they are fitting up anew and especially to accommodate this, their Northwestern branch, and will carry in stock and on hand, to exhibit and sell, on the ground and not to order, as this trade has been compelled to buy heretofore, a full and most complete assortment of all the latest improved and most popular Eastern dairy machinery, apparatus and supplies.

The matter of putting creamery butter before the public in its proper light, and taking steps to prevent fraud and deception in its sale in the city, has received special attention by Messrs. Wickson & Co., and to enable them to bring this product up to the highest possible market value, and keep it pure and free from adulteration and contamination with inferior articles, the firm have built a fine cold storage in their store, and will act as city agents for the various creameries established and to be established in this section, and using their improved machinery; none other than creamery butter being handled by the firm, and to the elevation of this product alone all their attention will be devoted. The firm are now filling large contracts from several new creamery enterprises just starting up.—*Northwestern Farmer and Dairyman, Portland.*

Hog Cholera.

EDITORS PRESS:—I received four numbers of your valuable paper from a friend in California, and on page 23, of January 14, 1888, I noticed a piece entitled "Swine Pest." I wish to inform your readers that from the explanation given the disease is the genuine hog cholera. We of this section have had our hands full of it for years, and the only cure is to kill every hog as fast as you find one sick and bury them deep in the ground. Burn all old nests and put the well hogs on clean, fresh ground. There is no cure for the disease.—*DANIEL GUSEBERT, McClure, Henry Co., Ohio.*

MINDFUL AND HONORABLE.—About 30 years ago, says the *Haywards Journal* of the 24th, R. H. Blackwood farmed a tract of land adjoining that of the late Alex. Allen at San Lorenzo. He did not meet with success and at last gave up farming and moved away, owing considerable money. After an absence of 30 years he returned Tuesday, hunted up those he owed and paid them dollar for dollar. In inquiring around he found two of his old friends, whom he desired to pay, gone—J. B. Marlin and Alex. Allen. He paid the money to them all—Otis Hill \$600; Mrs. J. B. Marlin, \$240; Mrs. Alex. Allen, \$143. Two of the bills were for threshing and the last for groceries. Such an instance of honesty is well worth being recorded.

THE LOMB PRIZE ESSAYS.—We acknowledge the receipt of the Lomb Prize Essays, from the American Health Association of Concord, N. H. No. 1 is entitled *Healthy Homes and Foods for the Working Classes*; by Victor C. Vaughan, M. D., Ph. D. No. 2—*The Sanitary Condition and Necessities of School-Houses and School Life*; by D. F. Lincoln, M. D. No. 3—*Disinfection and Individual Prophylaxis against Infectious Diseases*; by Geo. M. Sternberg, M. D., U. S. Army. No. 4—*The Preventable Causes of Disease, Injury, and Death in American Manufactories and Workshops, and the Best Means and Appliances for Preventing and Avoiding Them*; by George Ireland.

Sweet Morsels.

"We like the *RURAL PRESS* very much, as the subscription in advance indicates."—*Mrs. J. M. B., San Jose.*

"I don't want it stopped so long as I can afford any paper at all."—*J. R. S.*

Who Is It?

Who sent us a postal note from Middletown, Lake county, without sending his name?

Who did the same thing from Selma, Fresno county, some time ago?

It is impossible to give proper credits unless people will send their names with the remittance. Let all subscribers take notice.

P. S.—If people wonder why their letters are not answered or the paper stopped when they omit the postage stamp on their letters, or misdirect them, or give them to parties who never mail them, whose fault is it?

AGRICULTURAL DIRECTORS.—The Governor has appointed agricultural directors as follows for District No. 3: William Hawkins of Butte, vice E. T. Reynolds, resigned; William M. Billups of Colusa, vice Frank Freeman, removed from the district.

American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

The Armour Packing Company.

In the Eastern States and in the great Mississippi valley the name of the Armour Packing Co. of Kansas City is a household word. In canned meats, pure lard, hams and bacon, they supply a large portion of the trade. They do business on a grand scale, and apply that skill in packing and canning meats that stamps their goods No. 1 in the market.

The combined packing of the Chicago and Kansas City houses foots up in round numbers about 1300 head of cattle and 5500 hogs daily, for every working day of the year.

Their goods find a market all over the world, and they have filled a single order for 5,000,000 pounds of canned beef. It is a national pride to know that foreign nations are paying tribute to the enterprise, thrift and sagacity of an American plant managed by American citizens who have seized the opportunity to become masters in this branch of the provision trade.

It is in keeping with the growth and development of our country for a few modest, unassuming citizens, bearing the name of "Armour," to create an enterprise in the center of the great Mississippi valley that takes the lead of any other packing-house in the world. It has been the policy and aim of the Armour Packing Co. to make a class of goods that should find a demand in every American home.

The system of canning meat for export and domestic use has grown in large proportions, and the growing demand for this class of goods in almost every household has engaged the attention of leading meat-packing companies to supply this want. The Armour Packing Co. makes a specialty of prepared meats, and their brand maintains the leading position in quality, and there is no establishment in the United States that equals it in quantity.

Mr. James McCullough, whose many years' experience in the provision trade has evidently qualified him to take the management of an enterprise of this character and magnitude, is the San Francisco representative of the Armour Packing Company.

The standard and excellent quality of their goods has become so well established that the affable agent from his office, No. 123 California street, fills orders for all distributing centers on the Pacific Coast, to meet the growing demand. Their business has assumed large proportions, running up into tens of thousands each month, and with their commercial advantages and the trade of the Northwest, extending to Sitka and "islands of the sea," this distributing agency will be one of great importance.
